### 2.1.1.3 Connecting to PLC

#### Configuring the PLC

Use the application **WinProLadder** (ver. 3.25) to configure the serial port of the PLC. Connect the PLC to a computer. In the application, under the **PLC** tab, select the **On-Line** option. In the dialog, select **RS232** for the Connection Name and press 'Edit'. Within the edit dialog, select the port number the PLC is connected to. Press OK to confirm the settings.

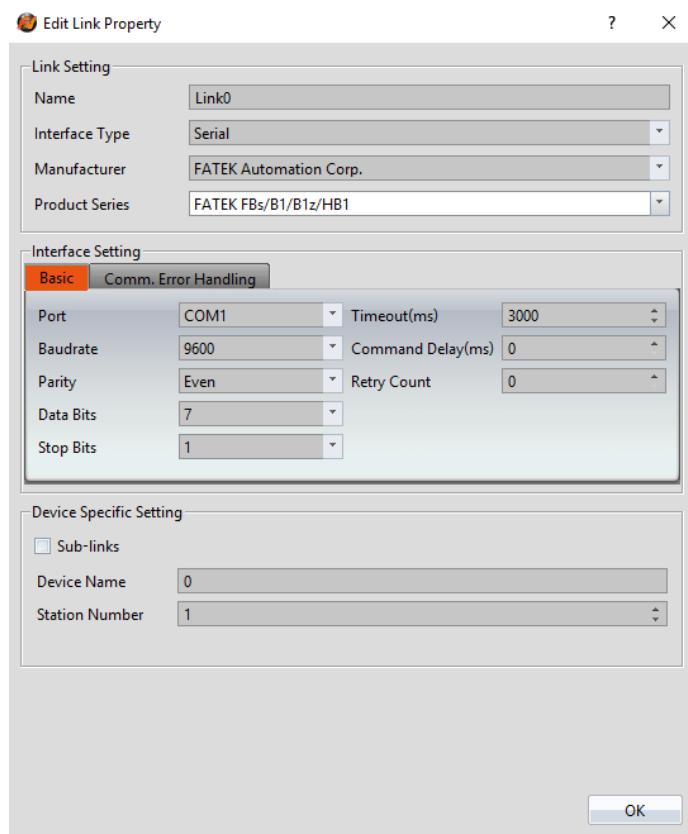

Under the **PLC** tab, select the **Setting** option and choose Port 0. Here, the Baud rate and other parameters of the serial port can be configured.

Note: For more detailed information please refer to the PLC manual.

## Connecting PLC to HMI

Within the **Link** configuration window in FvDesigner:

Under **Interface Type** select Serial

Under **Manufacturer** select FATEK Automation Corp

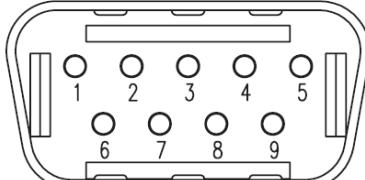

Under **Product Series** select FATEK FBs/B1/B1z/HB1

Under **Port** select COM1

Verify the other parameters are consistent with the settings on the PLC.

### 2.1.2.3 Connecting to HMI

#### Configuring IP Address on PLC

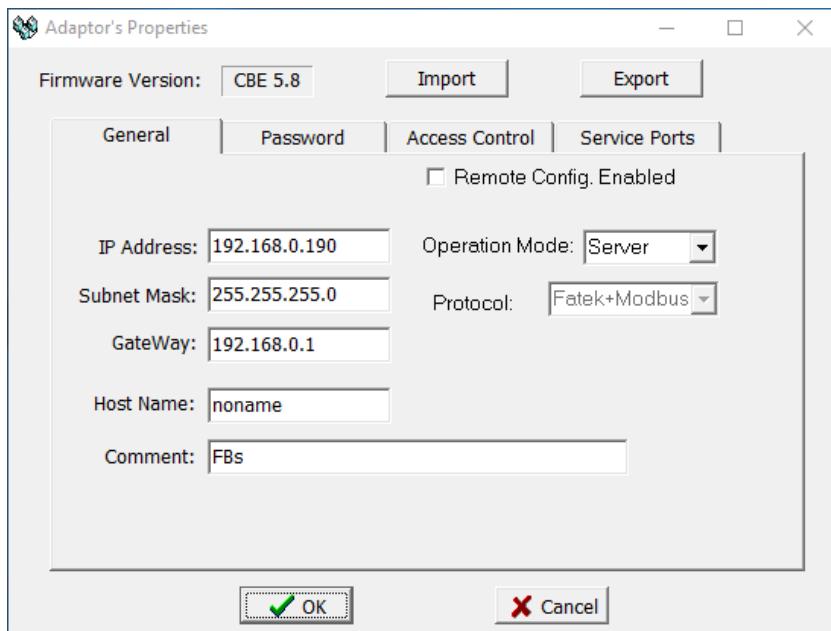

Use the application **FATEK Ethernet Module Configuration Tool** to configure the IP address of the PLC. Connect an Ethernet cable to the PLC. Under **Attached Media**, select LAN and press scan.

Select the PLC to connect to and right click or press Properties to change the IP.

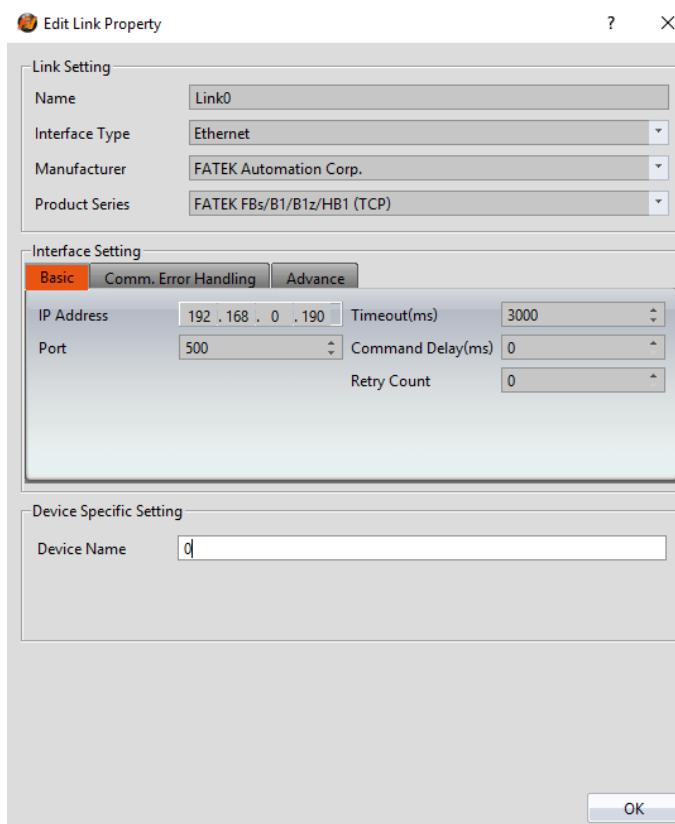

Note: The default IP address for the PLC has 1 for its third octet. If the IP address of the computer has a different number at that position, the PLC will not show up in the scan. Configure network settings on the computer to be able to see the PLC in the local network.

In the dialog window, the IP address and other parameters of the PLC can be configured. In the **Service Ports** tab, the port number of the PLC can be changed.

Note: For more detailed information please refer to the PLC manual.

### Connecting PLC to HMI

Within the **Link** configuration window in FvDesigner:

Under **Interface Type** select Ethernet

Under **Manufacturer** select FATEK Automation Corp

Under **Product Series** select FATEK FBs/B1/B1z/HB1 (TCP)

Use the IP address and port number assigned on the PLC

### 2.1.3 FBs/B1/B1z/HB1 (UDP)

#### 2.1.3.1 Communication Setting

Item	Default Settings	Remark
Signal Level	Ethernet	
Internet Protocol	192.168.1.100	
Port	500	
PLC Station No.	0	
Communication Method	UDP	

#### 2.1.3.2 Memory Resource Review

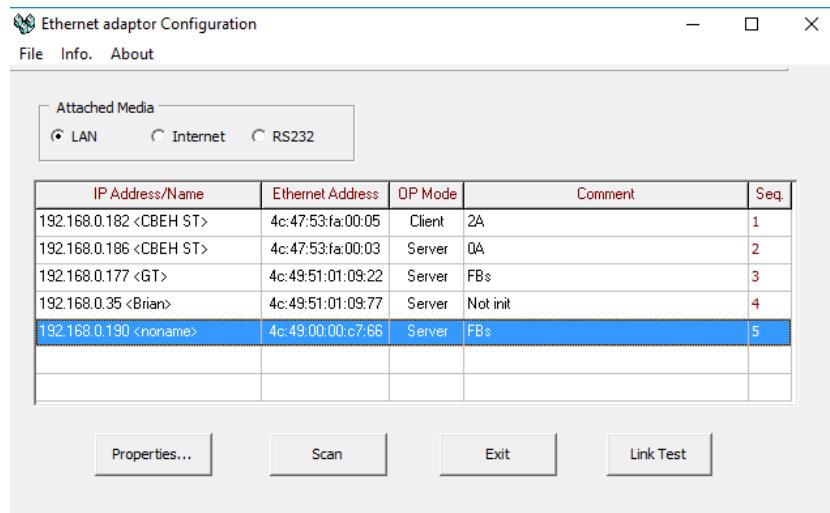

Device	Data Bits	Address Format	Min.	Max.	Description
X	1	DDDD	0	255	Input Discrete
Y	1	DDDD	0	255	Output Relay
M	1	DDDD	0	2001	Internal Relay
S	1	DDDD	0	999	Step Relay
T	1	DDDD	0	255	Timer Discrete
C	1	DDDD	0	255	Counter Discrete

RC	16	DDDD	0	199	Counter Register
DRC	32	DDDD	200	255	Counter Register
R	16	DDDD	0	8071	Data Register
D	16	DDDD	0	4095	Data Register
F	16	DDDD	0	8191	File Register

#### 2.1.3.3 Connecting to HMI

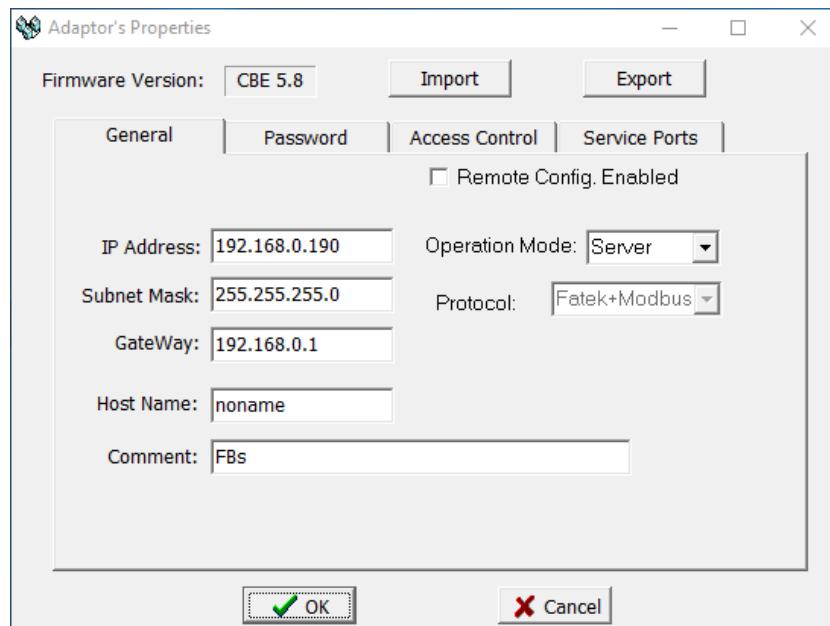

##### Configuring IP Address on PLC

Use the application **FATEK Ethernet Module Configuration Tool** to configure the IP

address of the PLC. Connect an Ethernet cable to the PLC. Under **Attached Media**, select LAN and press scan.

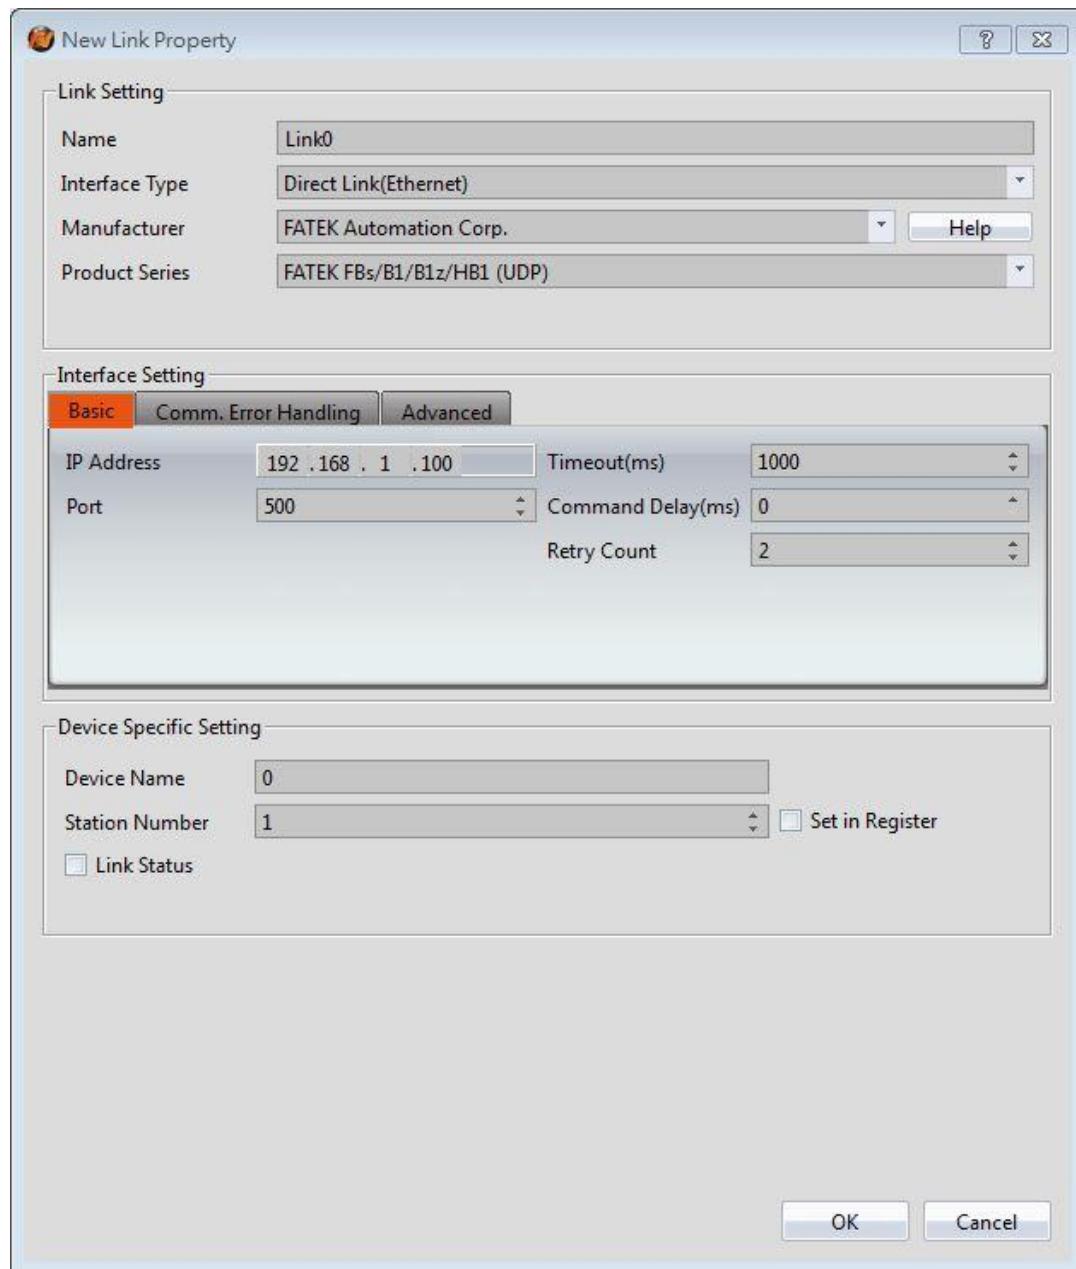

In the dialog window, the IP address and other parameters of the PLC can be configured.

Note: For more detailed information please refer to the PLC manual.

### Connecting PLC to HMI

Within the **Link** configuration window in FvDesigner:

Under **Interface Type** select Ethernet

Under **Manufacturer** select FATEK Automation Corp

Under **Product Series** select FATEK FBe (UDP)

Use the IP address assigned on the PLC

Leave the Port at the default value

## 2.1.4 FBe

### 2.1.4.1 Communication Setting

Item	Default Setting	Remark
Signal Level	RS232 / RS485	
Baud Rate	9600	
Data Length	7	
Stop Bit	1	
Parity	Even	
PLC Station No.	1	Must match PLC port setting
Communication Method	FATEK Communication Protocol	

### 2.1.4.2 Memory Resource Review

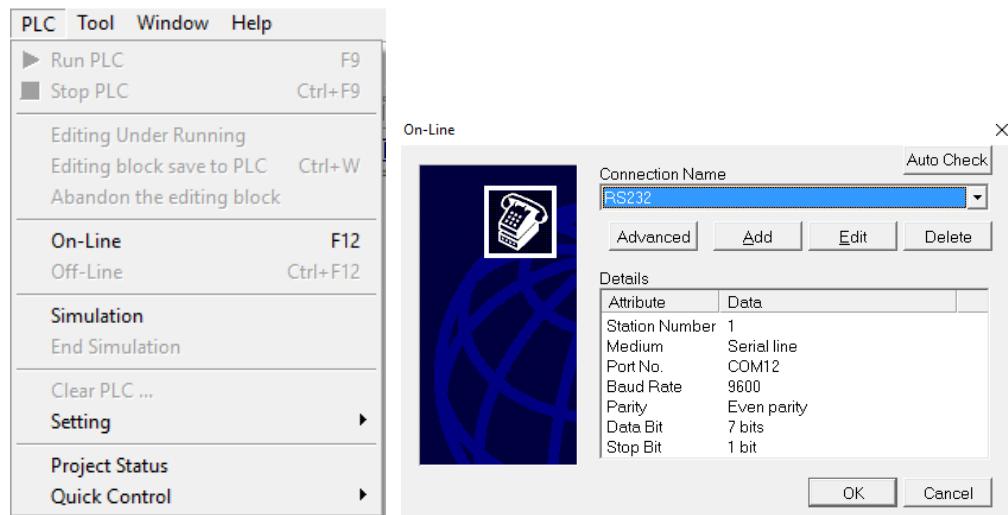

Device	Data Bits	Address Format	Min.	Max.	Description
X	1	DDDD	0	255	Input Discrete
Y	1	DDDD	0	255	Output Relay
M	1	DDDD	0	2001	Internal Relay
S	1	DDDD	0	999	Step Relay
T	1	DDDD	0	255	Timer Discrete
C	1	DDDD	0	255	Counter Discrete
WX	16	DDDD	0	255	Input Discrete
WY	16	DDDD	0	255	Output Relay

R	16	DDDD	0	8071	Data Register
D	16	DDDD	0	4095	Data Register

### 2.1.4.3 Connecting to PLC

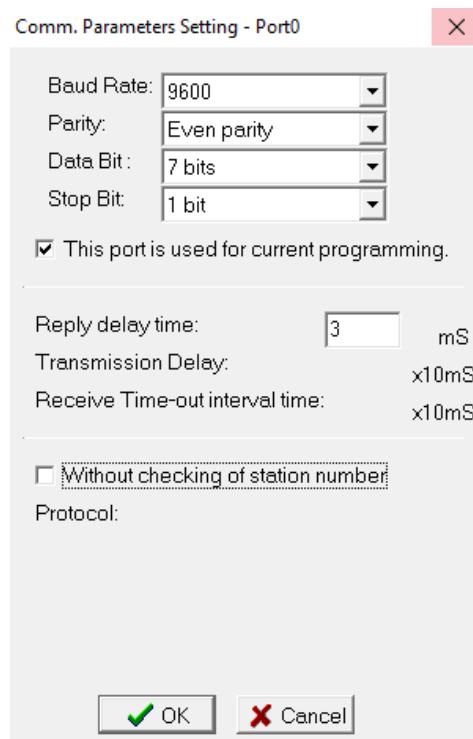

#### Configuring the PLC

Use the application **WinProLadder** (ver. 3.25) to configure the serial port of the PLC. Connect the PLC to a computer. In the application, under the **PLC** tab, select the **On-**

**Line** option. In the dialog, select **RS232** for the Connection Name and press ‘Edit’. Within the edit dialog, select the port number the PLC is connected to. Press OK to confirm the settings.

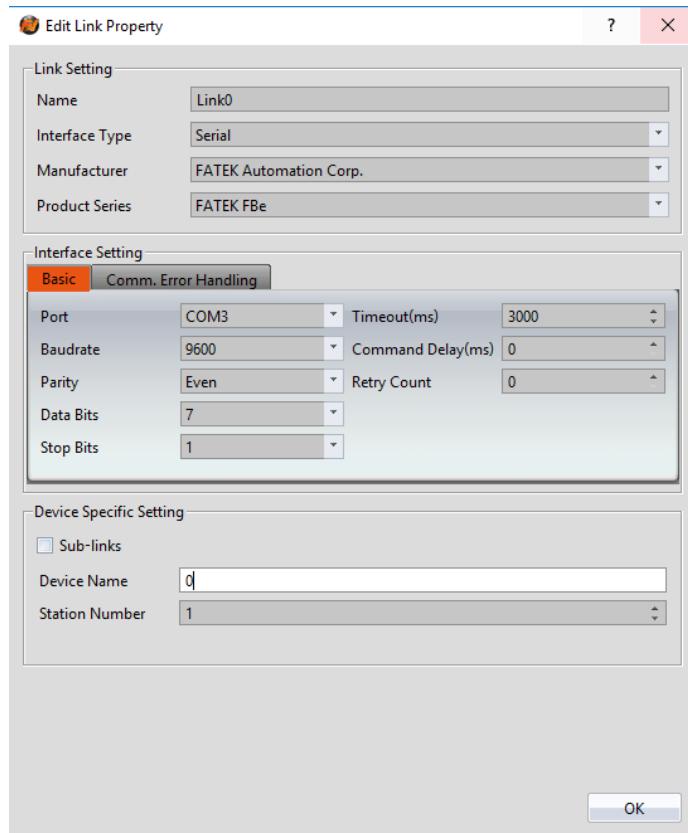

Under the **PLC** tab, select the **Setting** option and choose Port 0. Here, the Baud rate and other parameters of the serial port can be configured.

Note: For more detailed information please refer to the PLC manual.

### Connecting PLC to HMI

Within the **Link** configuration window in FvDesigner:

Under **Interface Type** select Serial

Under **Manufacturer** select FATEK Automation Corp.

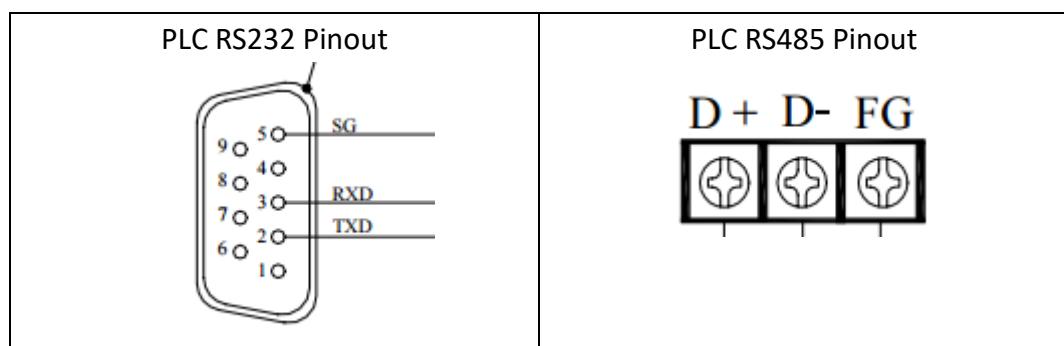

Under **Product Series** select FATEK FBe

Under **Port** select the port corresponding to the connection to the PLC

Verify the other parameters are consistent with the settings on the PLC

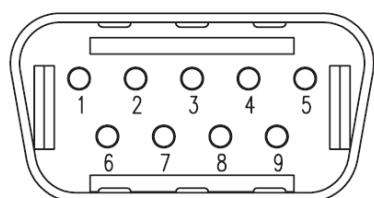

#### 2.1.4.4 Wiring Diagrams

D	16	DDDD	0	4095	Data Register

### 2.1.5.3 Connecting to HMI

#### Configuring IP Address on PLC

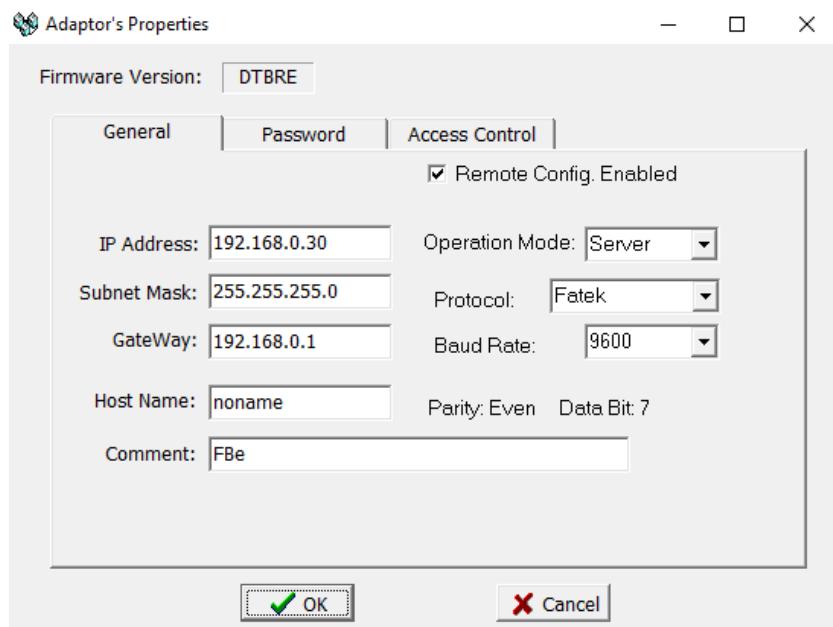

Use the application **FATEK Ethernet Module Configuration Tool** to configure the IP address of the PLC. Connect an Ethernet cable to the PLC. Under **Attached Media**, select LAN and press scan.

Select the PLC to connect to and right click or press Properties to change the IP.

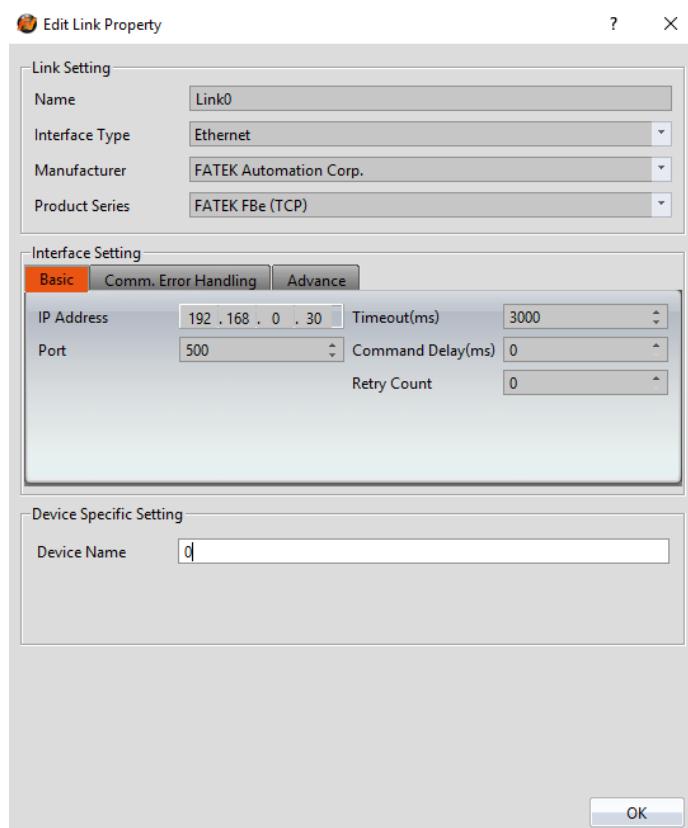

Note: The default IP address for the PLC has 1 for its third octet. If the IP address of the computer has a different number at that position, the PLC will not show up in the scan. Configure network settings on the computer to be able to see the PLC in the local network.

In the dialog window, the IP address and other parameters of the PLC can be configured.

Note: For more detailed information please refer to the PLC manual.

### Connecting PLC to HMI

Within the **Link** configuration window in FvDesigner:

Under **Interface Type** select Ethernet

Under **Manufacturer** select FATEK Automation Corp

Under **Product Series** select FATEK FBe (TCP)

Use the IP address assigned on the PLC

Leave the Port at the default value

### 2.1.6 SD3 Servo

#### 2.1.6.1 Communication Setting

ITEMS	SPEC
Electrical specifications	Asynchronous serial communication half duplex
Baud rate	2400,4800,9600,19200,38400,57600bps
Data bit	8 bit
Parity bit	None even odd
Stop bit	1bit 2bit
Check sum	CRC16-CCITT
Data transfer	8 bit (binary)
Communication data length	32 bytes

#### 2.1.6.2 Memory Resource Review

Bit/ Word	Device Name	Register symbol	Input format	Start	End	Read/ Write
B	Alarm Status	A	D	0	0	R
W	Parameter	P	DDDD	0	1029	R/W
	State	S	DDDD	0	1029	R
	Multi-Turn Data	MTD	D	0	0	R
	Alarm Status	A	D	0	0	R
DW	Parameter	DP	DDDD	0	1029	R/W
	State	DS	DDDD	0	1029	R
	Single-Turn Data	STD	D	0	0	R

#### 2.1.6.3 Connecting to HMI

##### Sankyo Servo Parameter configuration

With the upper control device specifications, set the drive communication address and communication parameters. The following are the parameters that must be set for RS-485.

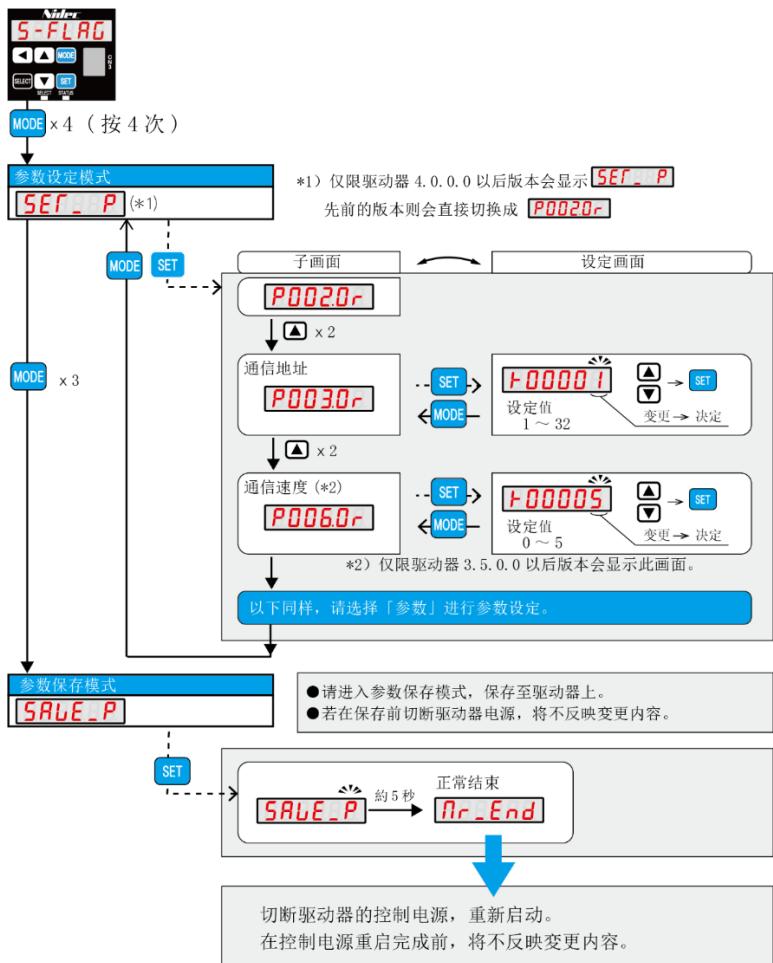

Parameter No.	parameter	Setting value
4. 0	RS-485 communication address	1~32 Initial value 1。
6. 0	RS-485 communication Baud rate	0 : 2,400bps 1 : 4,800bps 2 : 9,600bps 3 : 19,200bps 4 : 38,400bps 5 : 57,600bps (Initial value)
6. 1	RS-485 communication STOP bit	0 : 1 bit (Initial value) 1 : 2 bit
6. 2	RS-485 communication parity	0 : none (Initial value) 1 : EVEN 2 : ODD
8. 0	RS-485 communication ON/OFF	0 : no use (Initial value) 1 : use
11. 0	RS-485 Communication Minimum response time	0~255 Initial value 3 [ms]。

#### 2.1.6.4 Wiring Diagrams

Parameter setting method (alternatively set the following parameters):

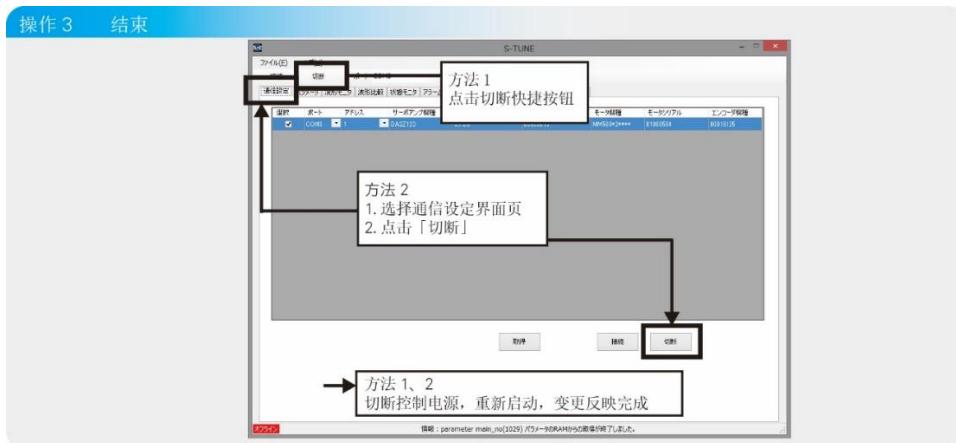

參數設定方法	
	Use the drive front panel settings.
	S-TUNE has been set for adjustment. Software needs to be installed on the computer.

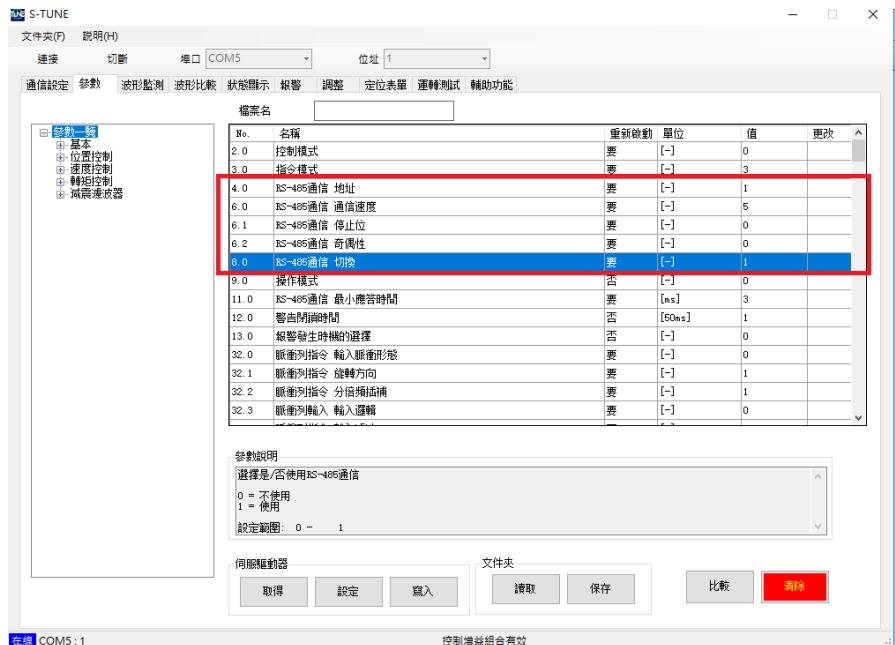

Method1:

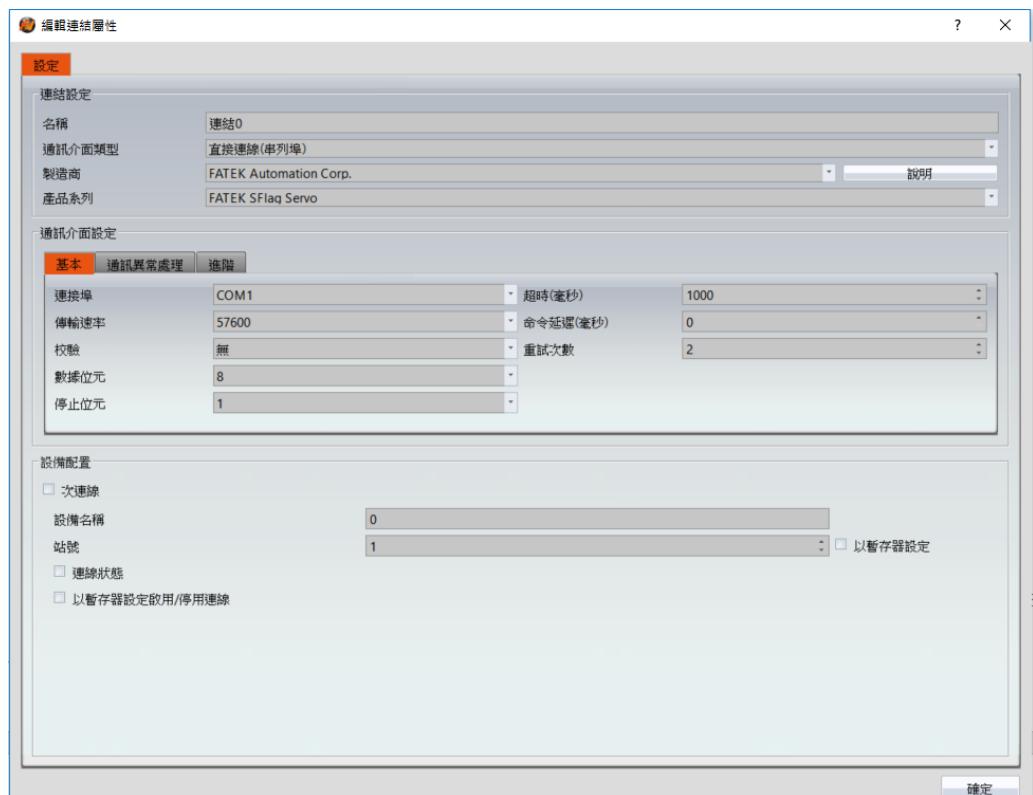

### Method2:

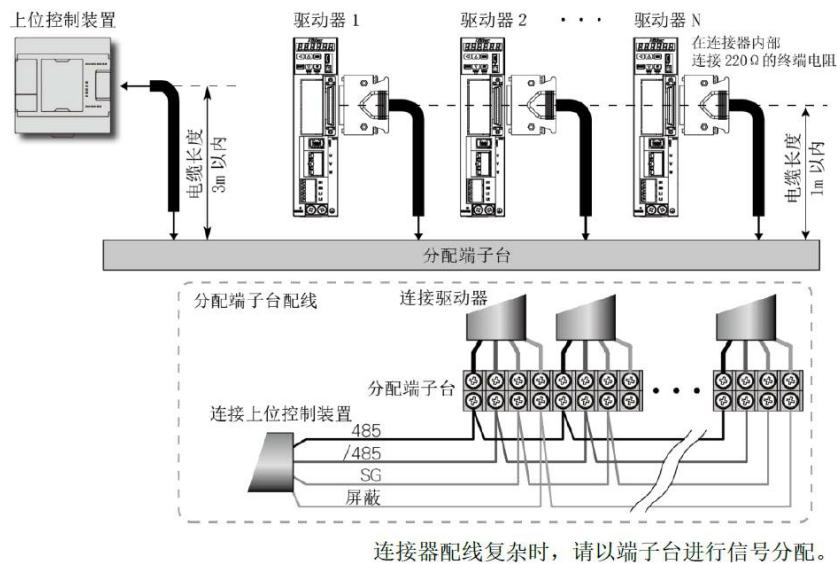

Open Sankyo S-TUNE and use the mini USB cable to connect to the computer USB port, it will automatically connect

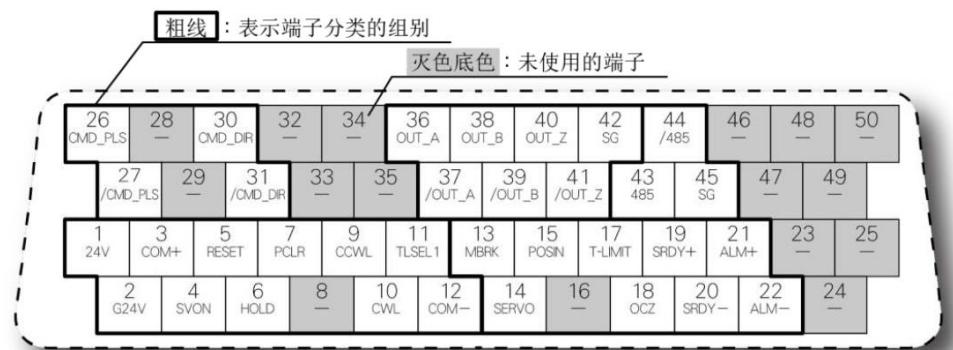

## HMI 設定

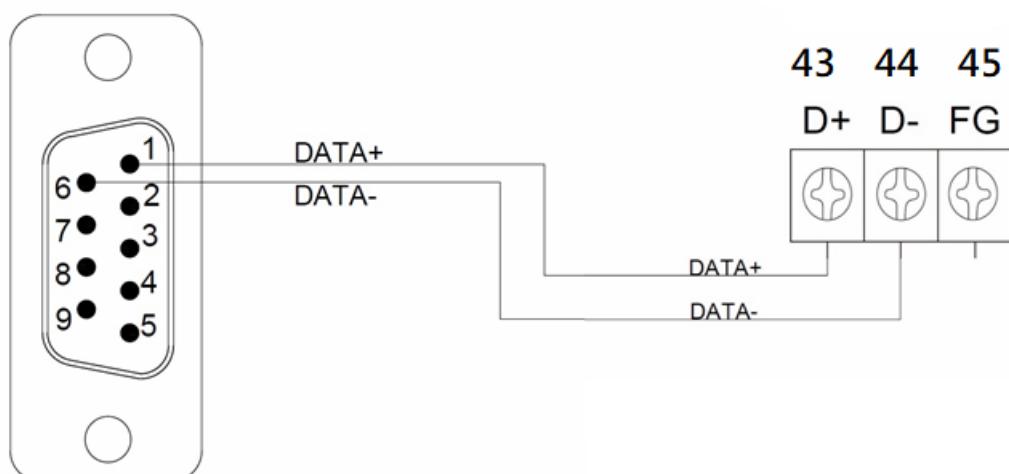

连接器配线复杂时, 请以端子台进行信号分配。

Sankyo Servo CN1  
HMI COM2 PIN腳位

## 2.1.7 M series

### 2.1.7.1 Communication Setting

Item	Default Setting	Remark
Signal Level	RS485

### 2.1.7.3 Connecting to PLC

#### Configuring the PLC

Use the PLC software "Upelogic" to configure the serial port communication parameters of the PLC. After connecting to the device via "USB" or "Ethernet," select the "Communication Settings" option to set the corresponding communication parameters.

#### Connecting PLC to HMI

Within the Link configuration window in FvDesigner:

Under Interface Type select **Serial**.

Under Manufacturer select **FATEK Automation Corp.**

Under Product Series select **FATEK M Series**.

Verify the other parameters are consistent with the settings on the PLC.

#### 2.1.8.3 Connecting to PLC

##### Configuring the PLC

Use the PLC software "**Upelogic**" to configure the serial port communication parameters of the PLC. After connecting to the device via "USB" or "Ethernet," select the "Communication Settings" option to set the corresponding communication parameters.

##### Connecting PLC to HMI

Within the Link configuration window in FvDesigner:

Under Interface Type select **Direct Link (Ethernet)**.

Under Manufacturer select **FATEK Automation Corp.**.

Under Product Series select **FATEK M Series (TCP)**.

Verify the other parameters are consistent with the settings on the PLC.

### 2.2.2.3 Connecting to HMI

#### Configuring the PLC

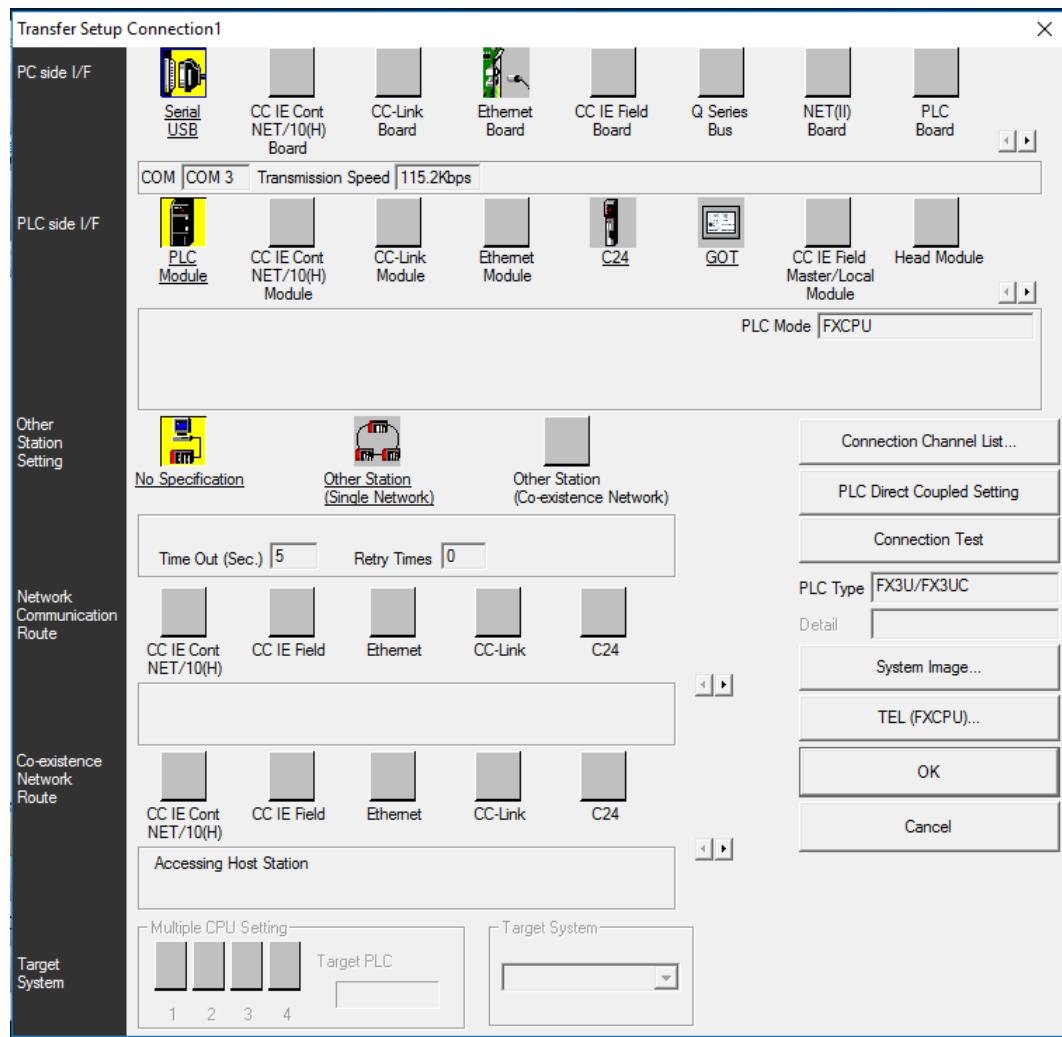

Use **MELSOFT GX Works2** to configure the port of the PLC.

Under the **Online** menu option, select **Read from PLC**

Select the **FXCPU** PLC series.

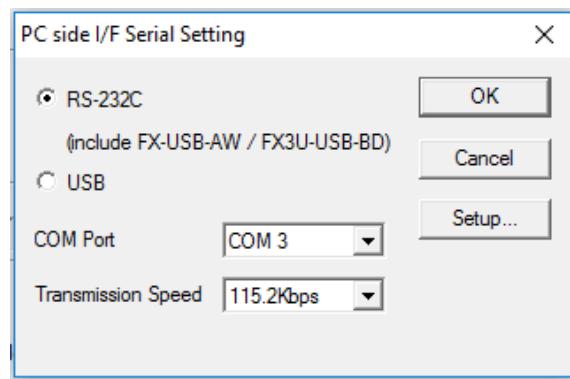

Select **Serial USB** in the Transfer Setup Communication window.

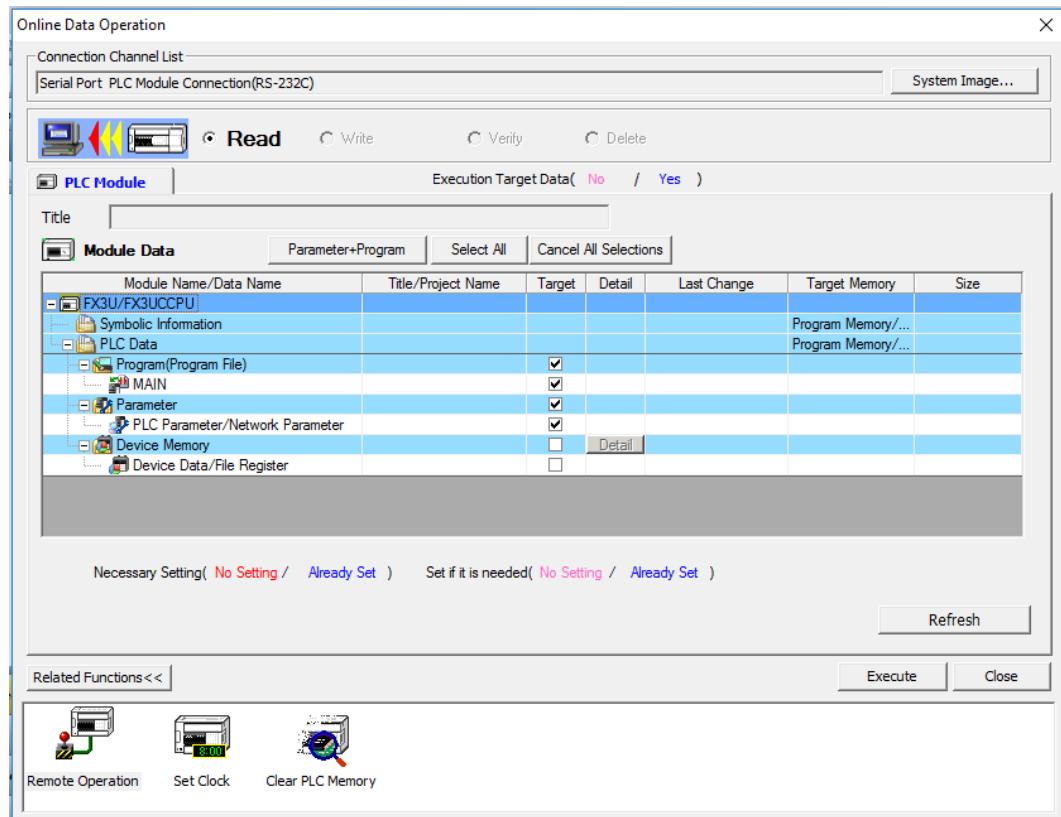

Select the **RS-232C** radio button and select the **COM Port** that the PLC is connected at.

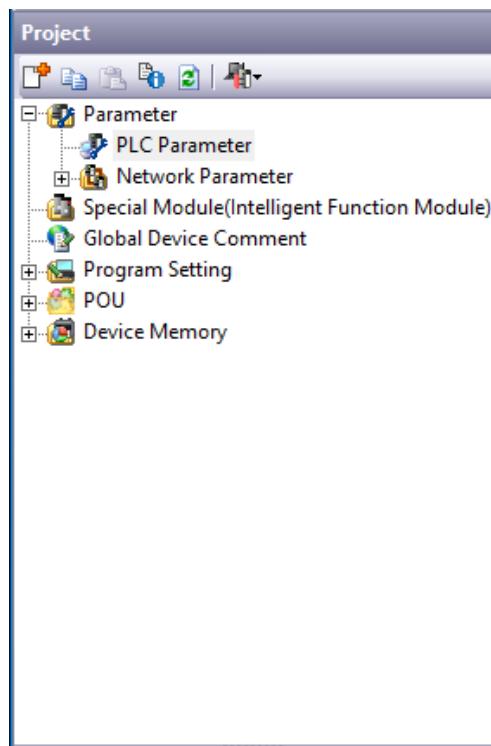

Click **Connection Test** to verify the connection and then press **OK**.

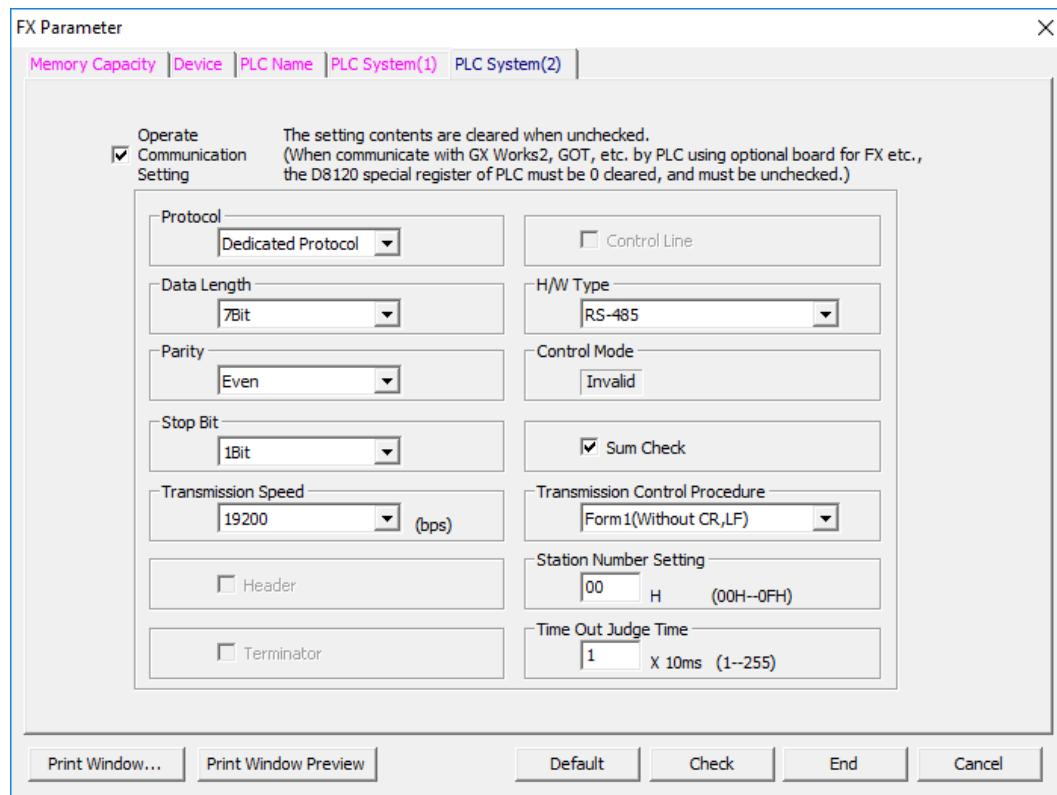

After confirming the **Parameter** option is checked, press **Execute** in the Online Data Operation window.

Under the Project Sidebar, expand **Parameter** and select **PLC Parameter**.

Navigate to the **PLC System(2)** tab and configure it to the settings detailed below.

Check **Operate Communication Setting** to enable configuration

Set Protocol to **Dedicated Protocol**

Set Parity to **Even**

Set Transmission Speed to **19200**

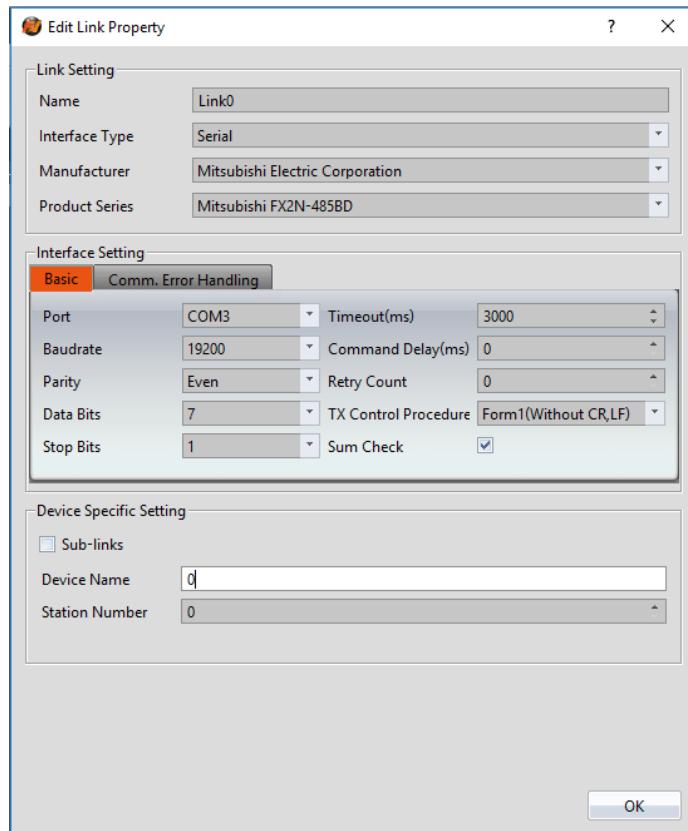

Set H/W Type to **RS-485**

Check the **Sum Check** checkbox

Verify the Station Number is consistent with the one set in FvDesigner.

Note: For more detailed information please refer to the PLC manual.

### **Connecting PLC to HMI**

Within the **Link** configuration window in FvDesigner:

Under **Interface Type** select **Serial**

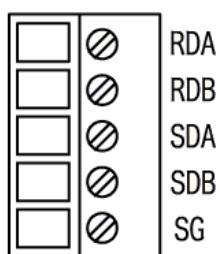

Under **Manufacturer** select **Mitsubishi Electric Corporation**

Under **Product Series** select **Mitsubishi FX2N-485BD**.

Under **Port** select **COM3**

#### 2.2.5.3 Connecting to HMI

##### Configuring IP Address on PLC

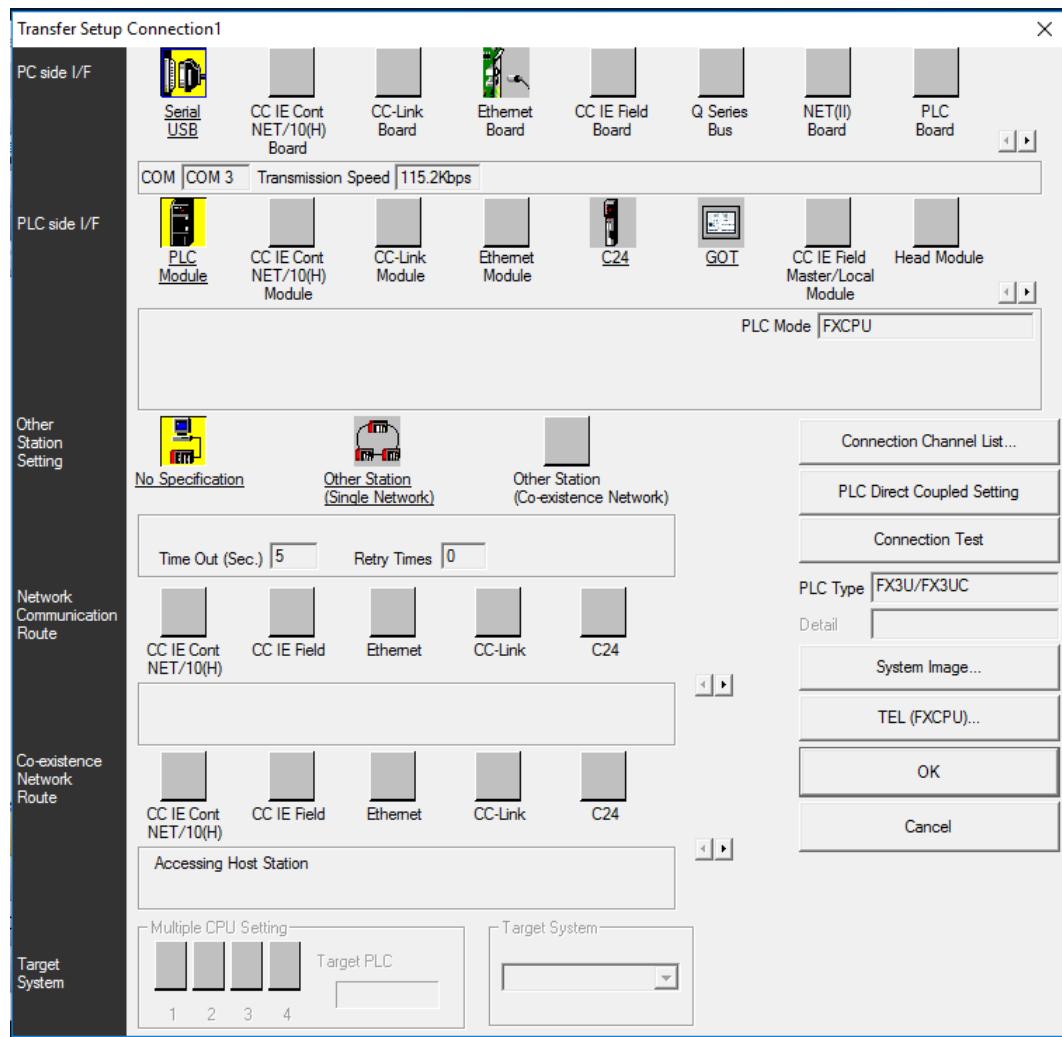

Use **MELSOFT GX Works2** to configure the IP address of the PLC.

Under the **Online** menu option, select **Read from PLC**

Select the **FXCPU** PLC series.

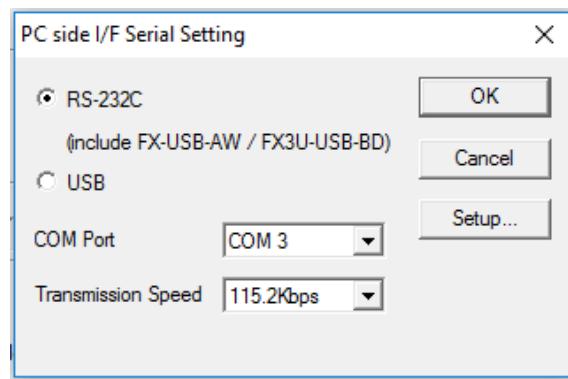

Select **Serial USB** in the Transfer Setup Communication window.

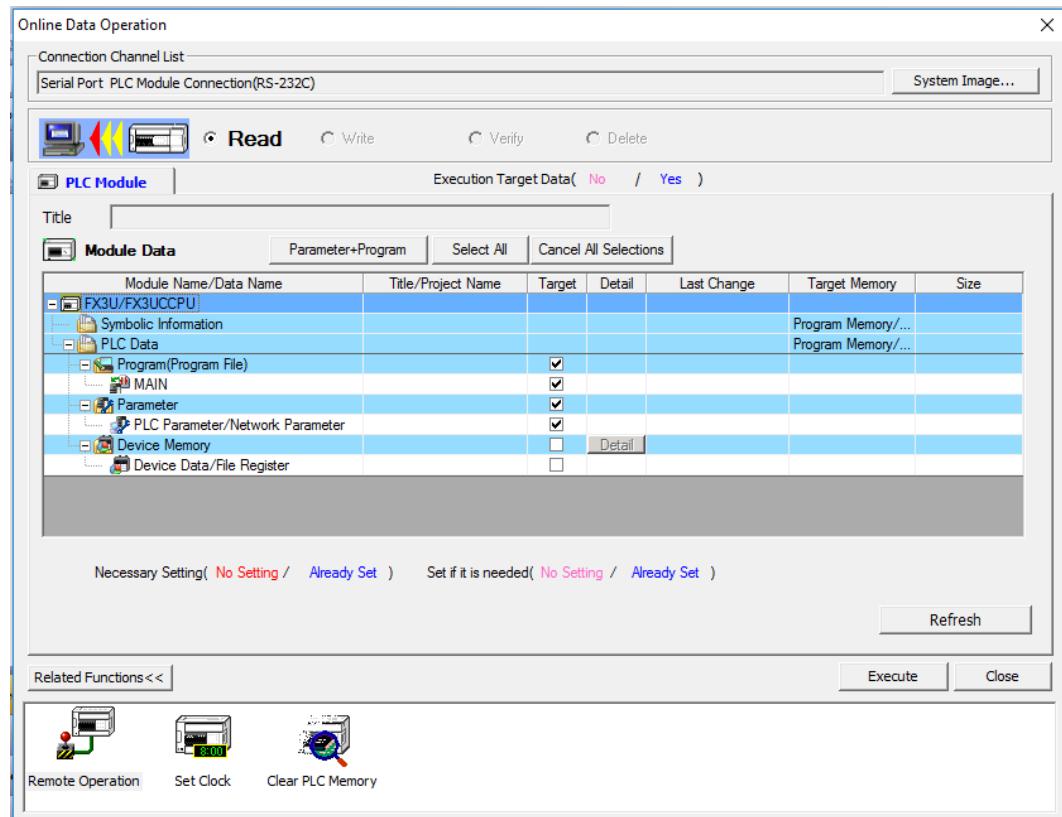

Select the **RS-232C** radio button and select the **COM Port** that the PLC is connected at.

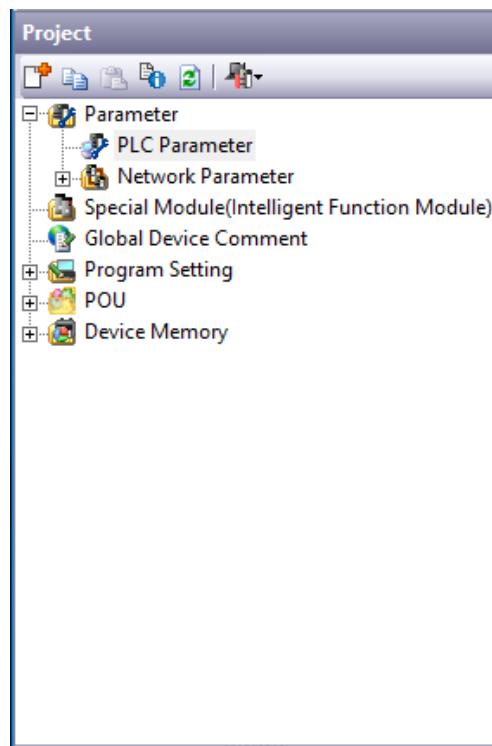

Click **Connection Test** to verify the connection and then press **OK**.

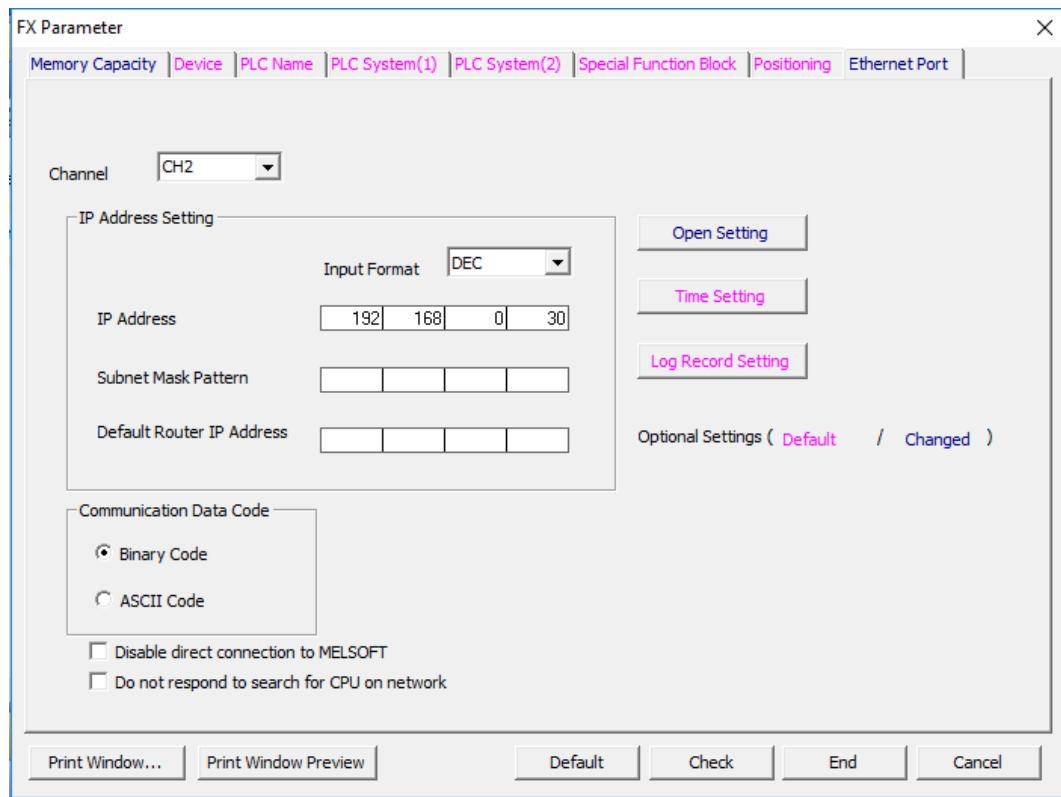

After confirming the **Parameter** option is checked, press **Execute** in the Online Data Operation window.

Under the Project Sidebar, expand **Parameter** and select **PLC Parameter**.

In the **Ethernet Port** tab, set an open IP address.

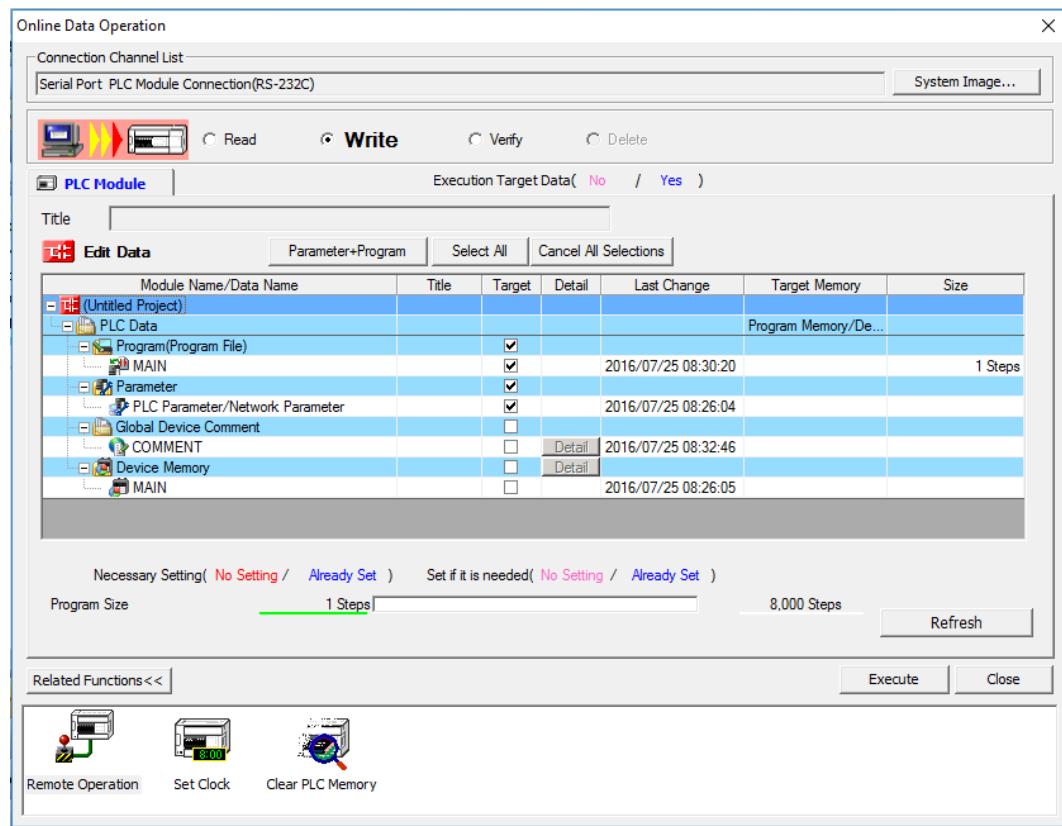

Click **Open Setting** and set the entire **Open System** column to **MC Protocol**. For the **Host Station Port No.**, set row 1 to 5001, row 2 to 5002 and so on.

Ethernet Port Open Setting					
	Protocol	Open System	Host Station Port No.	Destination IP Address	Destination Port No.
1	TCP	MC Protocol	5001		
2	TCP	MC Protocol	5002		
3	TCP	MC Protocol	5003		
4	TCP	MC Protocol	5004		

Input decimal value for the Host Station Port No., Destination IP Address and Destination Port No..

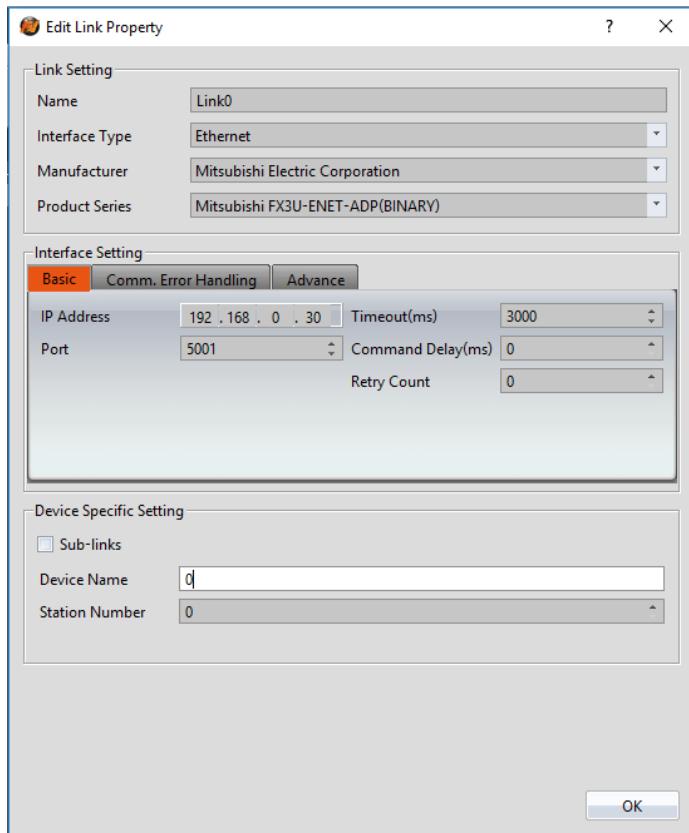

**End**      **Cancel**

Under the **Online** menu option, select **Write to PLC** to save the settings to the PLC. Press **Execute** in the Online Data Operation window.

Note: For more detailed information please refer to the PLC manual.

### Connecting PLC to HMI

Within the **Link** configuration window in FvDesigner:

Under **Interface Type** select Ethernet

Under **Manufacturer** select Mitsubishi Electric Corporation

Under **Product Series** select one of the Mitsubishi FX3U-ENET-ADP options. The last part of the series name (BINARY or ASCII) should be consistent with the Connection Data Code set in the Ethernet Port for the PLC.

Enter the **IP Address** that was written into the PLC.

Enter 5001 for the Port.

### 2.2.6.3 Connecting to HMI

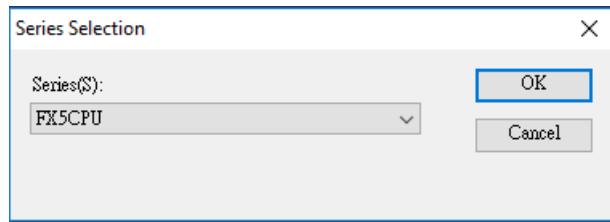

#### Configuring the PLC

Connect the PLC using an Ethernet cable. The following setup uses an Ethernet Port Direct Connection to configure the PLC.

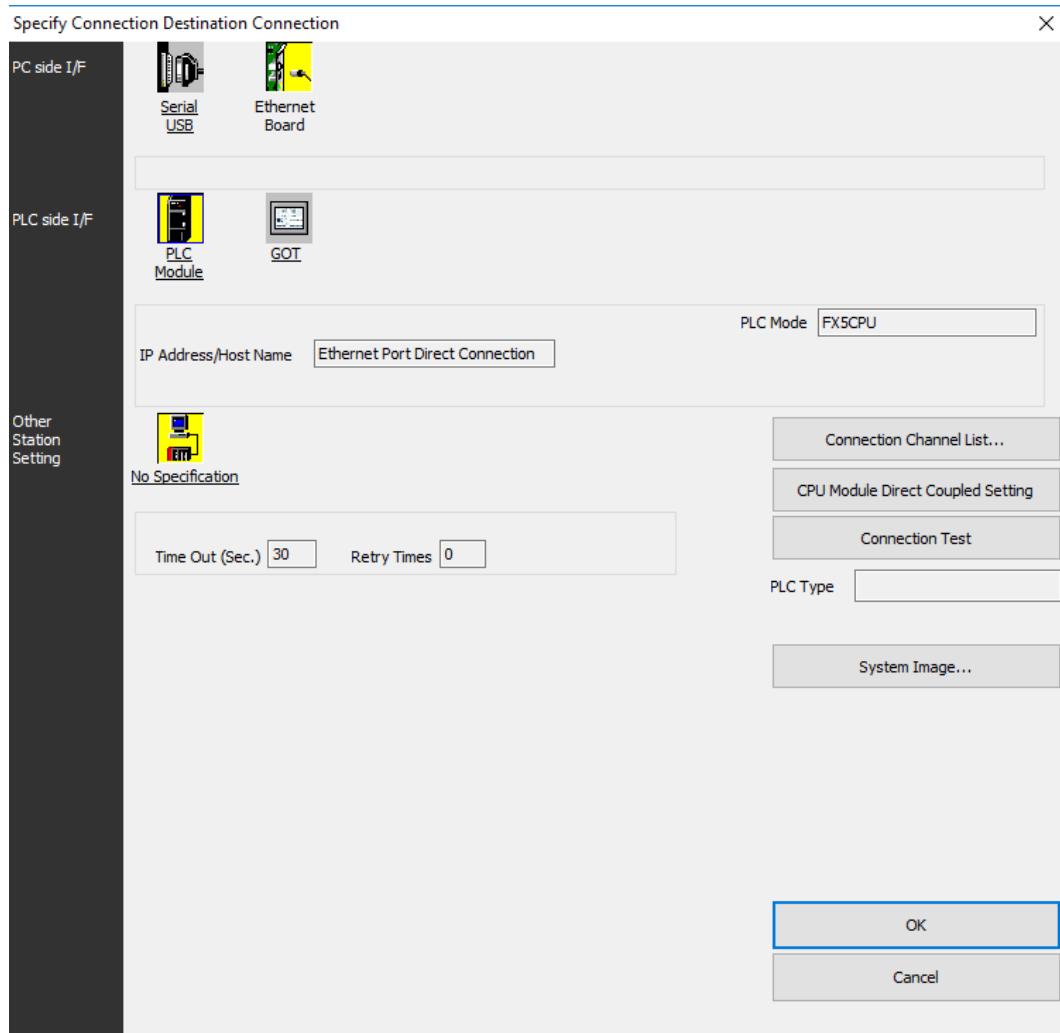

Use **MELSOFT GX Works3** to configure the port of the PLC.

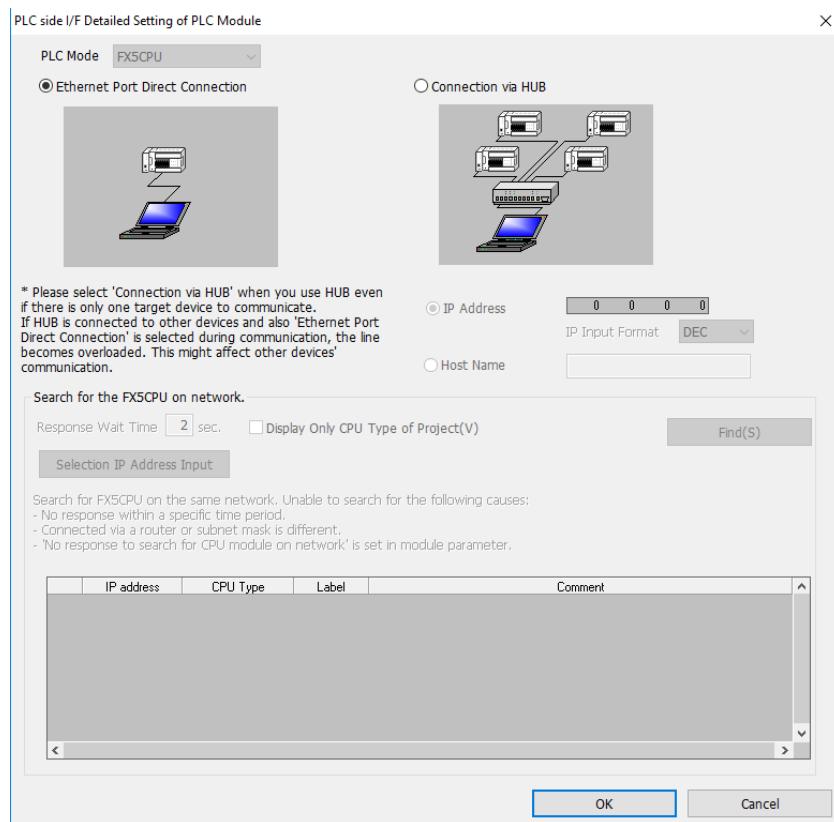

Under the **Online** menu option, select **Read from PLC**.

Select the **FX5CPU** option for the Series.

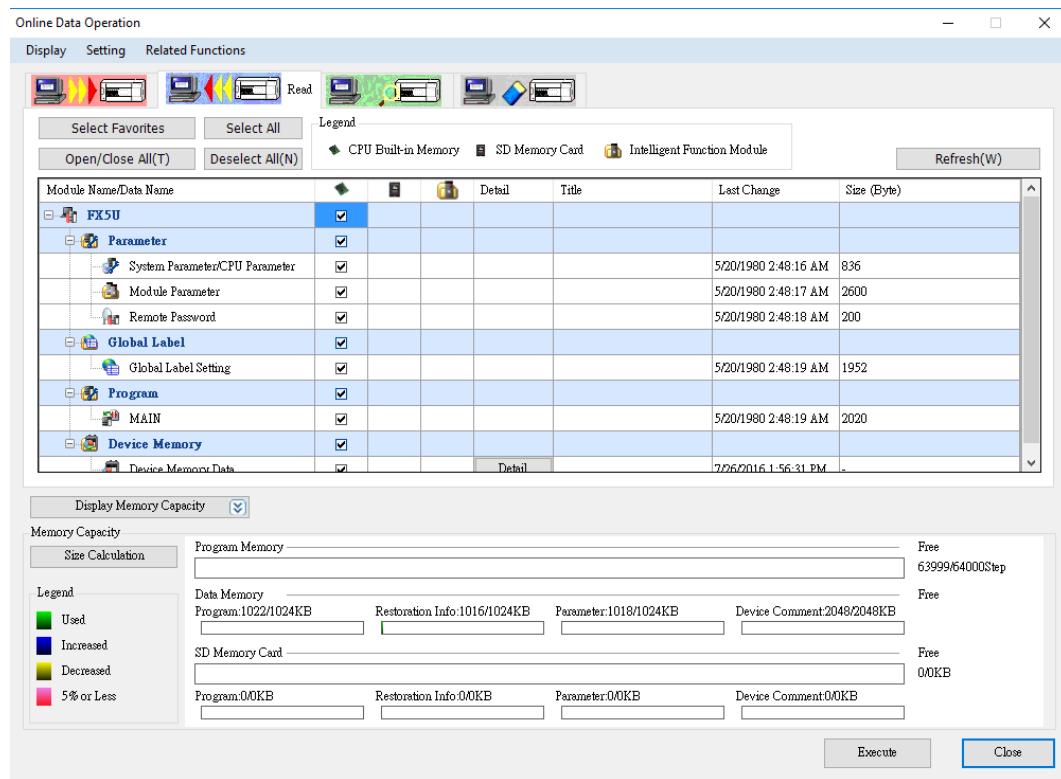

In the connection window, select **Ethernet Board**. Click **PLC Module** and in the dialog window, select the **Ethernet Port Direct Connection** radio button.

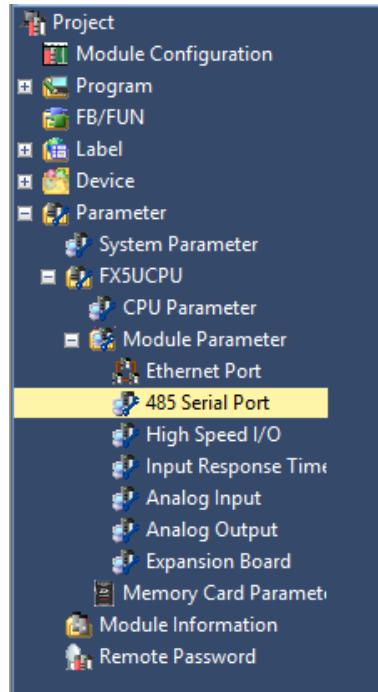

**Click Connection Test** to verify the connection and then press **OK**.

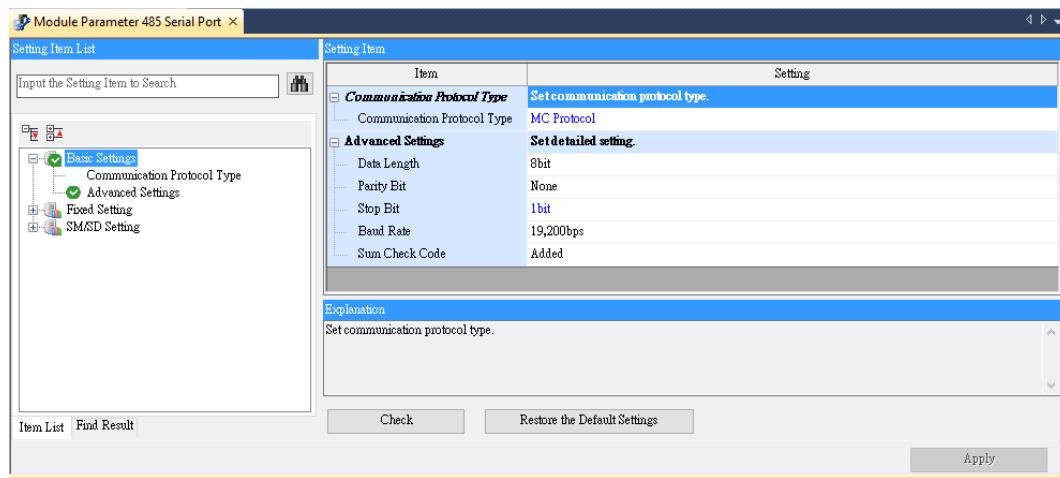

**Click Select All** in the Online Data Operation window and press **Execute**. Allow the read to finish.

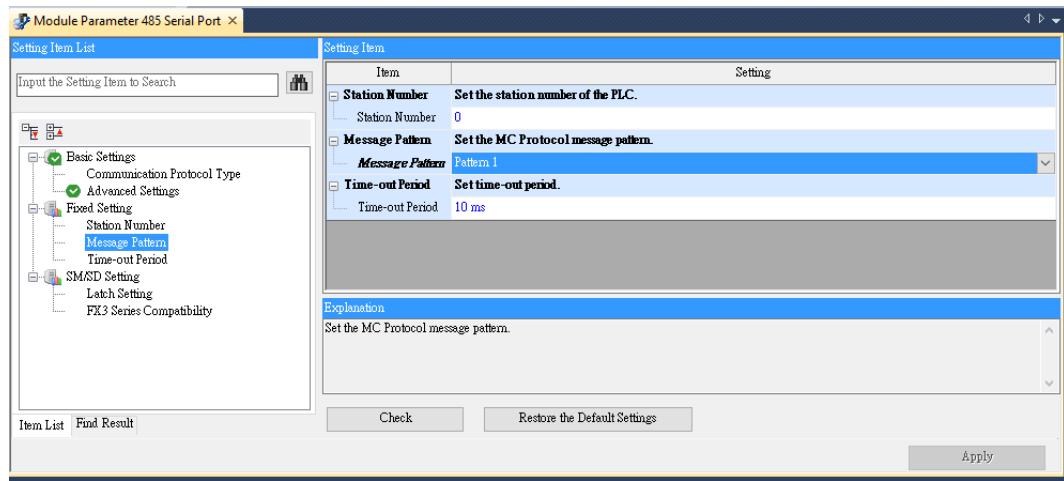

In the **Project** sidebar, expand **Parameter**, **FX5UCPU**, and **Module Parameter** and select **485 Serial Port**.

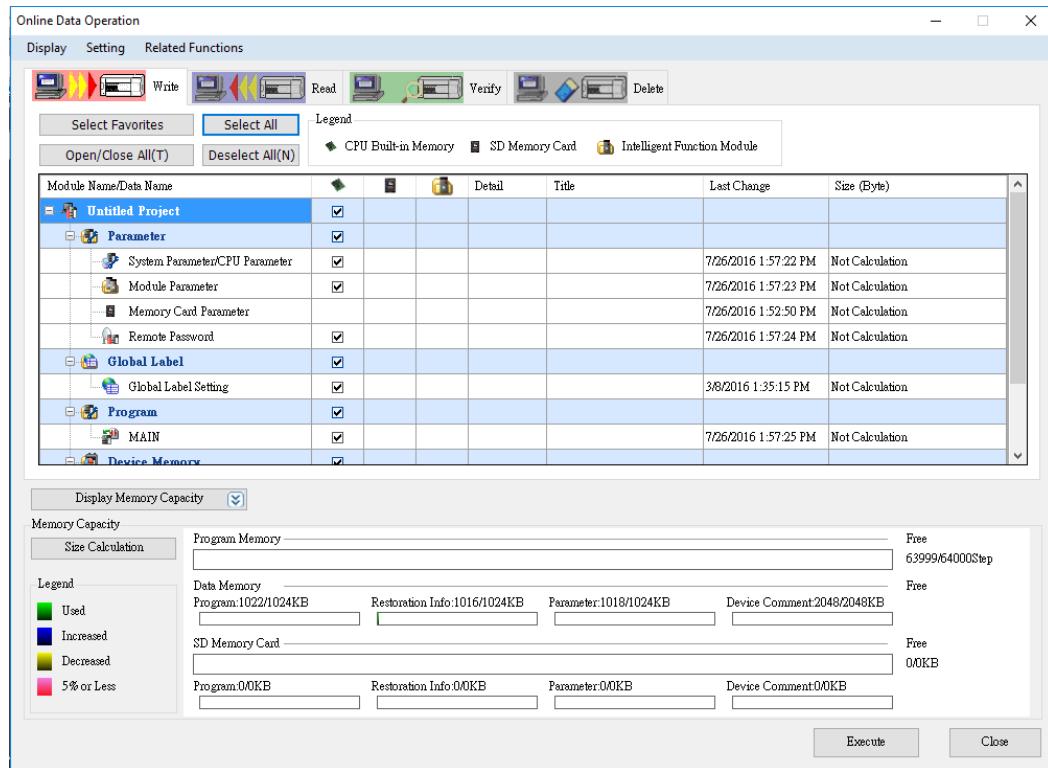

Under Basic Settings, change **Communication Protocol Type** to MC Protocol.

Under Fixed Setting, change **Message Pattern** to Pattern 1 and verify the station number is consistent with the one set in FvDesigner.

Under the **Online** menu option, select **Write to PLC** to save the settings to the PLC.  
 Click **Select All** and press **Execute** in the Online Data Operation window.

Note: For more detailed information please refer to the PLC manual.

### Connecting PLC to HMI

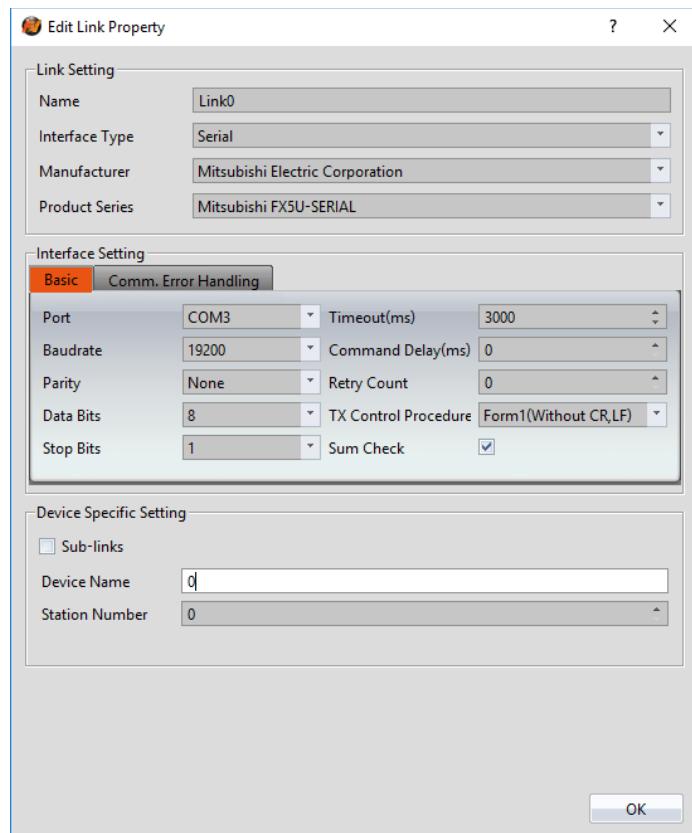

Within the **Link** configuration window in FvDesigner:

Under **Interface Type** select **Serial**

Under **Manufacturer** select **Mitsubishi Electric Corporation**

Under **Product Series** select **Mitsubishi FX5U-SERIAL**.

Verify the parameters match the window above.

### 2.2.7.3 Connecting to HMI

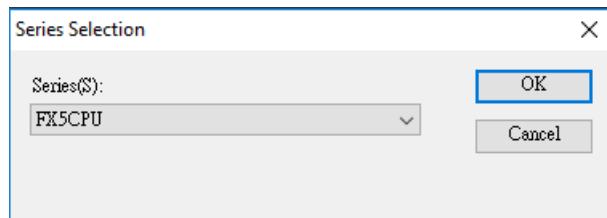

#### Configuring IP Address on PLC

Connect the PLC using an Ethernet cable. The following setup uses an Ethernet Port Direct Connection to configure the PLC.

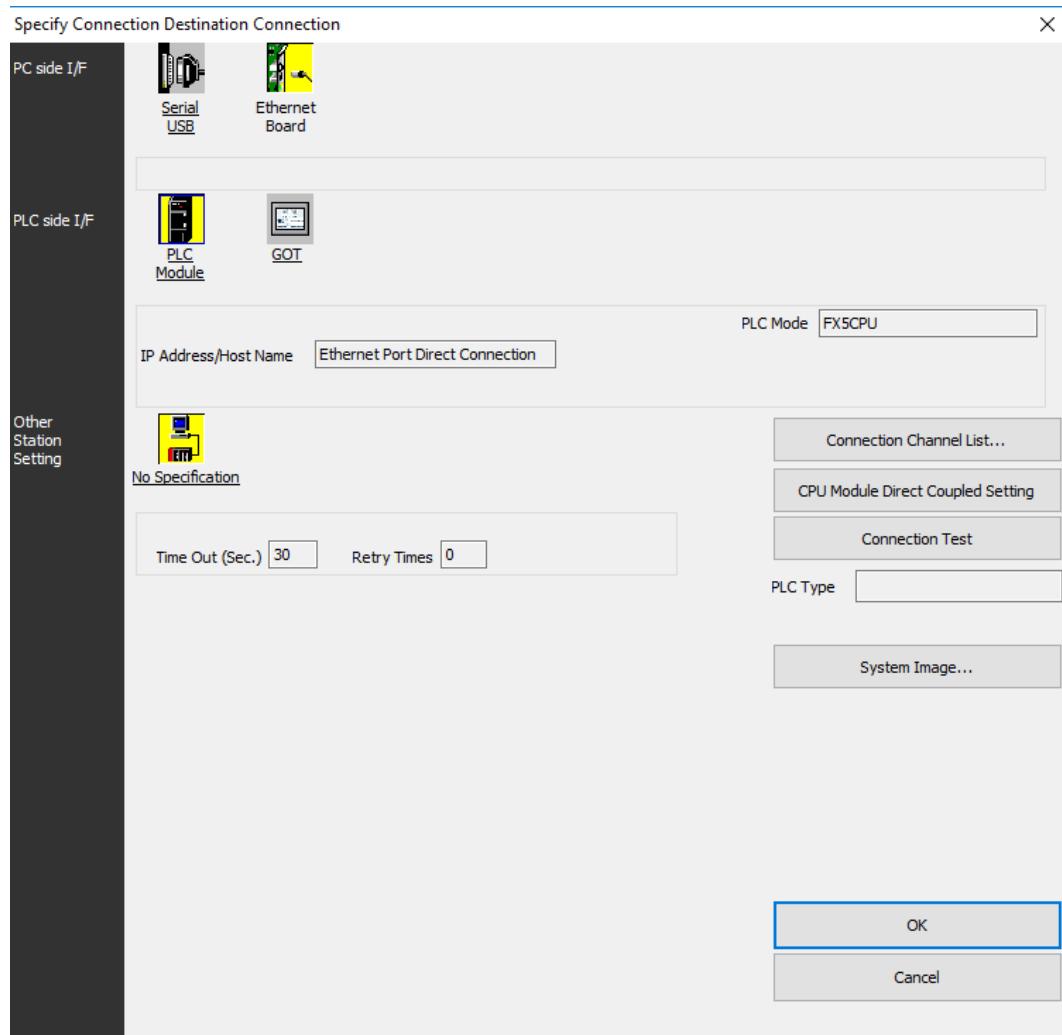

Use **MELSOFT GX Works3** to configure the port of the PLC.

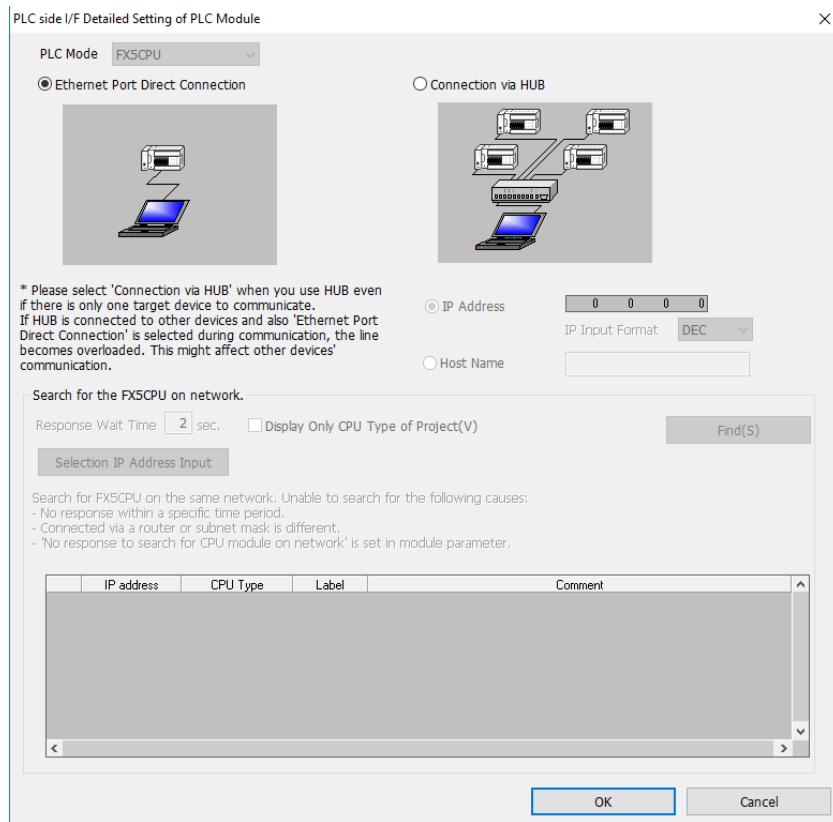

Under the **Online** menu option, select **Read from PLC**.

Select the **FX5CPU** option for the Series.

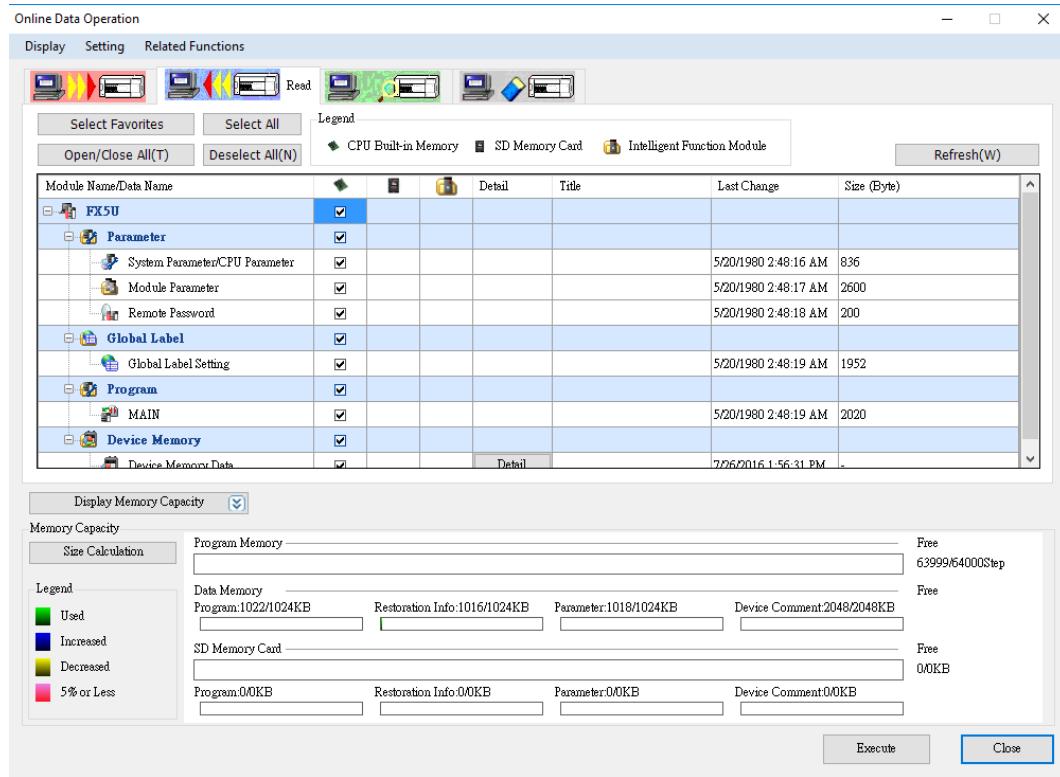

In the connection window, select **Ethernet Board**. Click **PLC Module** and in the dialog window, select the **Ethernet Port Direct Connection** radio button.

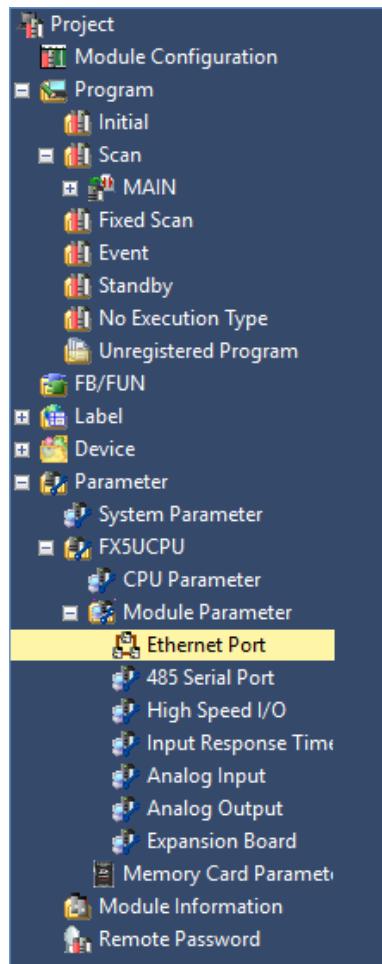

**Click Connection Test to verify the connection and then press OK.**

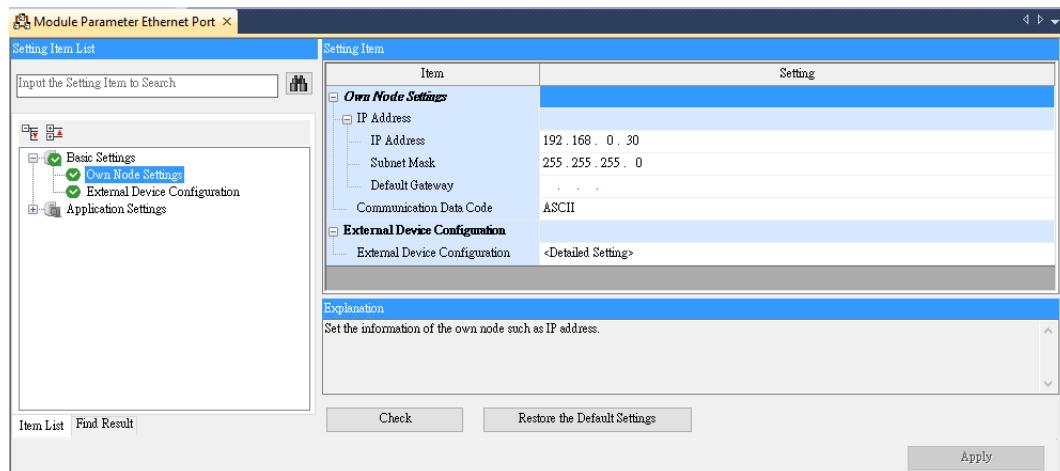

**Click Select All in the Online Data Operation window and press Execute. Allow the read to finish.**

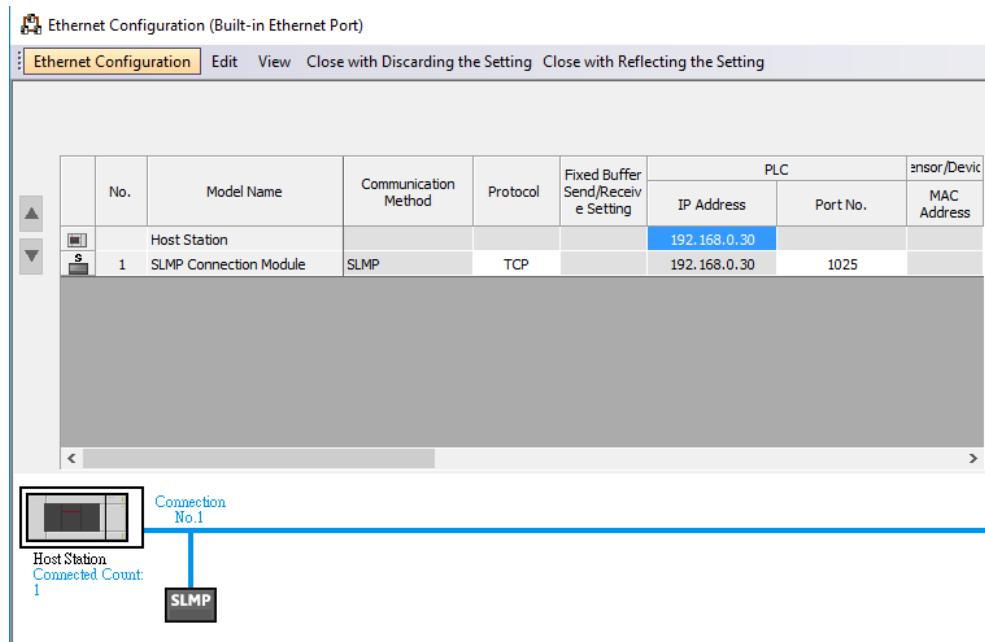

In the **Project** sidebar, expand **Parameter**, **FX5UCPU**, and **Module Parameter** and select **Ethernet Port**.

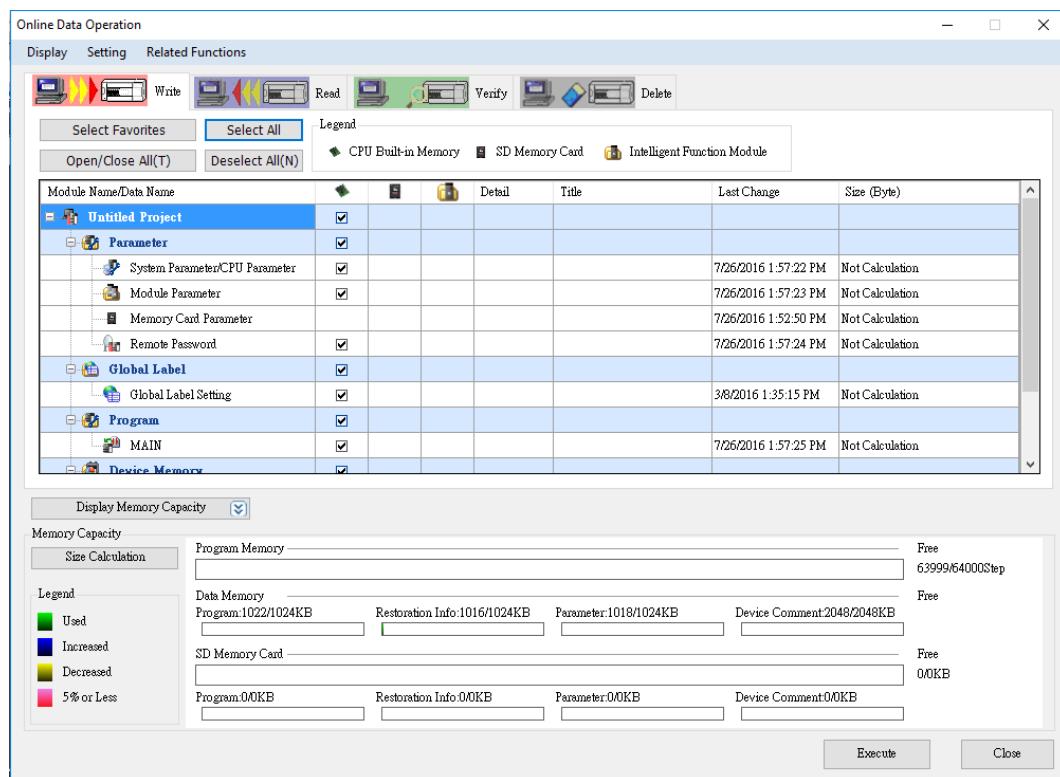

The **IP Address** of the PLC can be obtained here. Switch the **Communication Data Code** to the mode needed (Binary or ASCII). Double click “<Detailed Setting>” under **External Device Configuration** to get the port information. Verify the **Protocol** is TCP.

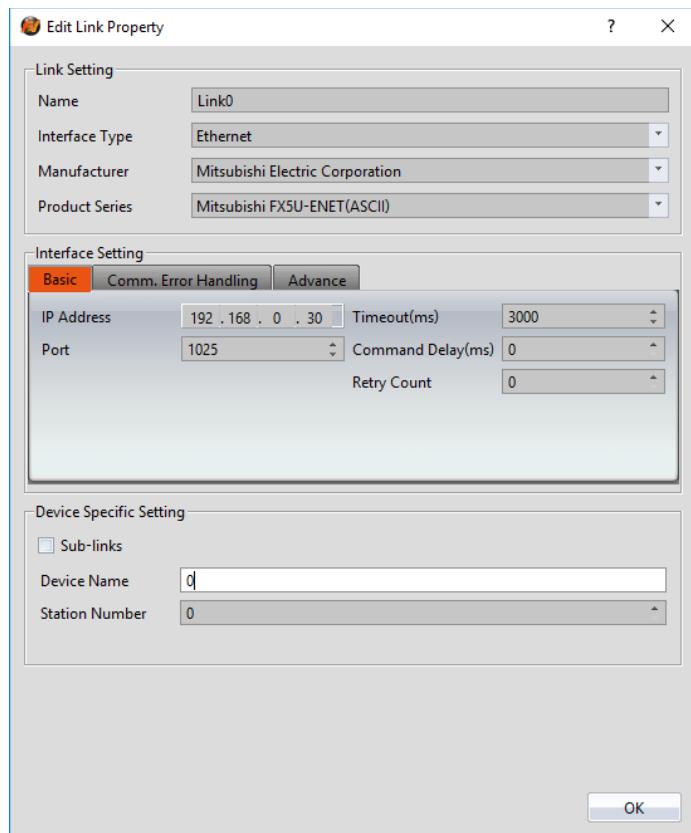

If the user needs to change the **IP Address**, edit the IP address under the **Own Node Settings**. Then enter the Detailed Settings and press **Close with Reflecting the Setting**. Under the **Online** menu option, select **Write to PLC** to save the settings to the PLC. Click **Select All** and press **Execute** in the Online Data Operation window.

Note: For more detailed information please refer to the PLC manual.

## Connecting PLC to HMI

Within the **Link** configuration window in FvDesigner:

Under **Interface Type** select Ethernet

Under **Manufacturer** select Mitsubishi Electric Corporation

Under **Product Series** select one of the Mitsubishi FX5U-ENET options. The last part of the series name (BINARY or ASCII) should be consistent with the Connection Data Code set in the Ethernet Port for the PLC.

Enter the **IP Address** that was written into the PLC.

Enter 1025 for the Port.

### 2.2.8 QSeries-Serial Communication(Link Port)

### 2.2.8.3 Connecting to HMI

#### Configuring the PLC

Use **MELSOFT GX Works2** to configure the port of the **QJ71C24N Module**.

Under the Project Sidebar, expand **Intelligent Function Module** and select **Switch Setting**.

Configure it to the settings detailed below.

Switch Setting 0000:QJ71C24N

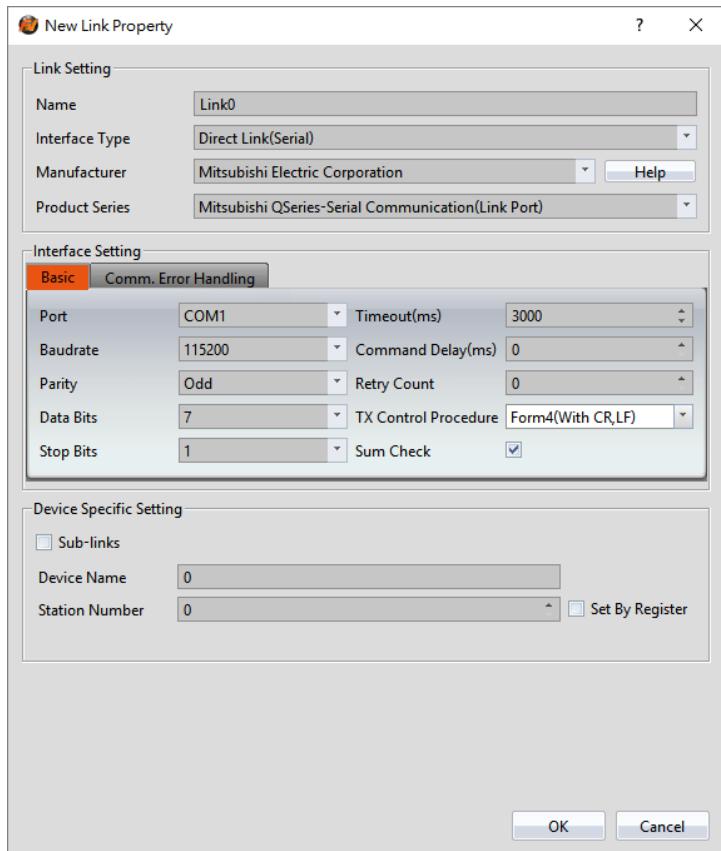

Item	CH1	CH2
Operation setting	Independent	Independent
Data Bit	7	7
Parity Bit	None	None
Even/odd parity	Odd	Odd
Stop bit	1	1
Sum check code	None	None
Online Change	Disable	Disable
Setting modifications	Disable	Disable
Communication rate setting	115200bps	115200bps
Communication protocol setting	MC protocol (Format 4)	MC protocol (Format 4)
Station number setting (0 to 31)	0	

The following setting is available for product information 10122000000000-B or later.  
 Communication protocol setting  
 - Predefined protocol

\* This dialog setting is linked to the Switch Setting of the PLC parameter.  
 Default value will be shown in the dialog  
 if the Switch Setting of the PLC parameter contains an out-of-range value.

Note: For more detailed information please refer to the PLC manual.

### Connecting PLC to HMI

Within the **Link** configuration window in FvDesigner:

Under **Interface Type** select Serial

Under **Manufacturer** select Mitsubishi Electric Corporation

Under **Product Series** select Mitsubishi QSeries-Serial Communication(Link Port).

Verify the parameters match the window above.

The setting of Q series CPU setting if “Use serial communication” is checked, please use QSeries-Serial Communication (Link Port), and the transfer control program is set to Form 5 (Binary mode).

### 2.2.9.3 Connecting to HMI

#### Configuring IP Address on PLC

Use **MELSOFT GX Works2** to configure the port of the PLC.

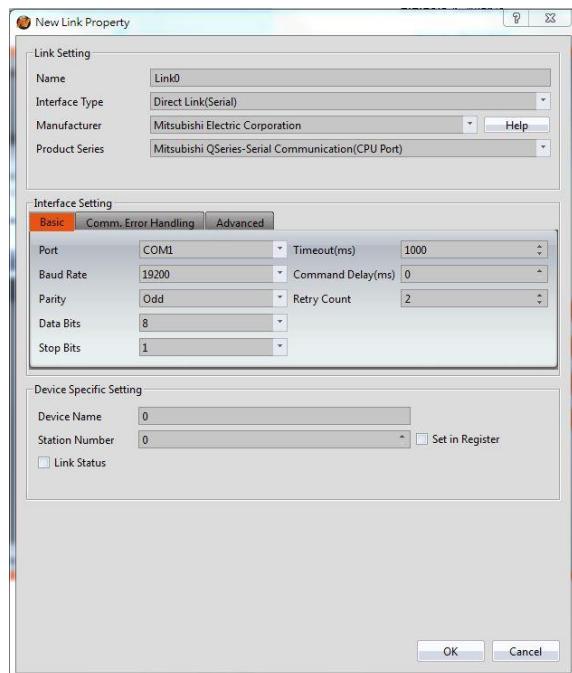

In the **Project** sidebar, expand **Parameter** and expand **PLC Parameter**.

The setting of Q series CPU setting if "Use serial communication" is checked, please use QSeries-Serial Communication (Link Port).

Note: For more detailed information please refer to the PLC manual.

### Connect PLC to HMI

Within the **Link** configuration window in FvDesigner:

Under **Interface Type** select Direct Link(Serial)

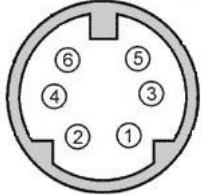

Under **Manufacturer** select Mitsubishi Electric Corporation

Under **Product Series** select one of the Mitsubishi QSeries-Series Communication(CPU Port).

Verify the parameters match the window above.

### 2.2.10.3 Connecting to HMI

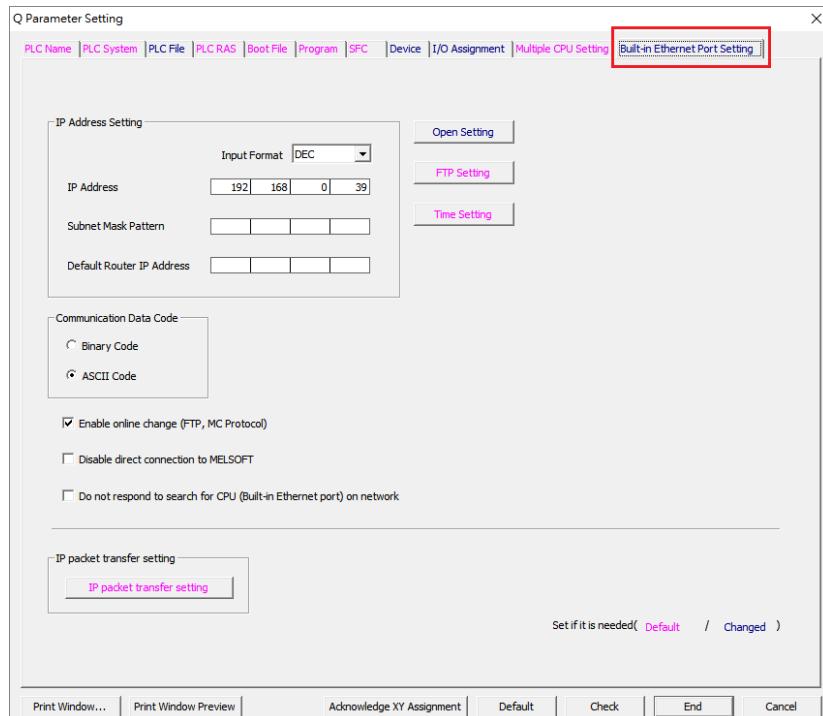

#### Configuring IP Address on PLC

Use **MELSOFT GX Works2** to configure the port of the PLC.

In the **Project** sidebar, expand **Parameter** and expand **PLC Parameter**.

Navigate to **Built-in Ethernet Port Setting** tab, the IP address and other parameters can be set.

Click Open Setting and set the entire Open System column to MC Protocol. For the Host Station Port No 4999.

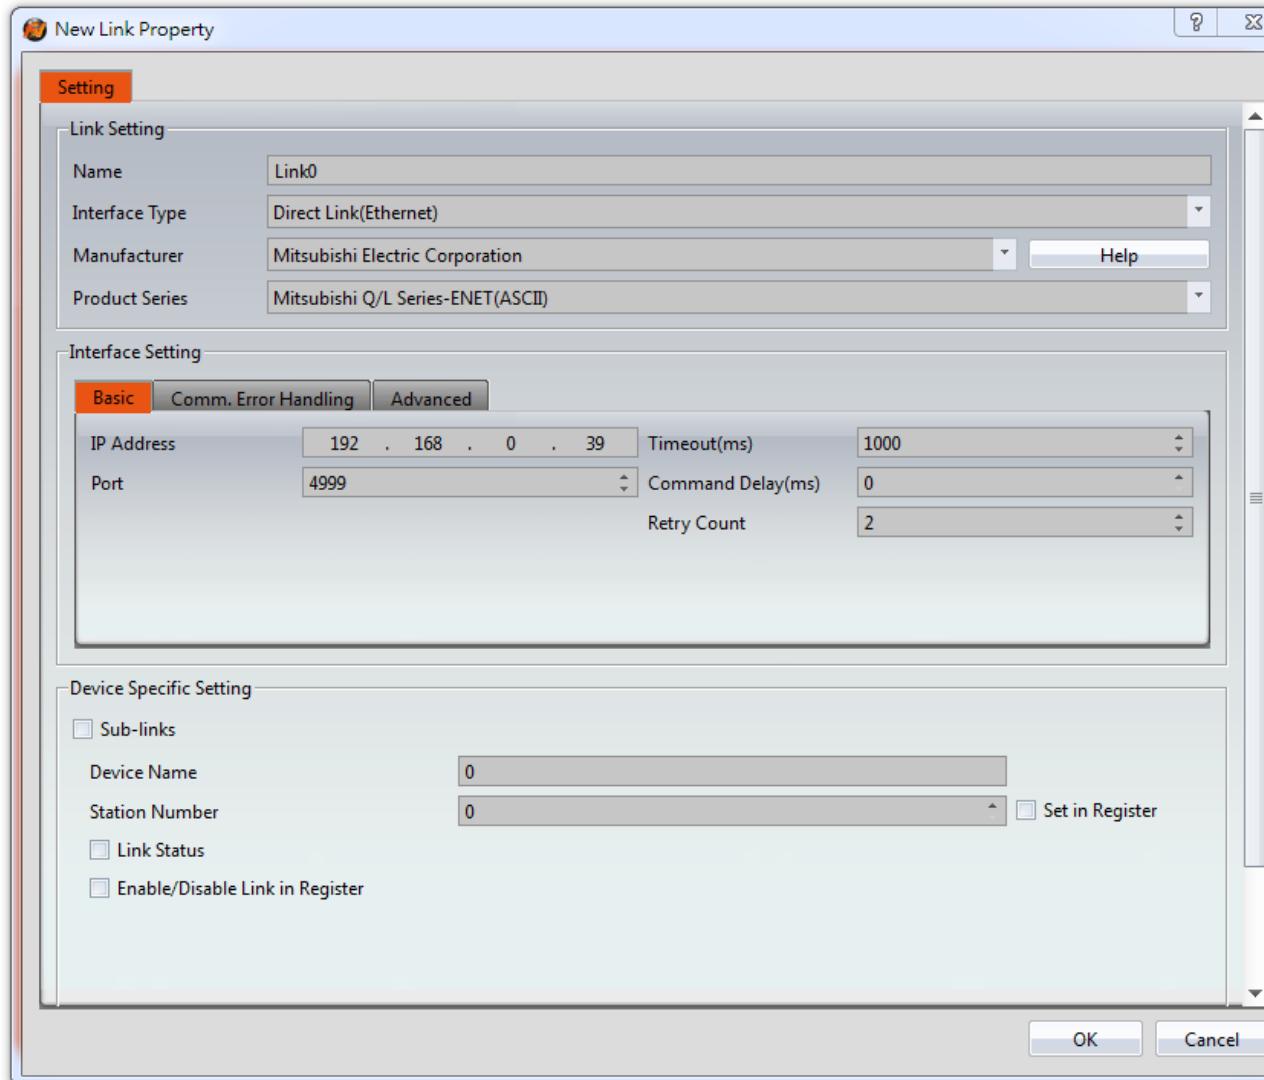

Built-in Ethernet Port Open Setting

	Protocol	Open System	TCP Connection	Host Station	Destination IP Address	Destination Port No.	Start Device to Store Predefined Protocol
1	TCP	MC Protocol		4999			
2	TCP	MELSOFT Connection					
3	TCP	MELSOFT Connection					
4	TCP	MELSOFT Connection					
5	TCP	MELSOFT Connection					
6	TCP	MELSOFT Connection					
7	TCP	MELSOFT Connection					
8	TCP	MELSOFT Connection					
9	TCP	MELSOFT Connection					
10	TCP	MELSOFT Connection					
11	TCP	MELSOFT Connection					
12	TCP	MELSOFT Connection					
13	TCP	MELSOFT Connection					
14	TCP	MELSOFT Connection					
15	TCP	MELSOFT Connection					
16	TCP	MELSOFT Connection					

(\*) IP Address and Port No. will be displayed by the selected format.  
Please enter the value according to the selected number.

Note: For more detailed information please refer to the PLC manual.

### Connect PLC to HMI

Within the **Link** configuration window in FvDesigner:

Under **Interface Type** select Ethernet

Under **Manufacturer** select Mitsubishi Electric Corporation

Under **Product Series** select one of the Mitsubishi Q/L Series-ENET(BINARY 或 ASCII).

The last part of the series name (BINARY or ASCII) should be consistent with the Connection Data Code set in the Ethernet Port for the PLC.

Enter the **IP Address** that was written into the PLC.

Verify the parameters match the window above.

## 2.2.11 iQ-R Series-ENET

#### 2.2.11.3 Connecting to HMI

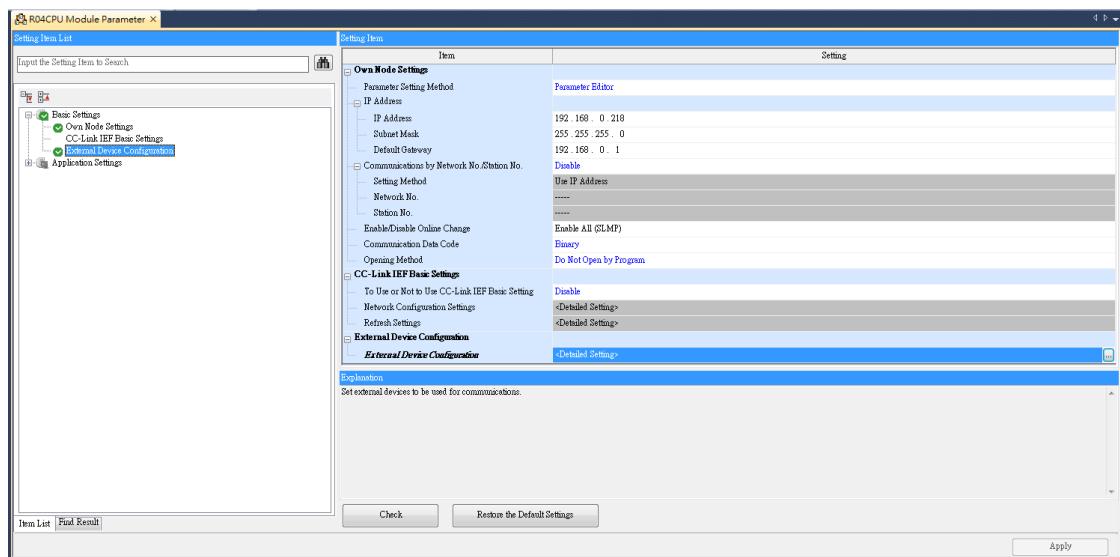

##### Configuring IP Address on PLC

Use **MELSOFT GX Works2** to configure the port of the PLC.

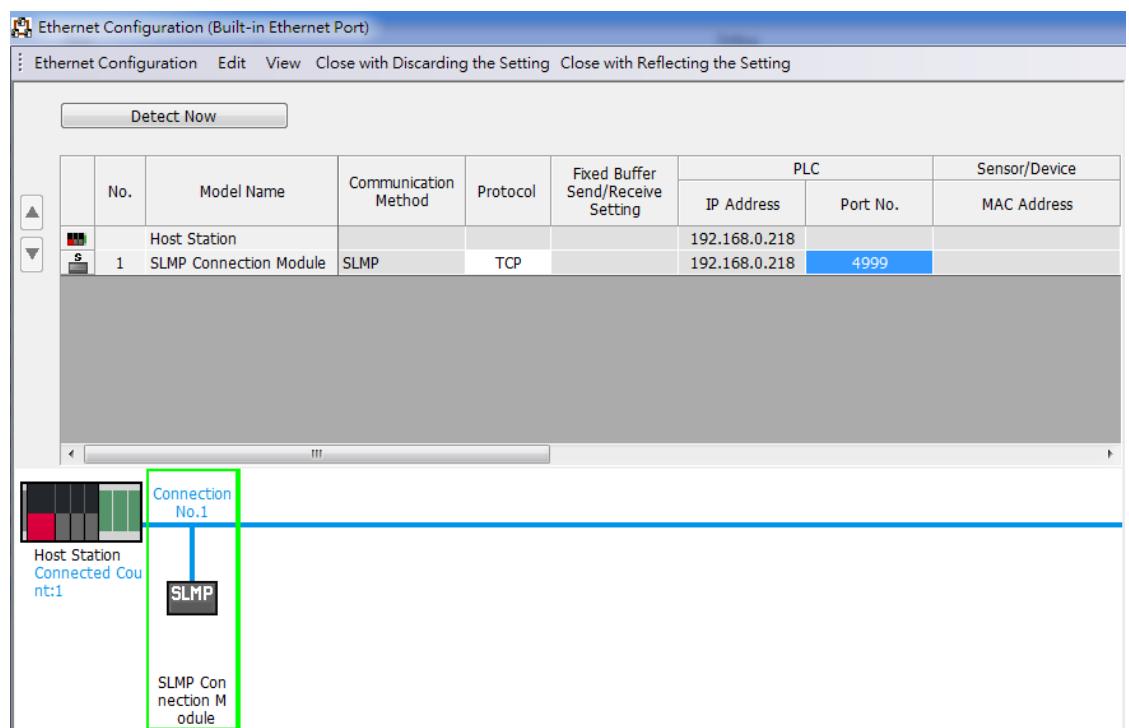

In the **Project** sidebar, expand **Parameter** and expand **Module Parameter**.

Navigate to **External Device Configuration** tab, the IP address and other parameters can be set.

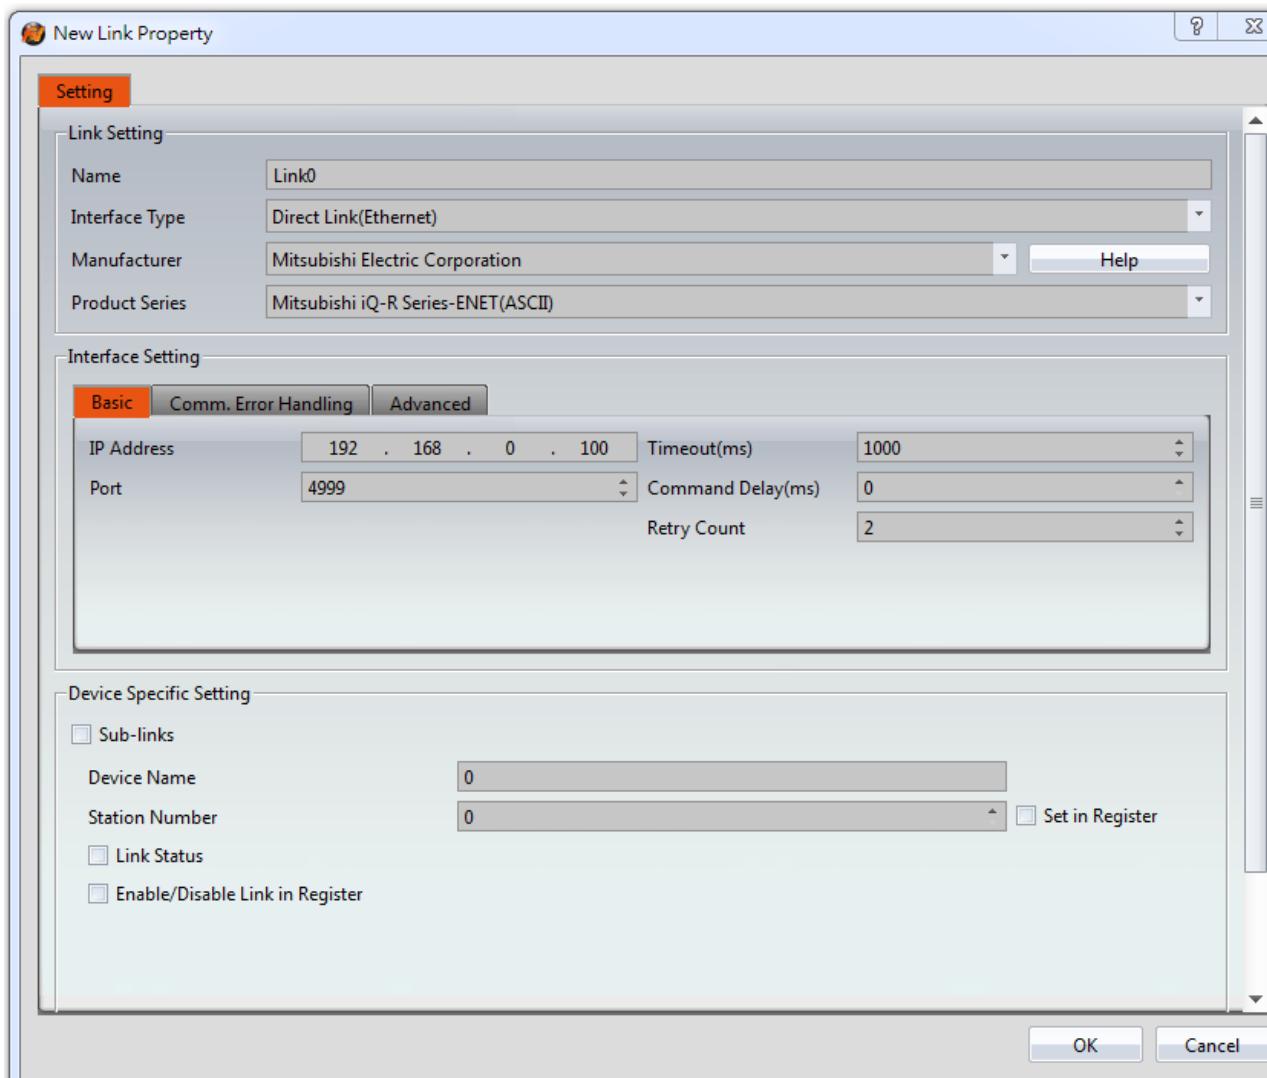

Click PLC Port No and set the Port No to 4999.

Note: For more detailed information please refer to the PLC manual.

### Connect PLC to HMI

Within the **Link** configuration window in FvDesigner:

Under **Interface Type** select Ethernet

Under **Manufacturer** select Mitsubishi Electric Corporation

Under **Product Series** select one of the Mitsubishi iQ-R Series-ENET(BINARY 或 ASCII).

The last part of the series name (BINARY or ASCII) should be consistent with the Connection Data Code set in the Ethernet Port for the PLC.

Enter the **IP Address** that was written into the PLC.

Verify the parameters match the window above.

### 2.2.12 AnA/AnU(Link Port)

### 2.2.13.3 Connecting to HMI

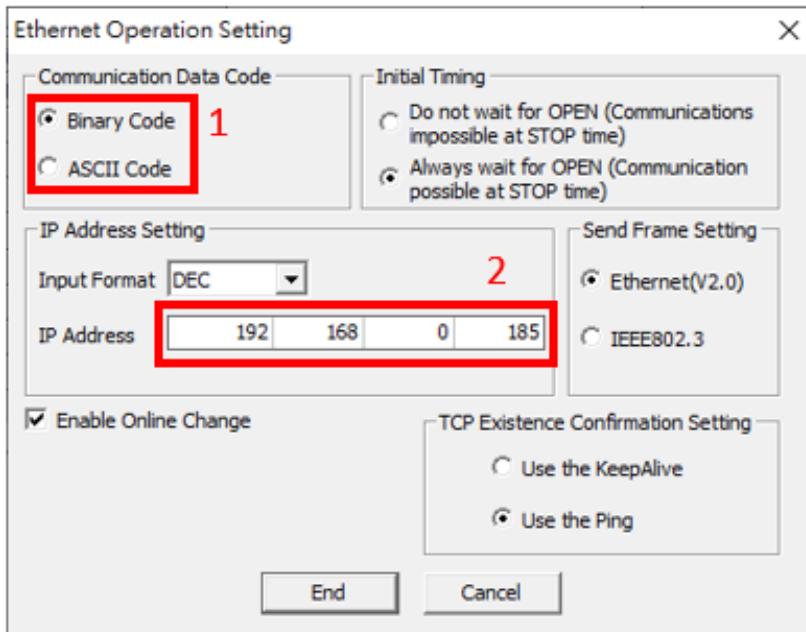

#### Configuring IP Address on PLC

Use **MELSOFT GX Works2** to configure the port of the PLC.

In the **Project** sidebar, expand **Network Parameter** -> **Ethernet/CC IE/MELSECNET** -> **Operation Setting**.

Setting the **Communication Data Code to Binary Code**, and setting the IP address.

Click Open Setting and set the entire Open System column to TCP. And setting to MELSOFT Connection.

Built-in Ethernet Port Open Setting

IP Address/Port No. Input Format DEC

	Protocol	Open System	TCP Connection	Host Station	Destination IP Address	Destination Port No.	Start Device to Store Predefined Protocol
1	TCP	MC Protocol	▼	4999			
2	TCP	MELSOFT Connection	▼				
3	TCP	MELSOFT Connection	▼				
4	TCP	MELSOFT Connection	▼				
5	TCP	MELSOFT Connection	▼				
6	TCP	MELSOFT Connection	▼				
7	TCP	MELSOFT Connection	▼				
8	TCP	MELSOFT Connection	▼				
9	TCP	MELSOFT Connection	▼				
10	TCP	MELSOFT Connection	▼				
11	TCP	MELSOFT Connection	▼				
12	TCP	MELSOFT Connection	▼				
13	TCP	MELSOFT Connection	▼				
14	TCP	MELSOFT Connection	▼				
15	TCP	MELSOFT Connection	▼				
16	TCP	MELSOFT Connection	▼				

(\*) IP Address and Port No. will be displayed by the selected format.  
Please enter the value according to the selected number.

End Cancel

Note: For more detailed information please refer to the PLC manual.

### Connect PLC to HMI

Within the **Link** configuration window in FvDesigner:

Under **Interface Type** select Ethernet

Under **Manufacturer** select Mitsubishi Electric Corporation

Under **Product Series** select one of the Mitsubishi Q/L Series-ENET(BINARY).

Connection Data Code set in the Ethernet Port 5002 for the PLC.

Enter the **IP Address** that was written into the PLC.

Verify the parameters match the window above.

## 2.3 Omron

### 2.3.1 Omron SYSMAC CP Series

#### 2.3.1.1 Communication Setting

Item	Default Setting	Remark
------	-----------------	--------

Signal Level	RS232	
Baud Rate	9600	
Data Length	7	
Stop Bit	2	
Parity	Even	
PLC Station No.	0	
Communication Method	FINS	

### 2.3.1.2 Memory Resource Review

Device	Description	Data bit	Min.	Max.
TIM	Timer Area	1	0	4095
CNT	Counter Area	1	0	4095
CIO	CIO Area	16	0	6143
W	Work Area	16	0	511
H	Holding Bit Area	16	0	511
A	Auxiliary Bit Area	16	0	959
T	Timer Area	16	0	4095
C	Counter Area	16	0	4095
D	DM Area	16	0	32767

### 2.3.1.3 Connecting to HMI

#### Configuring the PLC

Use **CX-Programmer** to configure the port of the PLC.

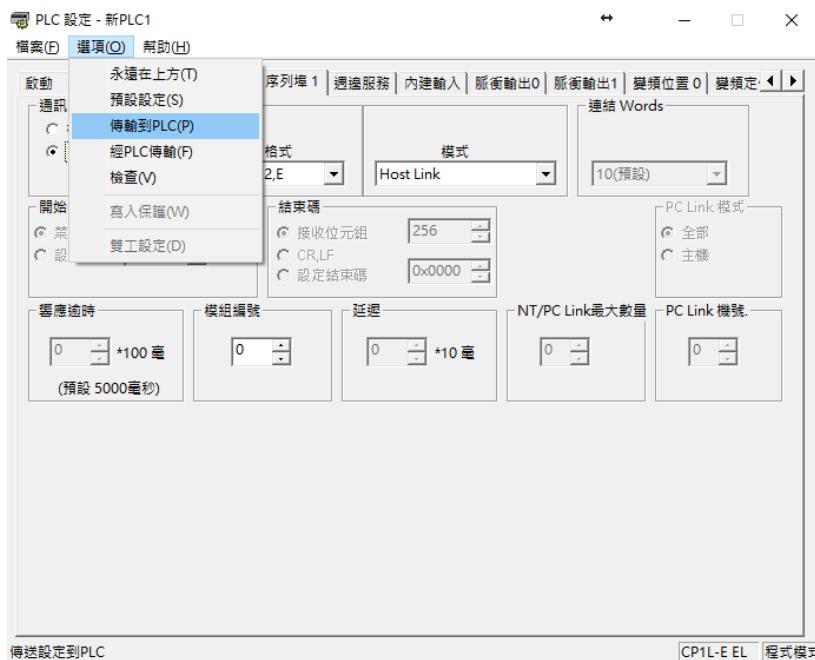

Under 專案 Task 工作區 Sidebar, expand 設定.

Navigate to **序列埠 1** tab and configure it to the settings detailed below.

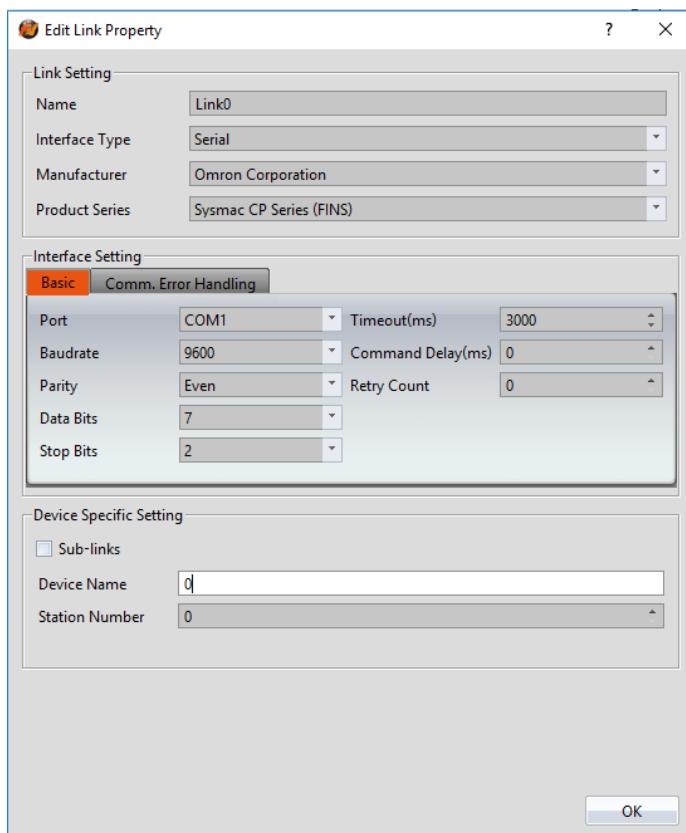

After click **傳輸到 PLC** to write in PLC.

Note: For more detailed information please refer to the PLC manual.

### Connecting PLC to HMI

Within the **Link** configuration window in FvDesigner:

Under **Interface Type** select **Serial**

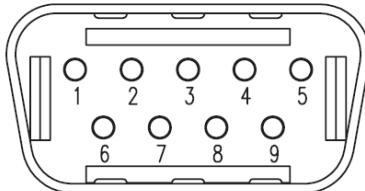

Under **Manufacturer** select **Omron Corporation**

Under **Product Series** select Sysmac CP Series (FINS)

Under **Port** select COM1

#### 2.3.1.4 Wiring Diagrams

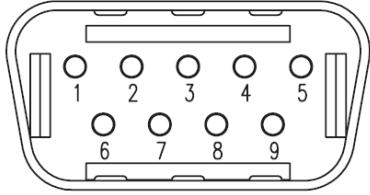

##### PLC RS232 Pinout

### 2.3.2.3 Connecting to HMI

#### Configuring IP Address on PLC

Use **CX-Programmer** to configure the IP of the PLC.

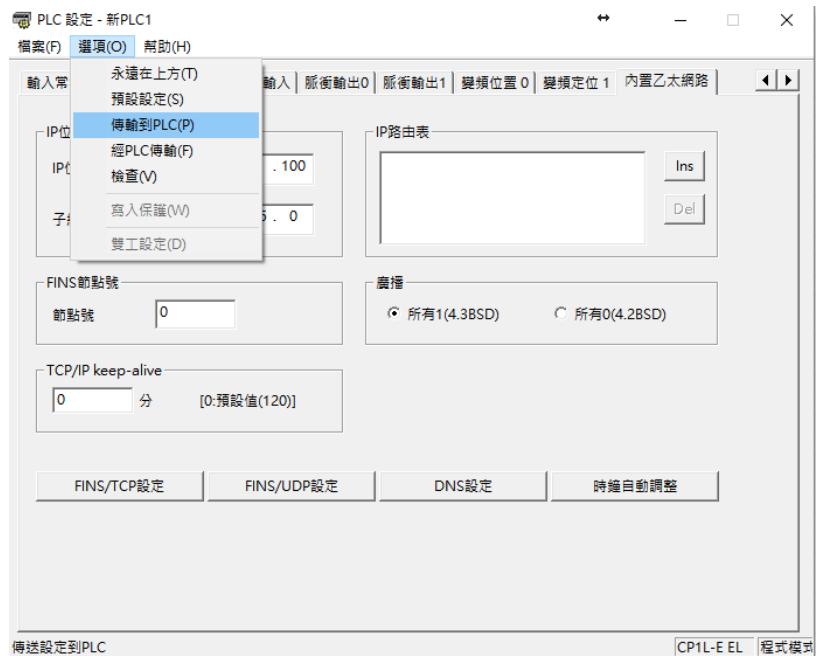

In the **專案 Task** sidebar, expand **設定**

*Navigate to 内置乙太網路 tab, the IP address and other parameters can be set.*

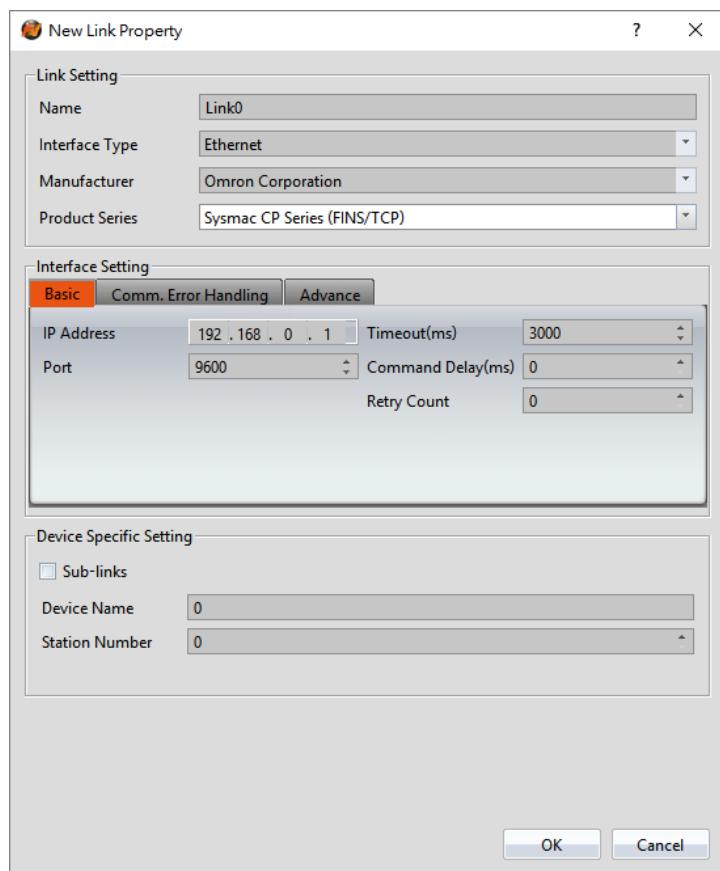

*After click 傳輸到 PLC to write in PLC.*

Note: For more detailed information please refer to the PLC manual.

## HMI 設定

Within the **Link** configuration window in FvDesigner:

Under **Interface Type** select Ethernet

Under **Manufacturer** select Omron Corporation

Under **Product Series** select Sysmac CP Series (FINS/TCP)

Enter the **IP Address** that was written into the PLC

Enter 9600 for the Port

### 2.3.3 Omron SYSMAC CS/CJ Series

#### 2.3.3.1 Communication Setting

Item	Default Setting	Remark
Signal Level	RS232/RS422	
Baud Rate	9600

### 2.3.4.3 Connecting to HMI

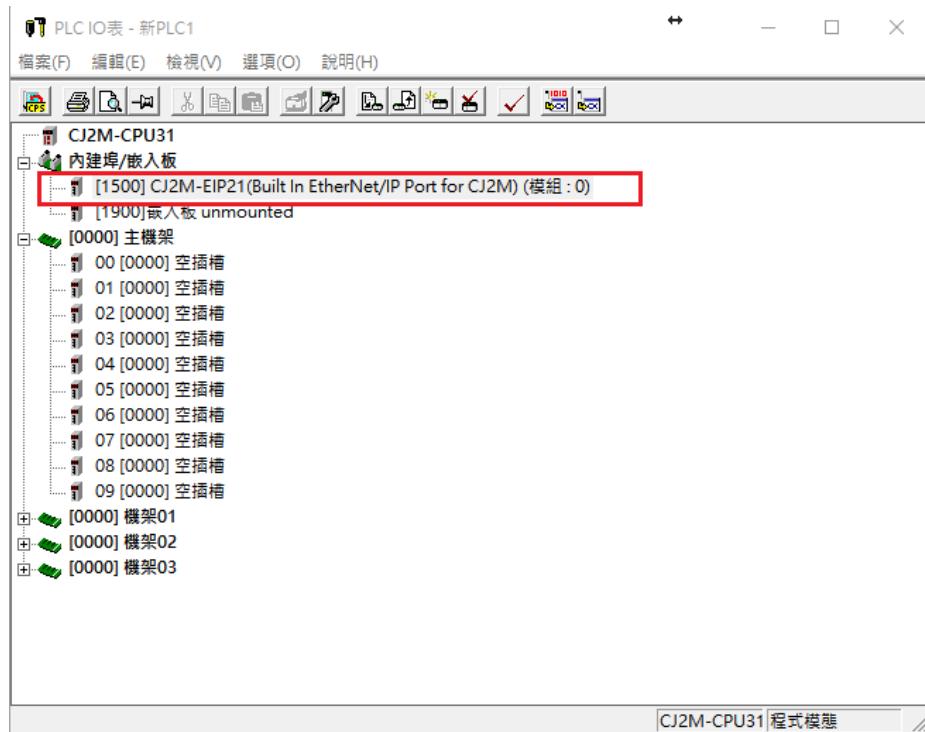

#### Configuring the PLC

Use **CX-Programmer** to configure the IP of the PLC.

In the 專案 Task 工具區 sidebar, expand IO 表及模組設定.

Expand 內建埠/嵌入板, and expand EtherNet/IP Port

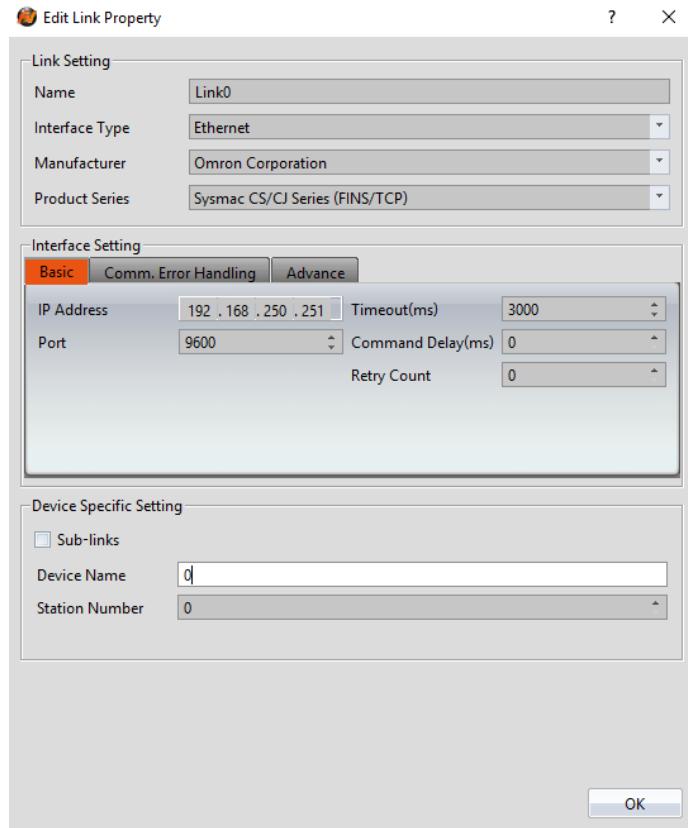

IP address and other parameters can be set.

Note: For more detailed information please refer to the PLC manual.

### Connect PLC to HMI

Within the **Link** configuration window in FvDesigner:

Under **Interface Type** select Ethernet

Under **Manufacturer** select Omron Corporation

Under **Product Series** select Sysmac CS/CJ Series (FINS/TCP)

Enter the **IP Address** that was written into the PLC

Enter 9600 for the **Port**

### 2.3.5 Omron SYSMAC CPM Series

### 2.3.6.3 Connecting to HMI

#### Configuring the PLC

Use **Sysmac Studio** to configure the port of the PLC.

Under 專案多檢視瀏覽器 Sidebar, select 設定和安裝>控制器設定>內置

**EtherNet/IP 通訊設定** and configure it to the settings detailed below.

### Connecting PLC to HMI

Within the **Link** configuration window in FvDesigner:

Under **Interface Type** select Ethernet

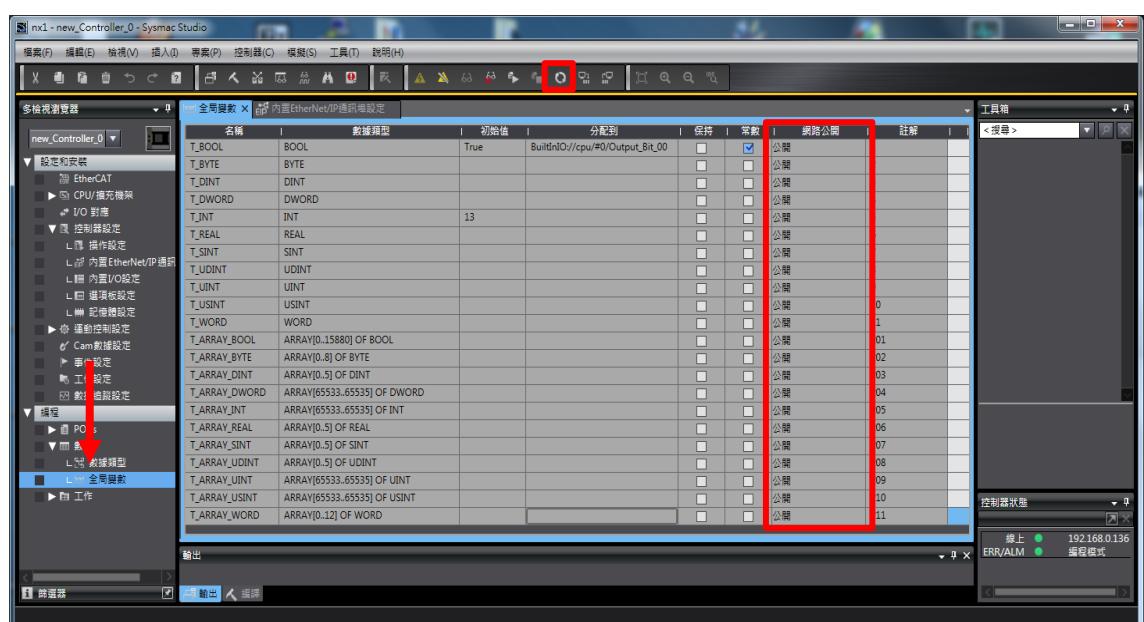

Under **Manufacturer** select Omron Corporation

Under **Product Series** select SYSMAC NJ/NX Series(EtherNet/IP)

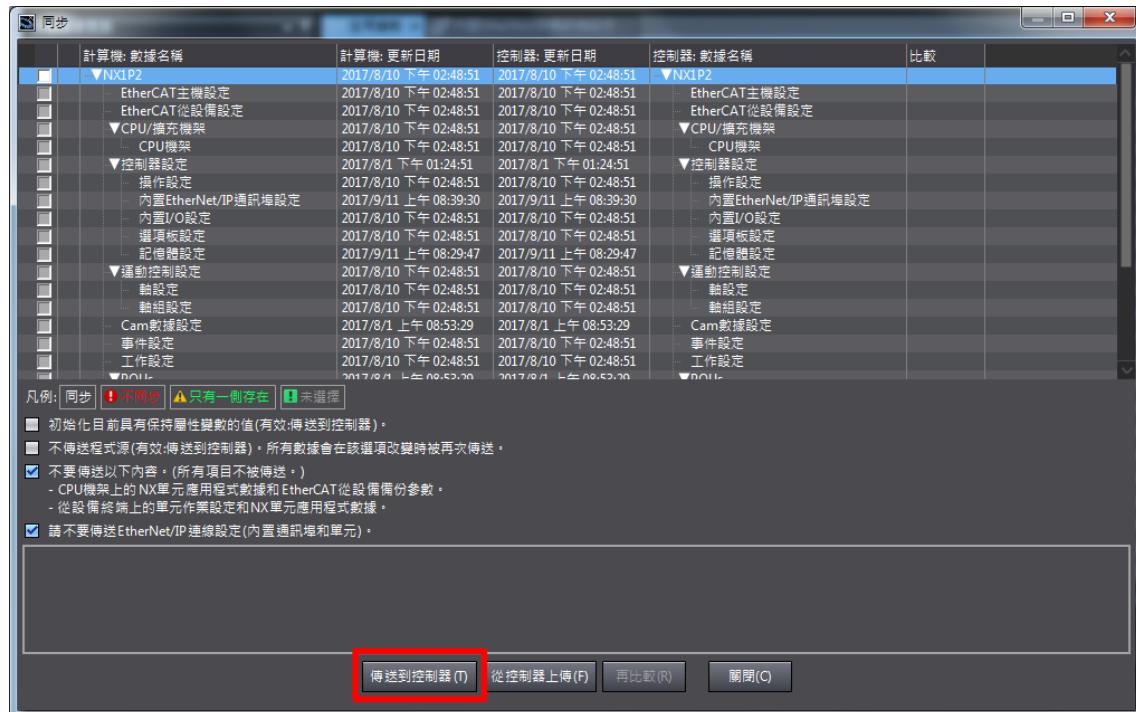

Enter the IP Address that was written into the PLC

Enter 44818 for the Port

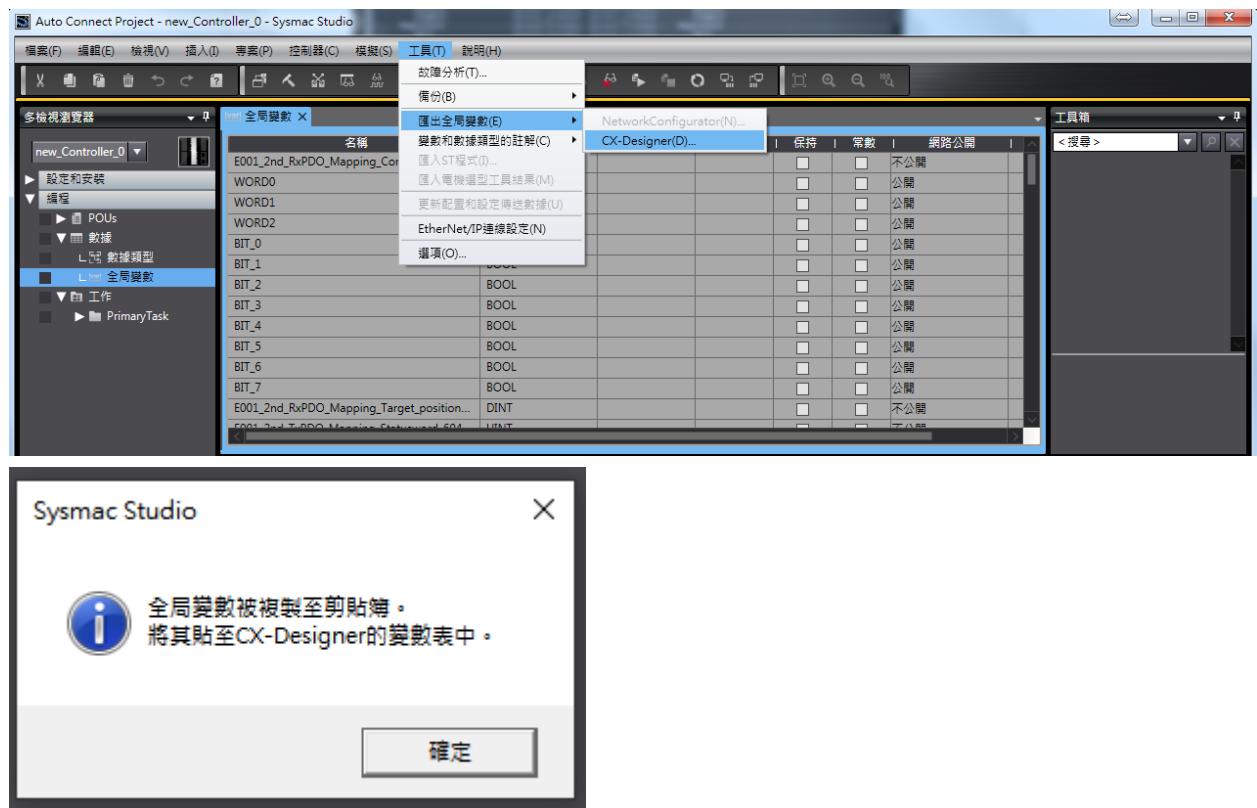

The tag used in the project must be imported first.

Under 專案多檢視瀏覽器 Sidebar, Select 編程>數據>全局變數, Add the Name and data type of User-defined Tag, Setting 公開(public) in 網路公開(internet public) and select Synchronize.

select 傳送到控制器(T)

Select 工具>匯出全局變數(E)>CX-Designer(D) , the Tag data will be Copy into the scrapbook, Paste copied content to excel and save to \*.csv  
Note: For more detailed information please refer to the PLC manual.

### 2.3.7 Omron Ethernet

#### 2.3.7.1 Communication Setting

Item	Default Setting	Remark

### 2.3.9.3 Connecting to HMI

#### Configuring the PLC

Use Sysmac Studio to configure the port of the PLC.

Under 專案多檢視瀏覽器 Sidebar, select 設定和安裝>控制器設定>內置 EtherNet/IP 通訊設定 and configure it to the settings detailed below.

Note: For more detailed information please refer to the PLC manual.

### Connecting PLC to HMI

Within the **Link** configuration window in FvDesigner:

Under **Interface Type** select Ethernet

Under **Manufacturer** select Omron Corporation

Under **Product Series** select Sysmac NX/NJ Series (FINS/UDP)

Enter the IP Address that was written into the PLC

Enter 9600 for the Port

### 2.3.10 Omron SYSMAC CQM Series

#### 2.3.10.1 Communication Setting

Item	Default Setting	Remark
Signal Level	RS232	
Baud Rate	9600

### 2.3.10.3 Connecting to HMI

#### Configuring the PLC

Use **CX-Programmer** to configure the port of the PLC.

Under 專案 Task 工作區 Sidebar, expand 設定.

Navigate to **序列埠 1** tab and configure it to the settings detailed below.

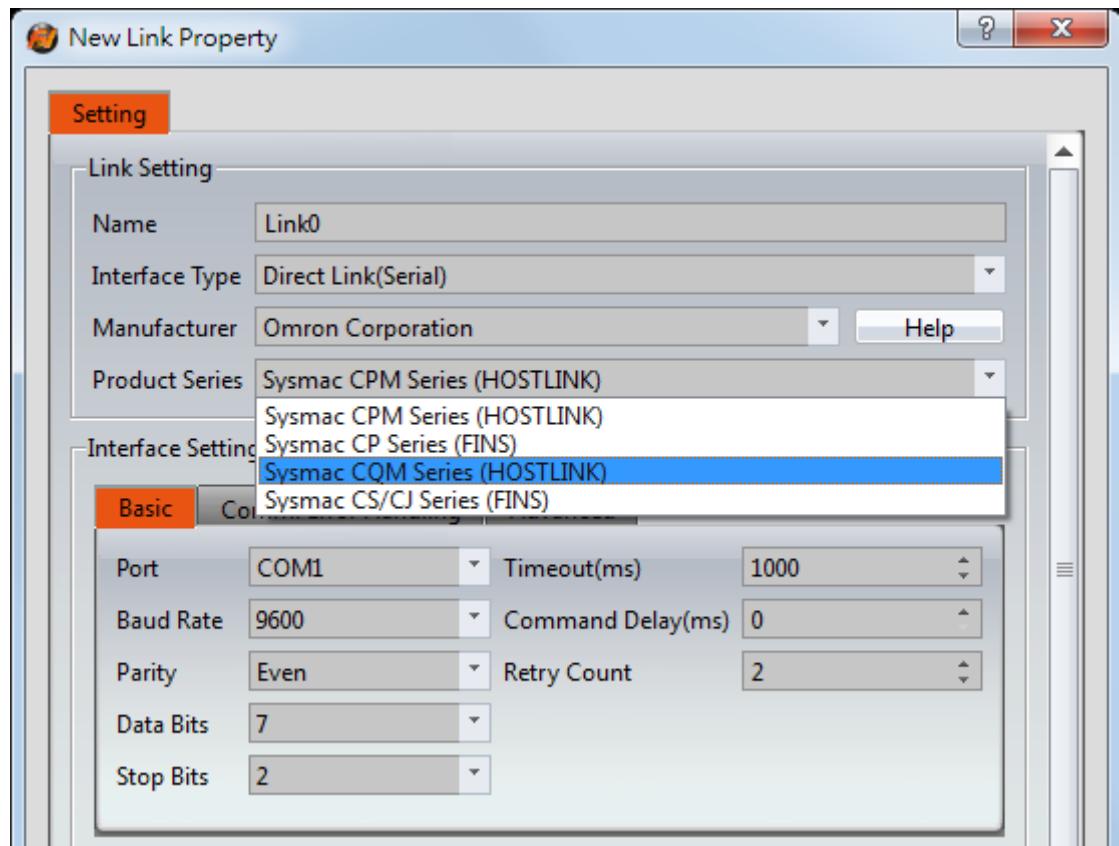

After click 傳輸到 PLC to write in PLC.

Note: For more detailed information please refer to the PLC manual.

### Connecting PLC to HMI

Within the **Link** configuration window in FvDesigner:

Under **Interface Type** select Serial

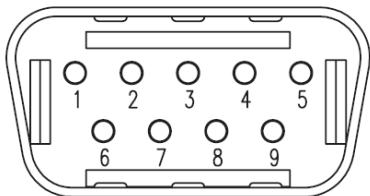

Under **Manufacturer** select Omron Corporation

Under **Product Series** select Sysmac CQM Series (HOSTLINK)

Under **Port** select COM1

AQW	Analog Output	16	0	111

#### 2.4.2.3 Connecting to HMI

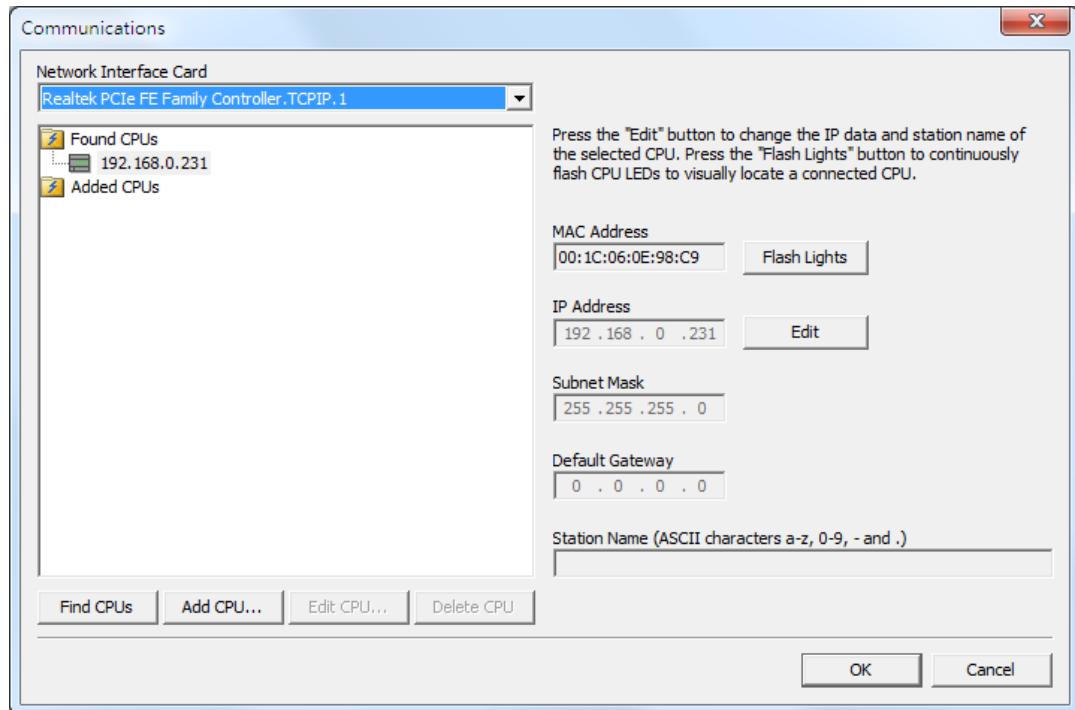

##### Configuring IP Address on PLC

Use the application **STEP 7-MicroWIN SMART** to configure the IP address of the PLC.

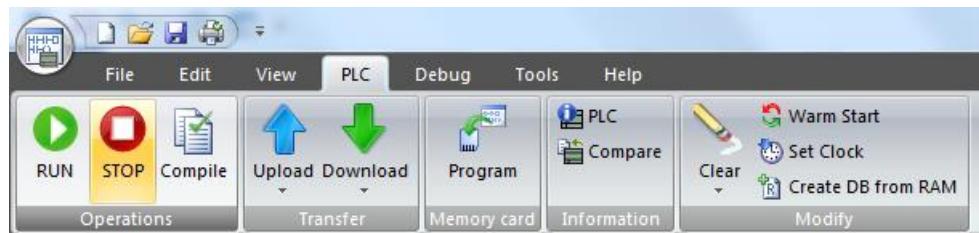

Under the **Project**, press the **Communications** option to connect to the PLC over the local network.

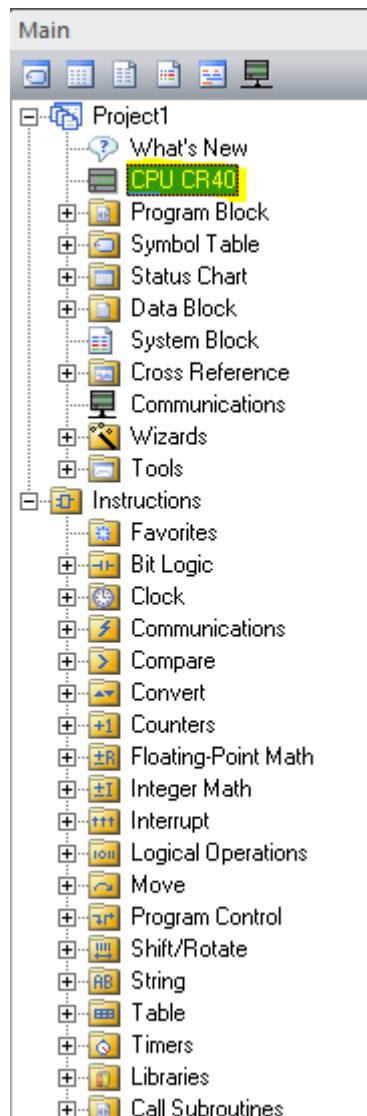

Under Network interface, select one of the options to scan the local network. The IP address of the PLC will show up. The MAC address can be verified with the one on the PLC.

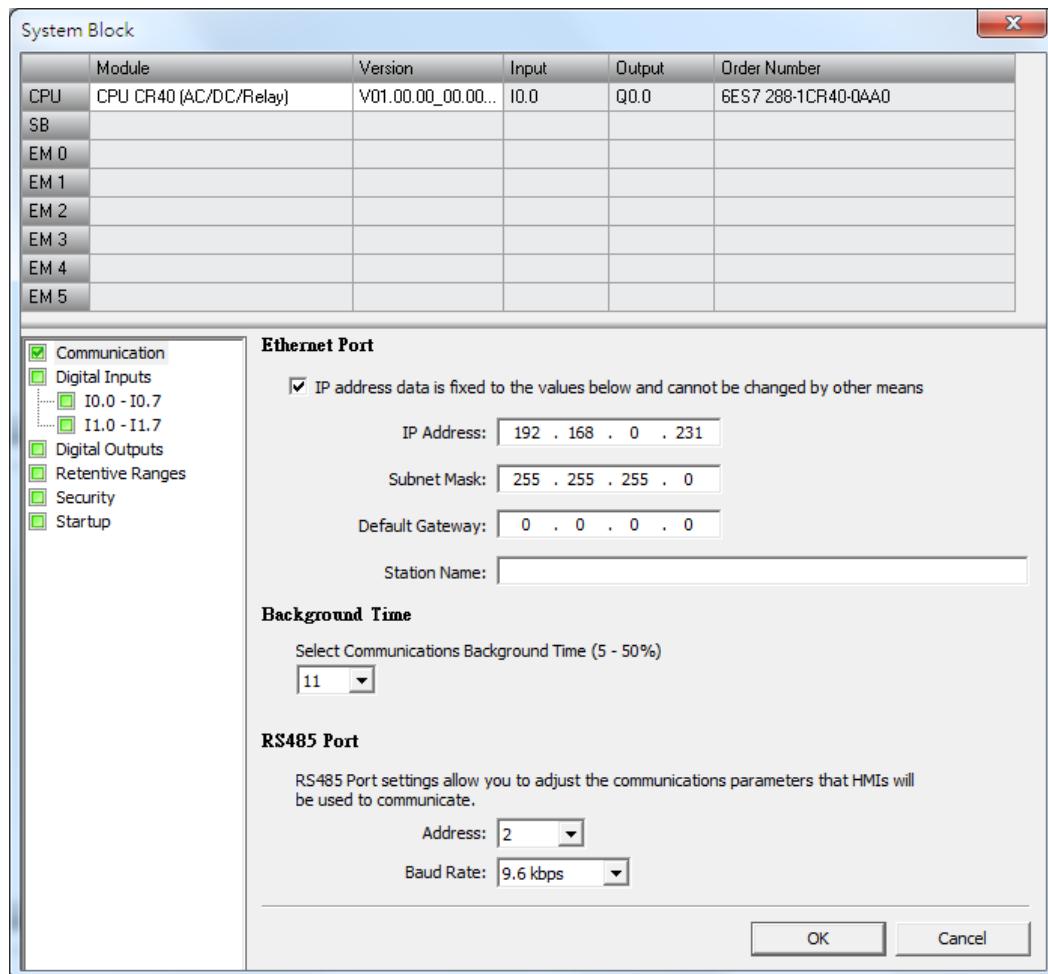

Navigate to the PLC tab and select to upload the PLC program onto the computer.

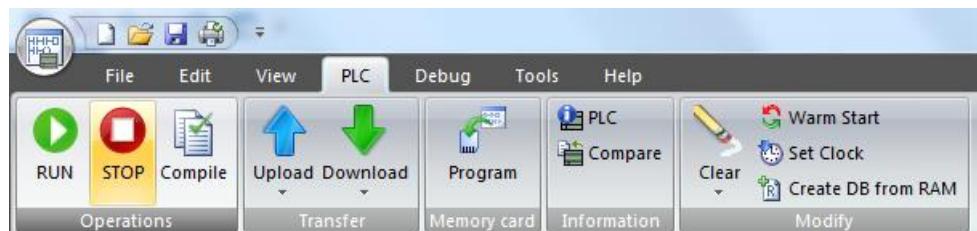

On the sidebar, right click CPU CR40 and select the first option. A dialog window will open up.

In the dialog window, the IP address can be changed. Press OK to confirm the setting.

In the PLC tab, select to download the settings onto the PLC.

Note: For more detailed information please refer to the PLC manual.

### Connecting PLC to HMI

Within the **Link** configuration window in FvDesigner:

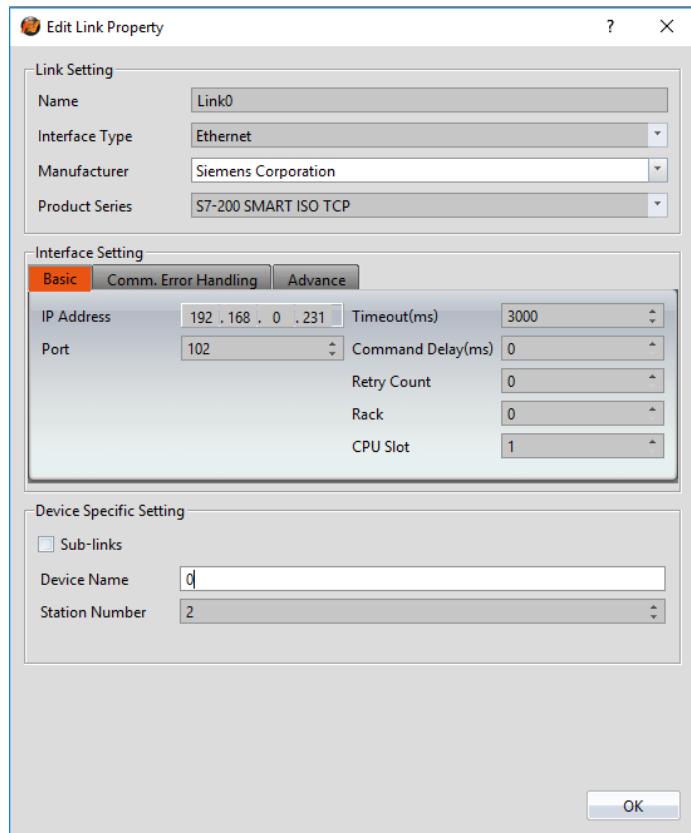

Under **Interface Type** select Ethernet

Under **Manufacturer** select Siemens Corporation

Under **Product Series** select S7-200 SMART ISO TCP

Enter the **IP Address** that was written into the PLC.

Enter the **Port** number that was set on the PLC. The default is 102.

### 2.4.3 Siemens S7-1200 Ethernet

#### 2.4.3.1 Communication Setting

Item	Default Setting	Remark
Signal Level	Ethernet	
Internet Protocol	0.0.0.0	To be configured
Port	102	
PLC Station No.	0	
Communication Method	ISO TCP	

#### 2.4.3.2 Memory Resource Review

Device	Description	Data bit	Min.	Max.
I	Input	1	0	1022.7
Q	Output	1	0	1022.7
M	Bit Memory	1	0	1022.7
IW	Input	16	0	1022
QW	Output	16	0	1022
MW	Word Memory	16	0	1022

#### 2.4.3.3 Support Data block type

Data block type	Size
Bool	Bit
Byte	8-bit
SInt	8-bit
USInt	8-bit
Word	16-bit
Int	16-bit
UInt	16-bit
DWord	32-bit
DInt	32-bit
UDInt	32-bit
Real	32-bit
String	Length = 254 byte

Please make sure that proper setting is in TIA:

- (1) [DB Properties]→[Attributes]→[ Optimized block access] is unchecked
- (2) [PLC program Properties]→[Protection]→[Permit access with PUT/GET communication from remote partner (PLC,HMI,OPC,⋯] is checked.

#### 2.4.3.4 Connecting to HMI

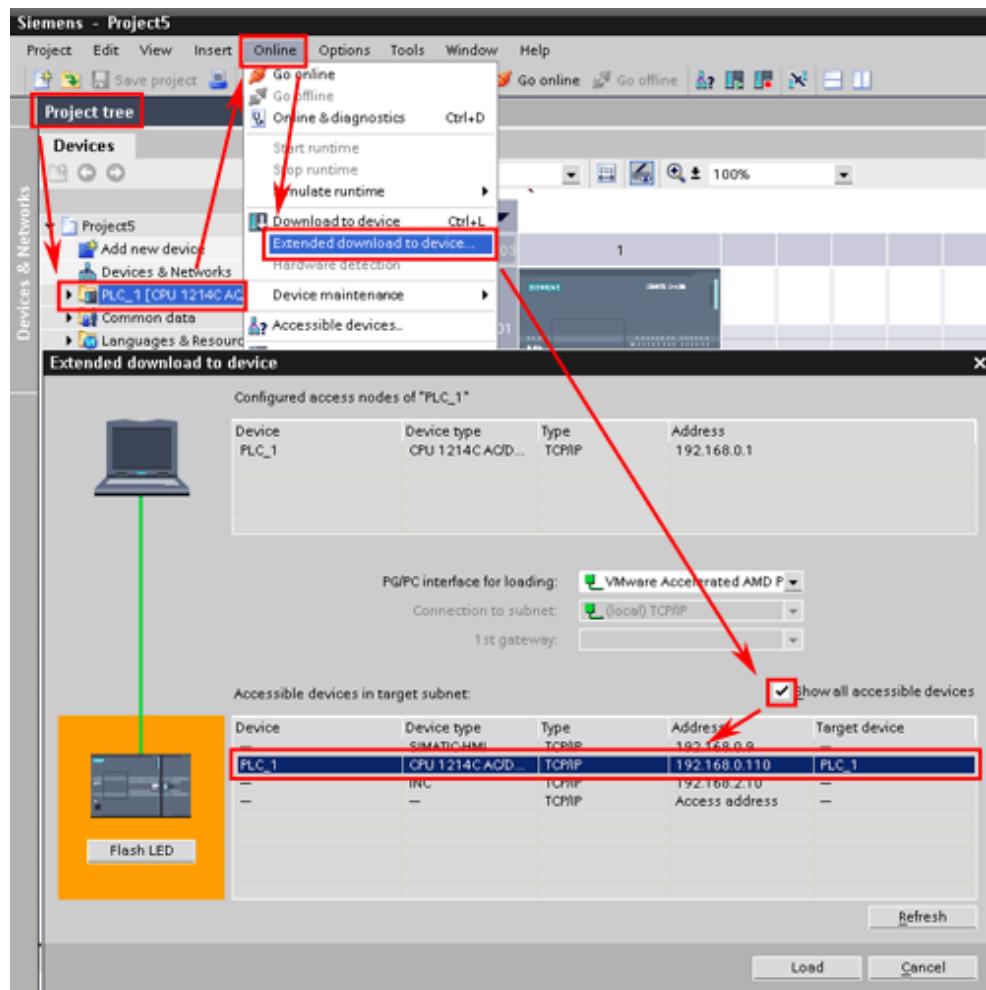

##### Configuring IP Address on PLC

Use the application **TIA V13 Step Basic** to configure the IP address on the PLC.

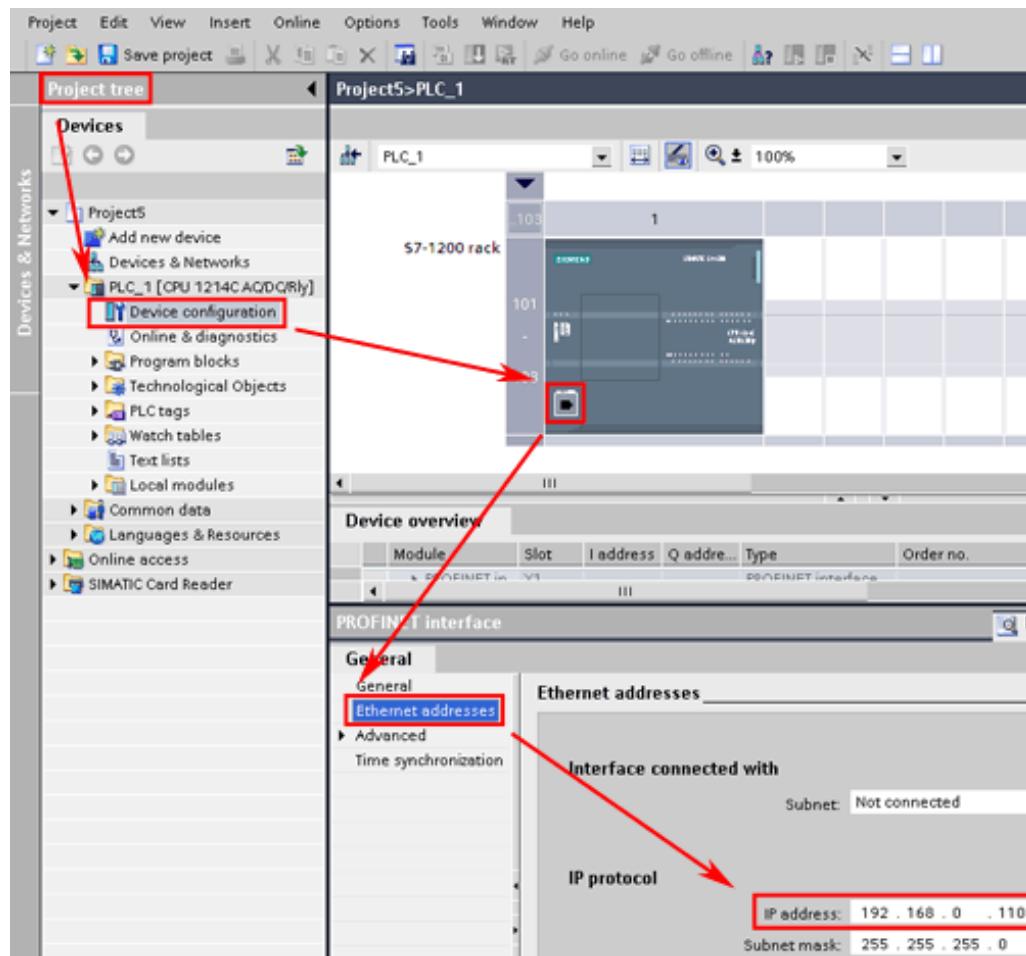

Open a new project and add the device to be configured.

In the Project tree sidebar, select the device and navigate to the **Online** menu option.

Under the Online menu option, select **Extend Download to Device**. Select the appropriate network interfaces and check **Show all accessible devices**. The application will scan the network for the device. When the device shows up, select it.

Under the device in the project tree, select **Device configuration** and click the Ethernet port on the device image. Under the **Ethernet addresses** menu option, the IP address can be configured.

Note: For more detailed information please refer to the PLC manual.

### Connecting PLC to HMI

Within the **Link** configuration window in FvDesigner:

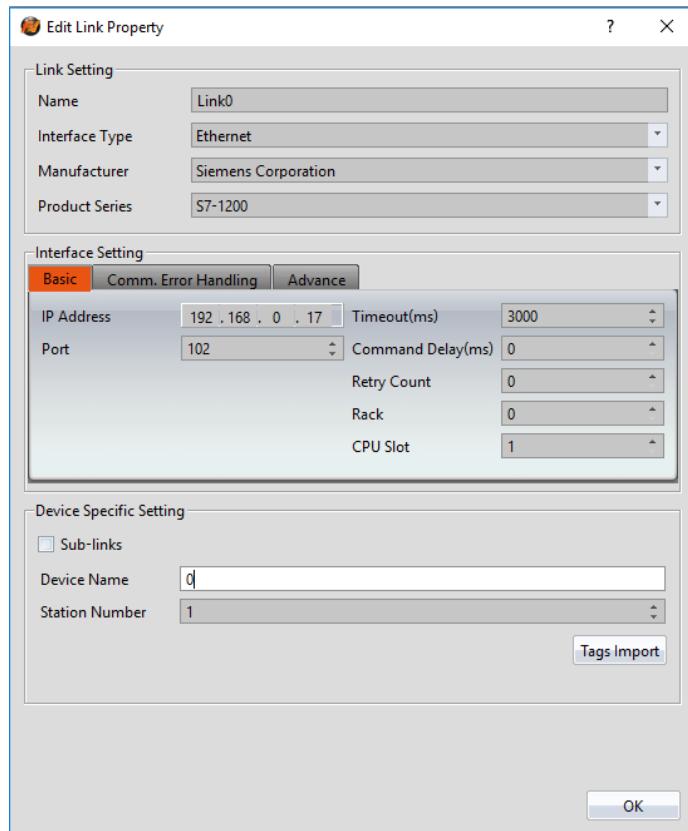

Under **Interface Type** select Ethernet

Under **Manufacturer** select Siemens Corporation

Under **Product Series** select S7-1200

Enter the **IP Address** that was written into the PLC.

Enter the **Port** number that was set on the PLC. The default is 102.

## 2.4.4 Siemens S7-200

### 2.7.1.3 Connecting to HMI

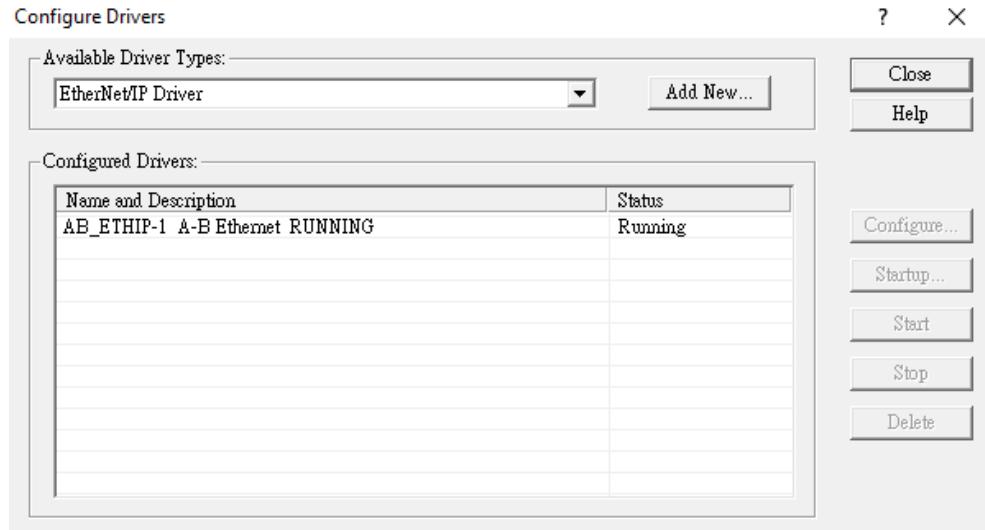

#### **Configuring IP Address on PLC**

The application **RSLinx Classic** (ver. 3.51) was used to configure the IP address on the device.

On the PLC device, make sure the switch on the main module is not set to the **RUN** setting.

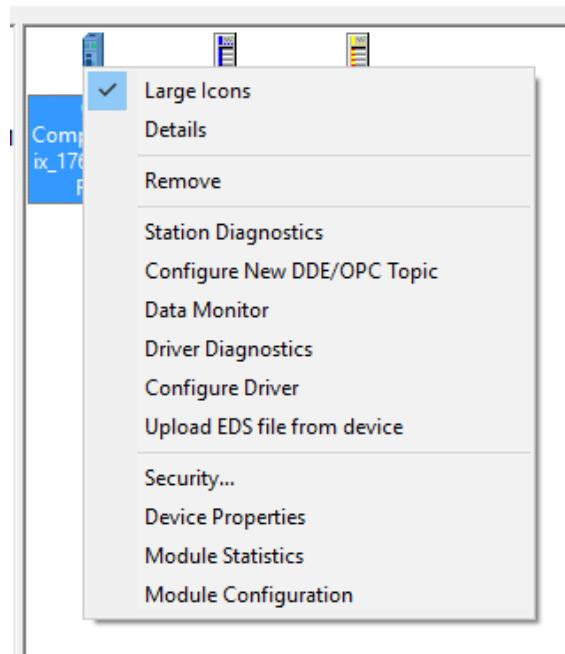

Open RSLinx Classic and connect to the PLC either with a USB-Serial cable or through the local network. To connect to PLC via the local network, follow the steps below.

In the **Communications** menu tab, select **Configure Drivers**. Select **EtherNet/IP Driver** and press ‘Add New’. Select “Your Network Interface Card” and press OK. Start the Driver and close out of the dialog window.

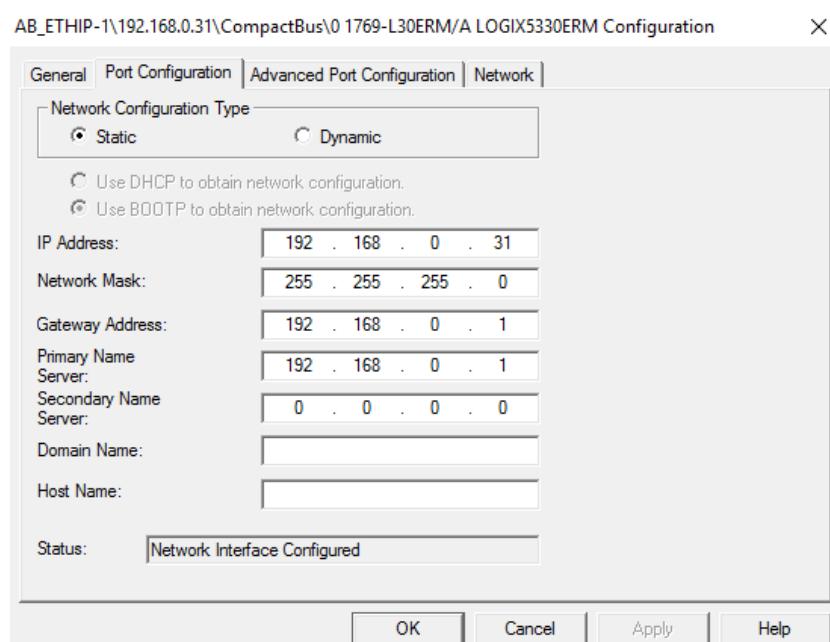

Under the new Ethernet driver, the PLC connected to the local network should be visible.

Right click the main module of the PLC and select **Module Configuration**.

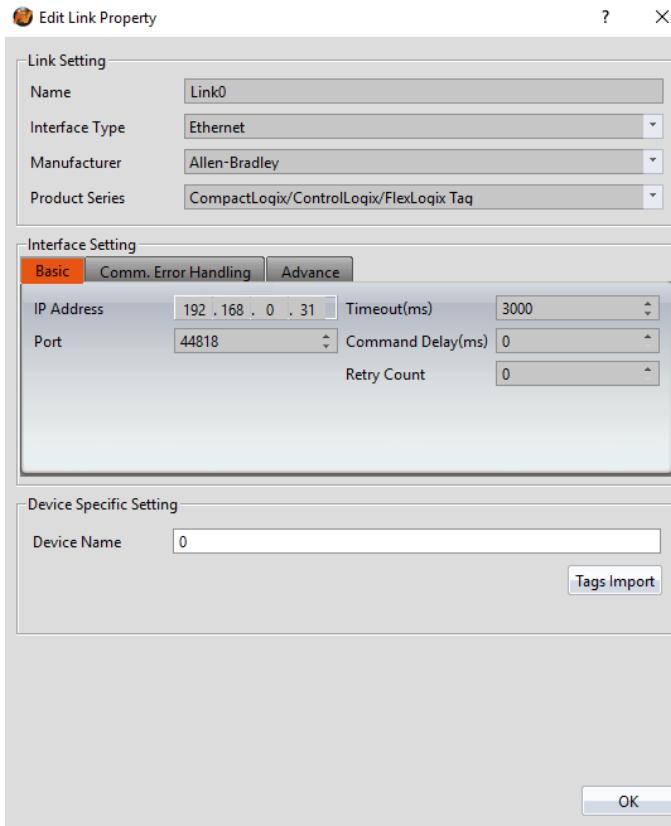

Navigate to the **Port Configuration** tab. Here, the IP address and other parameters can be set. Press OK to confirm the settings.

Note: For more detailed information please refer to the PLC manual.

### [Connect PLC to HMI](#)

Within the **Link** configuration window in FvDesigner:

Under **Interface Type** select Ethernet

Under **Manufacturer** select Allen-Bradley.

Under **Product Series** select CompactLogix/ControlLogix/FlexLogix Tag.

Enter the **IP Address** that was written into the PLC.

#### 2.7.1.4 Tag setting

After setting the CompactLogix/ControlLogix/FlexLogix Tag driver, the user can export the tags edited by RSLogix5000 into a csv file, and then import them into FvDesigner. However, some data type structures defined in RSLogix5000 will not be exported. If you want to use these tags, you must first define the data type structure in FvDesigner. The import procedure of Allen-Bradley CompactLogix/ControlLogix/FlexLogix Tag will be explained below.

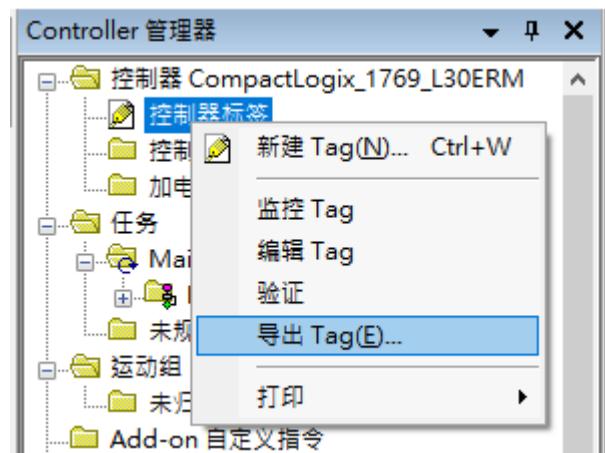

##### Step 1. Create Tag in RSLogix5000

Controller 管理器

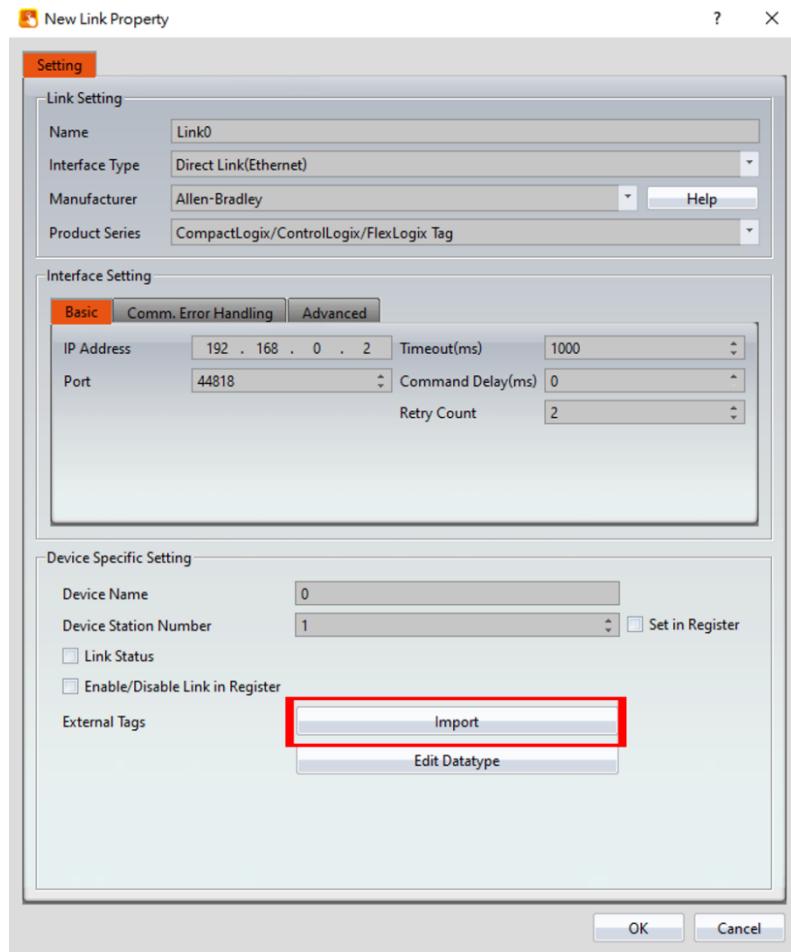

范围(P): CompactLogix\_1 显示(O): 所有 Tag

### Step 2. Export Tag to CSV file

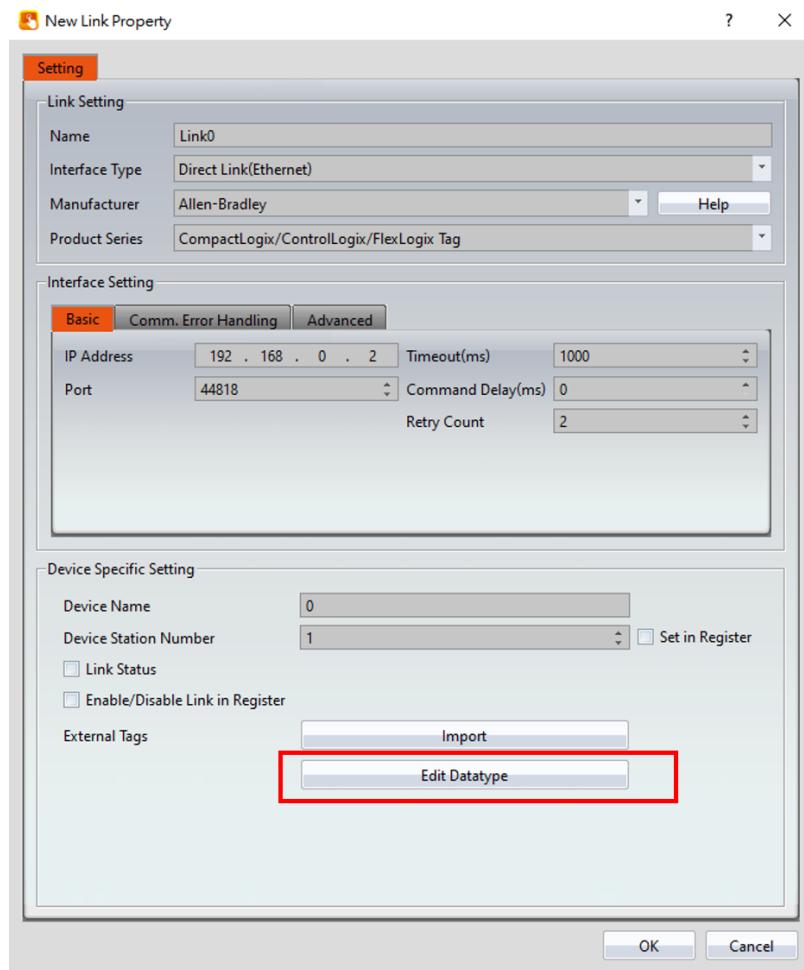

Step 3. After setting the CompactLogix/ControlLogix/FlexLogix Tag in FvDesigner, click Import.

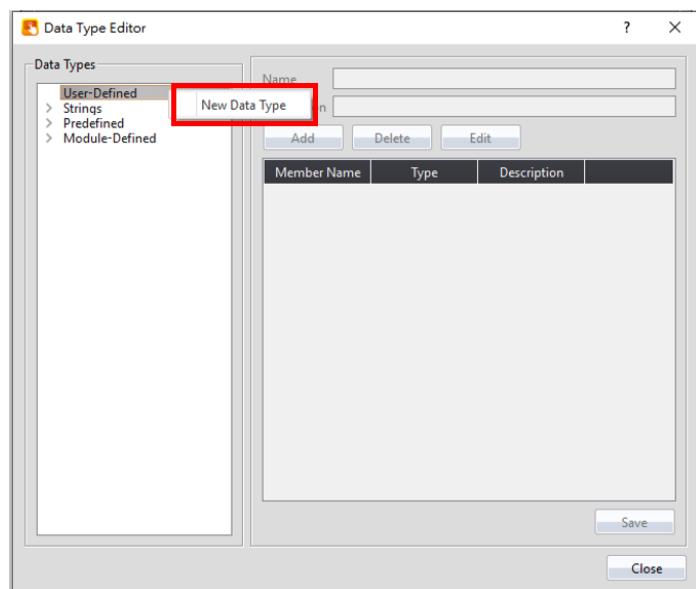

Step 4. After selecting the file, if there are no errors, it will show that the import was successful. Otherwise, the tag in question and the reason why it cannot be imported will be displayed

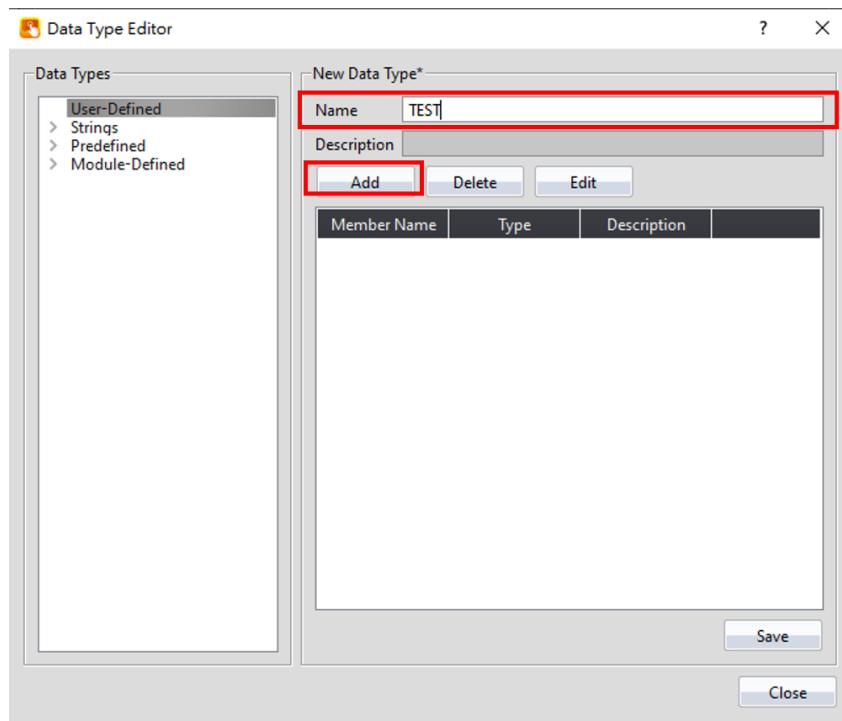

### Step 5. Press Edit Data Type

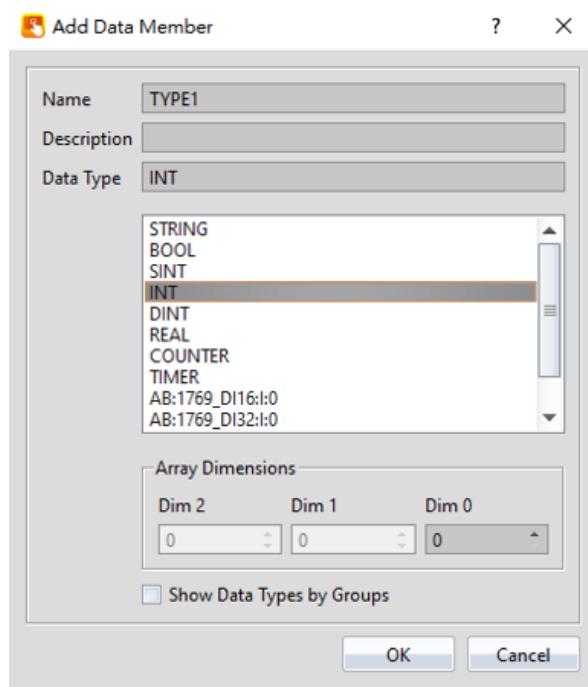

### Step 6. Right click and select Add Data Type

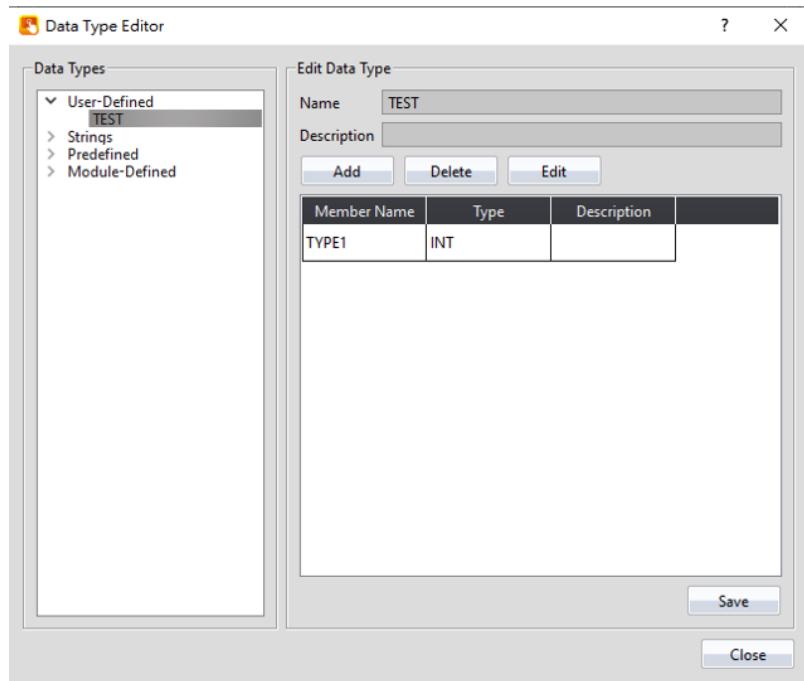

Step 7. After editing the name, press Add to add a new member structure.

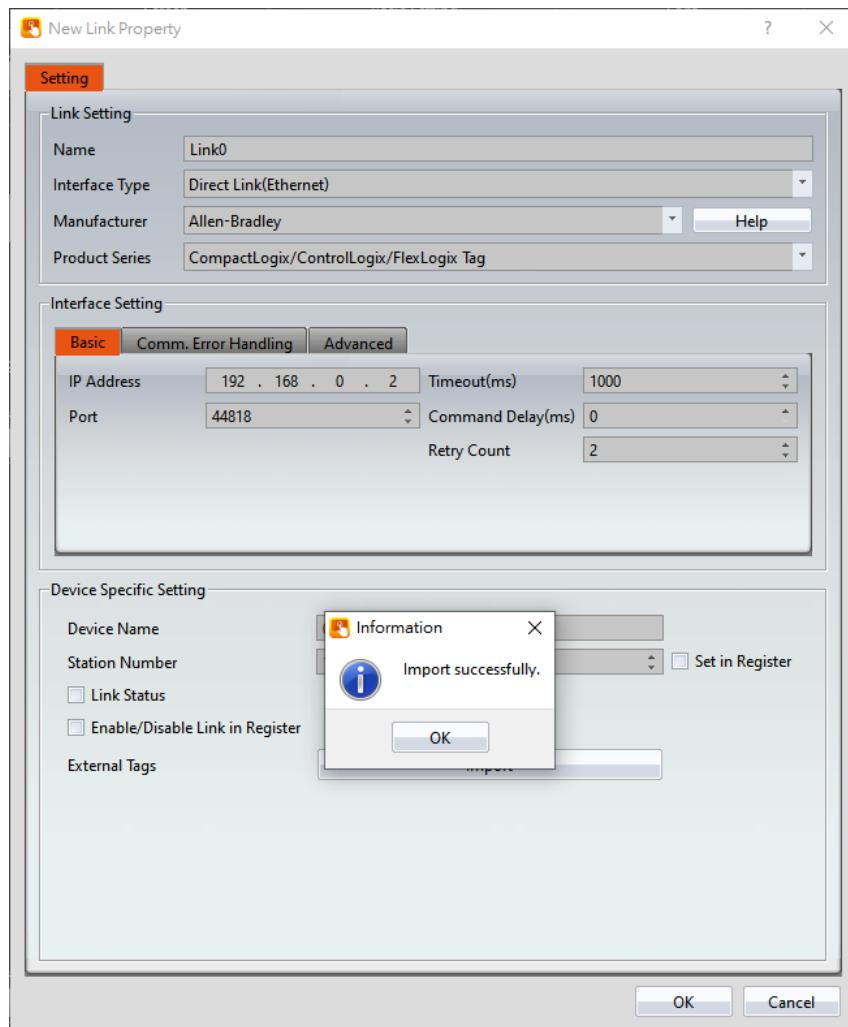

Step 8. Edit the name, select the data type and press OK

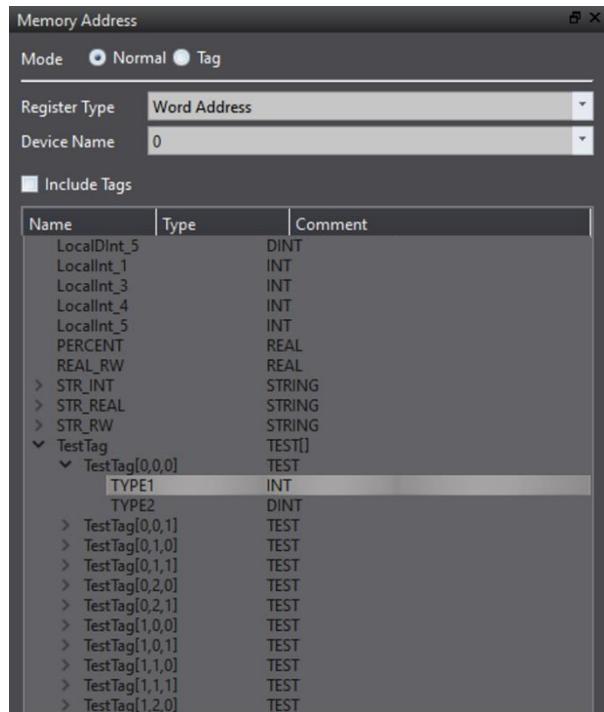

Step 9. After editing the members, press Save. If there are no errors, this data type will be displayed on the left. Press close and then go back to step 3 to import the tag.  
If you edit the data type, you need to press save to update.

Step 10. Show import success

Step 11. The successfully imported Tag can be seen in the memory address

## 2.7.2 SLC series (EtherNet/IP)

### 2.7.2.1 Communication Setting

Item	Default Setting	Remark
Signal Level	Ethernet	
Internet Protocol	192.168.0.1	
Port	44818	
Communication Method	EtherNet/IP	

### 2.7.2.2 PLC Resource Review

Device	Description	Data bit	Input format	Min.	Max.

### 2.7.2.3 Connecting to HMI

The SLC series PLC can be configured using the same procedure as the Micrologix series configuration. The figures refer to the Micrologix PLC but the procedure is the same.

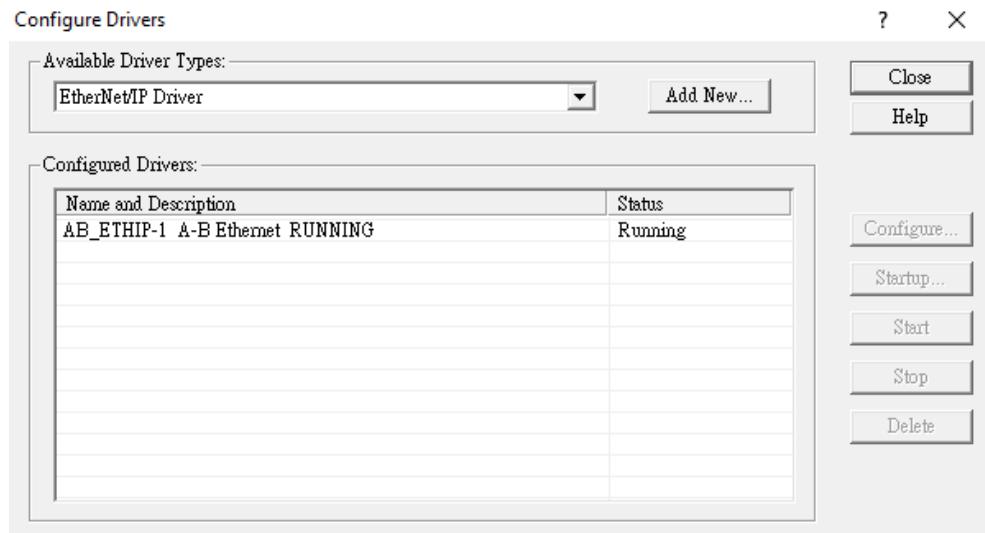

#### **Configuring IP Address on PLC**

If the IP address needs to be configured, follow the steps below.

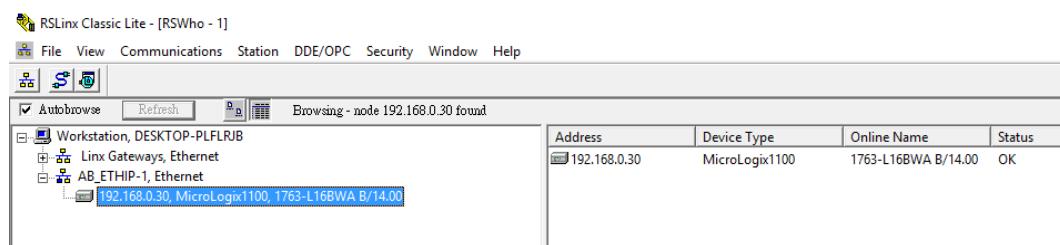

Use the applications **RSLinx Classic Lite** and **RSLogix 500** to configure the IP address of the PLC.

First open **RSLinx Classic Lite** to set up a connection between the computer and PLC.

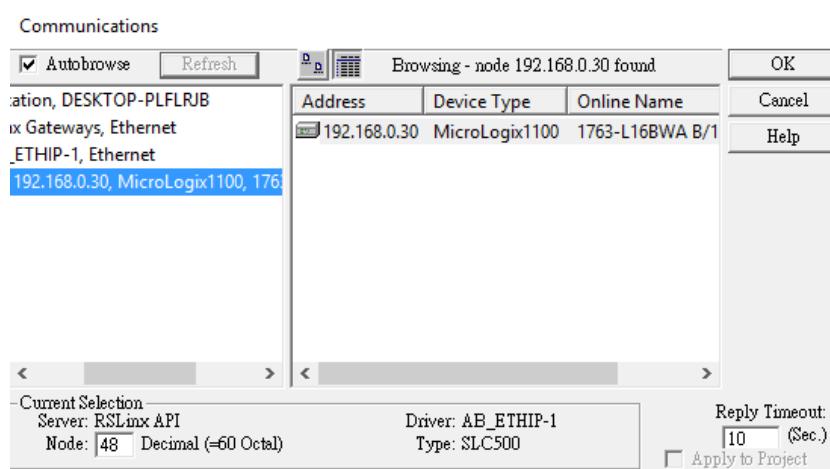

An Ethernet cable needs to be connected to the PLC and the computer must be online. In the **Communications** menu tab, select **Configure Drivers**. Select **EtherNet/IP Driver** and press ‘Add New’. Select “Your Network Interface Card” and press OK. Start the Driver and close out of the dialog window.

Under the new Ethernet driver, the PLC connected to the local network should be visible. If the status of the device is OK, open up **RSLogix 500**.

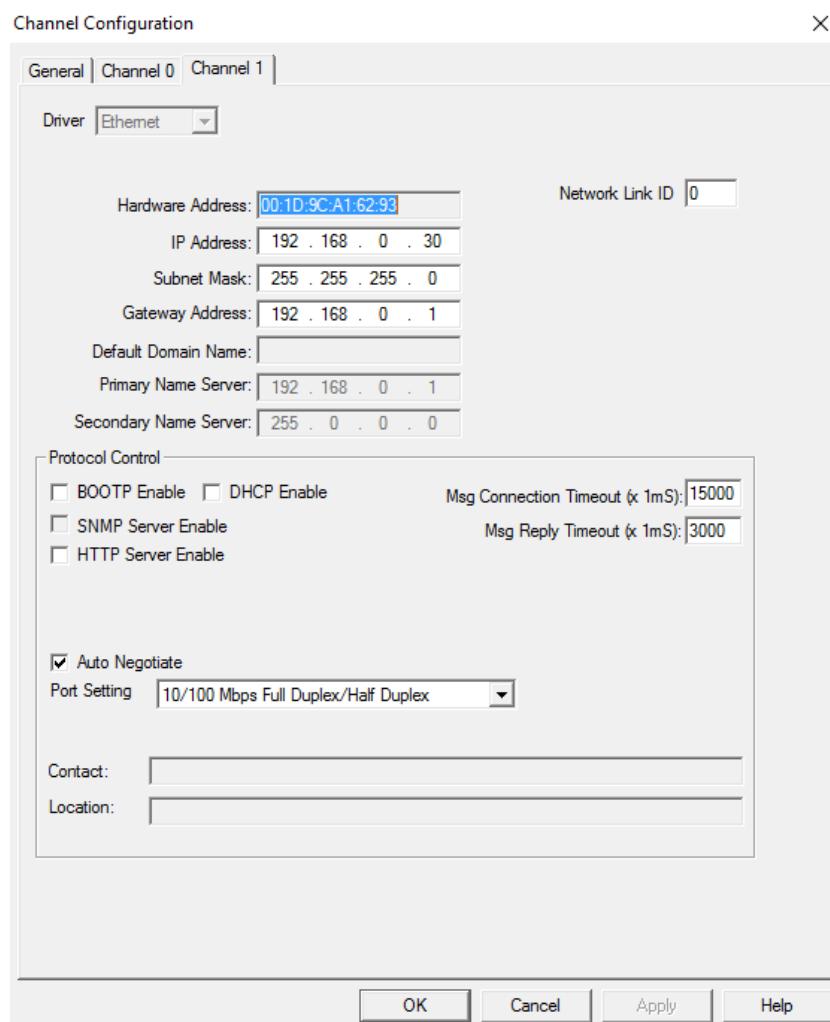

In RSLogix 500, under the **Comms** menu option, select **Who Active go Online**. In the dialog window that appears, select the PLC device connected through RSLinx.

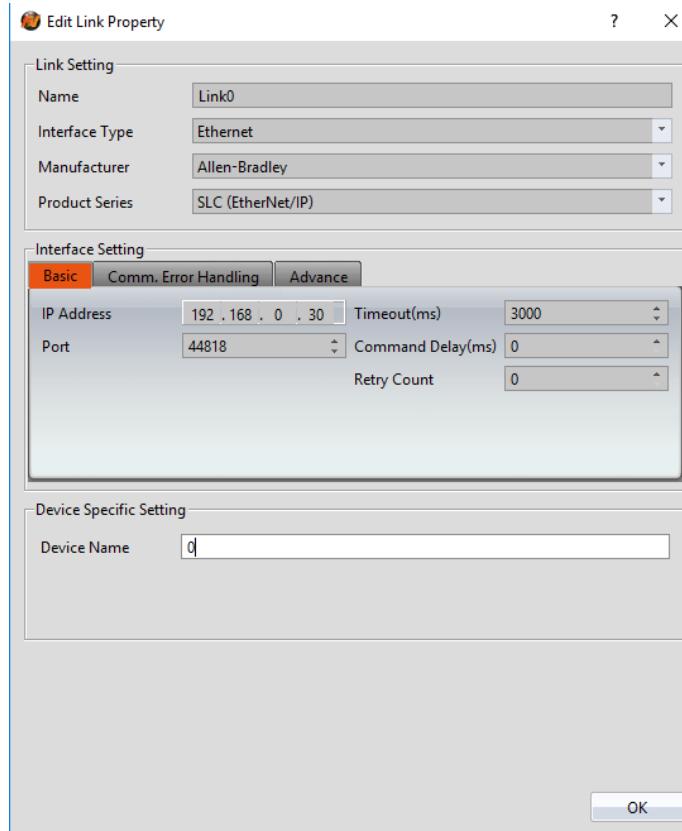

Press **Create New File** in the dialog window that appears after pressing OK.

On the left side of the program, double click **Channel Configuration** to access the PLC's Ethernet settings. Under the Channel 1 tab, the IP address can be changed.

Note: For more detailed information please refer to the PLC manual.

### **Connect PLC to HMI**

Within the **Link** configuration window in FvDesigner:

Under **Interface Type** select Ethernet

Under **Manufacturer** select Allen-Bradley

Under **Product Series** select SLC (Ethernet/IP)

Enter the **IP Address** that was written into the PLC.

Keep the **Port** at the default setting.

### **2.7.3 SLC Series**

#### **2.7.3.1 Communication Setting**

Item	Default Setting	Remark
Signal Level	RS232	
Baud Rate	19200	
Data Length	8	

Stop Bit	1	
Parity	None	
PLC Station No.	1	
TX Control	CRC	CRC/BCC
Communication Method	DF1	

#### 2.7.3.2 PLC Resource Review

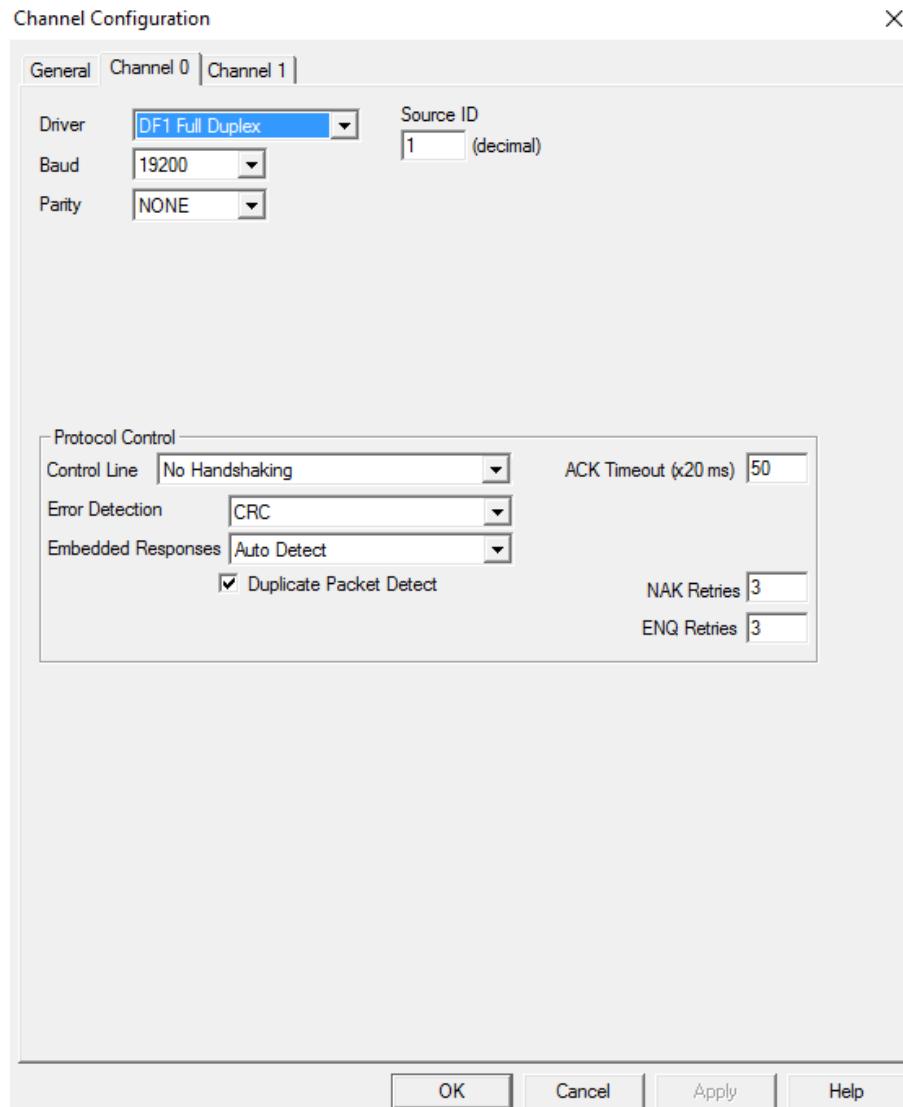

Device	Description	Data bit	Input format	Min.	Max.
O	Output File	1/16	O F:S.D	O0:0.0	O0:30.255
I	Intput File	1/16	I F:S.D	I1:0.0	I1:30.255
S	Status File	1/16	S F:E	S2:0	S2:163

ST	String File	1/16	ST F:E.D	ST9:0.0	ST255:255.41

#### 2.7.3.3 Connecting to HMI

##### Configuring the PLC

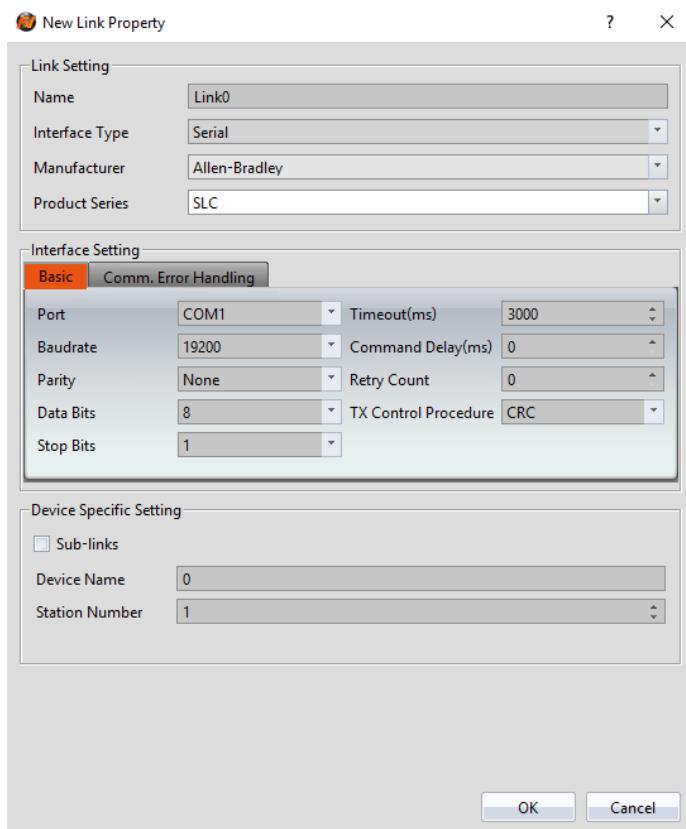

Use **RSLinx Classic Lite** and **RSLogix 500** to configure the port of the PLC.

Under the Project Sidebar, expand **Channel Configuration**. And expand **Channel 0** tab, Configure it to the settings detailed below.

Note: For more detailed information please refer to the PLC manual.

### **Connecting PLC to HMI**

Within the **Link** configuration window in FvDesigner:

Under **Interface Type** select Serial

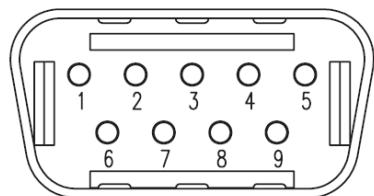

Under **Manufacturer** select Allen-Bradley

Under **Product Series** select SLC.

Verify the parameters match the window above.

#### 2.7.4.3 Connecting to HMI

##### Configuring IP Address on PLC

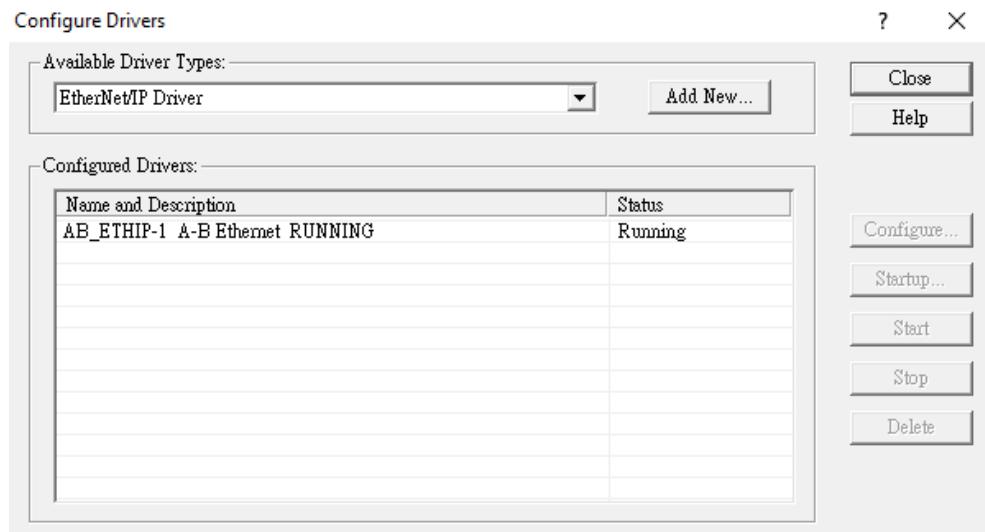

If the IP address needs to be configured, follow the steps below.

Use the applications **RSLinx Classic Lite** and **RSLogix 500** to configure the IP address of the PLC.

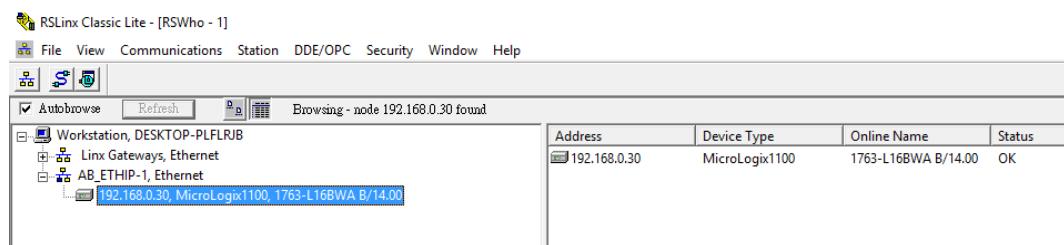

First open **RSLinx Classic Lite** to set up a connection between the computer and PLC.

An Ethernet cable needs to be connected to the PLC and the computer must be online.

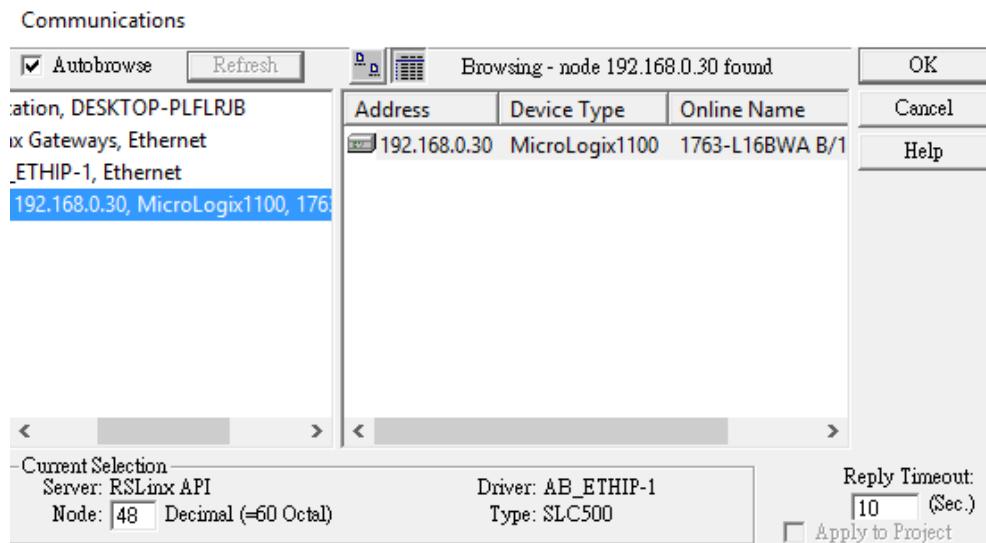

In the **Communications** menu tab, select **Configure Drivers**. Select **EtherNet/IP Driver** and press ‘Add New’. Select “Your Network Interface Card” and press OK. Start the Driver and close out of the dialog window.

Under the new Ethernet driver, the PLC connected to the local network should be visible. If the status of the device is OK, open up **RSLogix 500**.

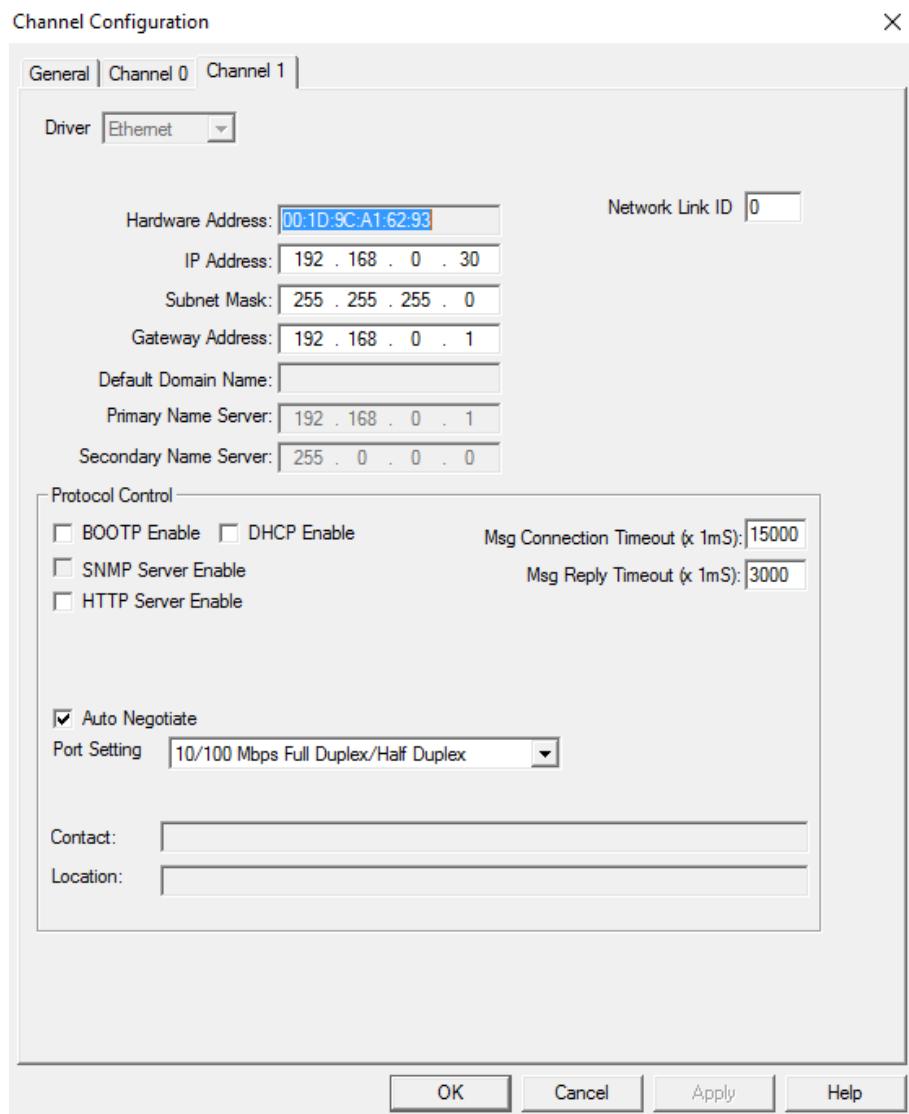

In RSLogix 500, under the **Comms** menu option, select **Who Active go Online**. In the dialog window that appears, select the PLC device connected through RSLinx.

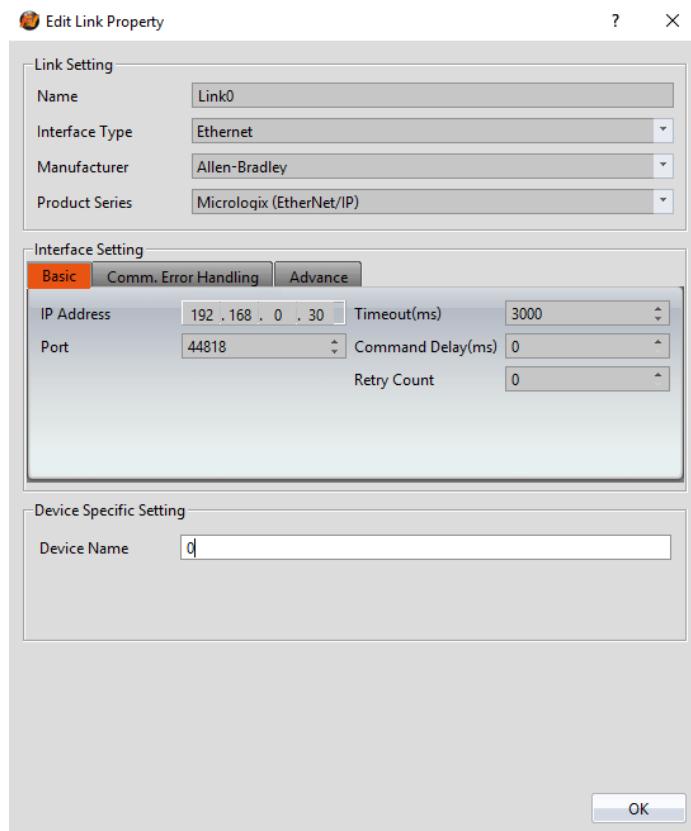

Press **Create New File** in the dialog window that appears after pressing OK.

On the left side of the program, double click **Channel Configuration** to access the PLC's Ethernet settings. Under the Channel 1 tab, the IP address can be changed.

Note: For more detailed information please refer to the PLC manual.

**Connect PLC to HMI**

Within the **Link** configuration window in FvDesigner:

Under **Interface Type** select Ethernet

Under **Manufacturer** select Allen-Bradley

Under **Product Series** select Micrologix (Ethernet/IP)

Enter the **IP Address** that was written into the PLC.

Keep the **Port** at the default setting.

## 2.7.5 MicroLogix Series

### 2.7.5.1 Communication Setting

Item	Default Setting	Remark
Signal Level	RS232	
Baud Rate	19200	
Data Length	8	
Stop Bit	1	
Parity	None	
PLC Station No.	1	
TX Control	CRC	CRC/BCC

Communication Method	DF1 Protocol	
----------------------	--------------	--

#### 2.7.5.2 PLC Resource Review

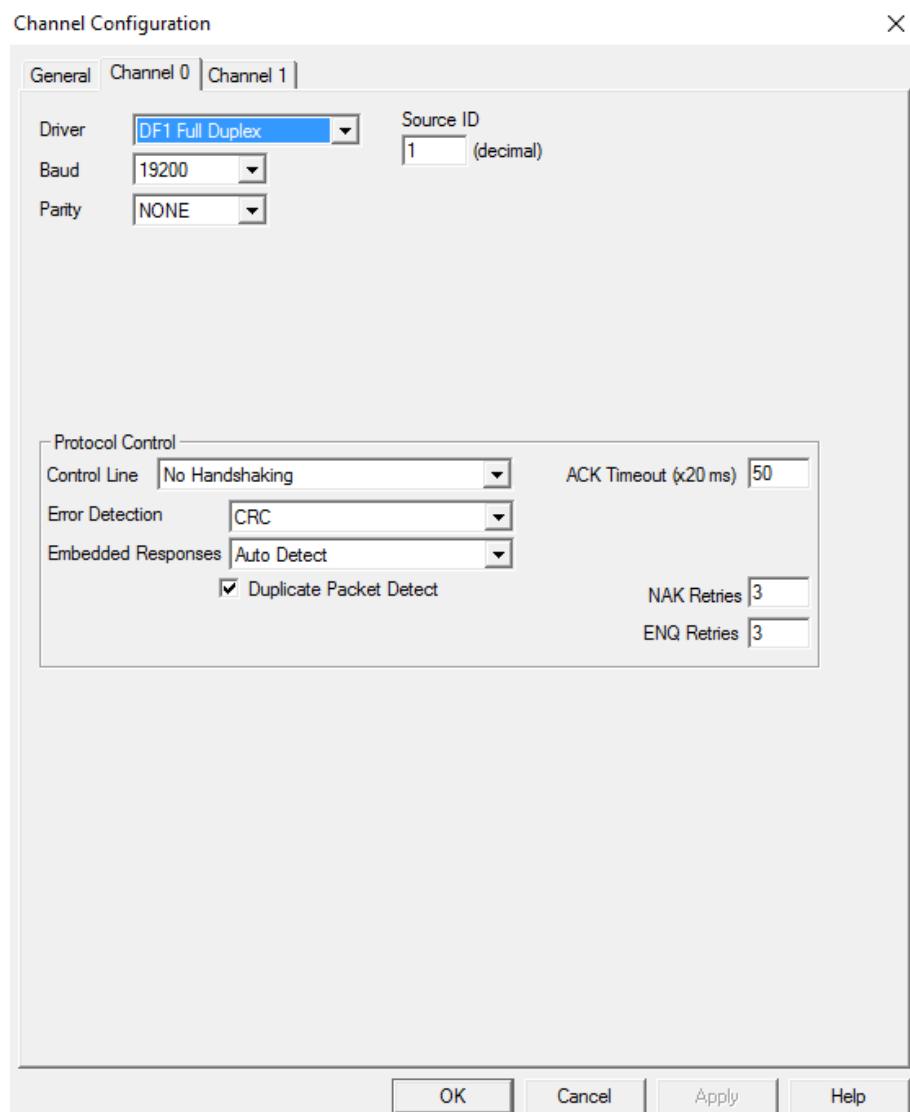

Device	Description	Data bit	Input format	Min.	Max.
O	Output File	1/16	O F:S.D	O0:0.0	O0:30.255
I	Intput File	1/16	I F:S.D	I1:0.0	I1:30.255

#### 2.7.5.3 Connecting to HMI

##### Configuring the PLC

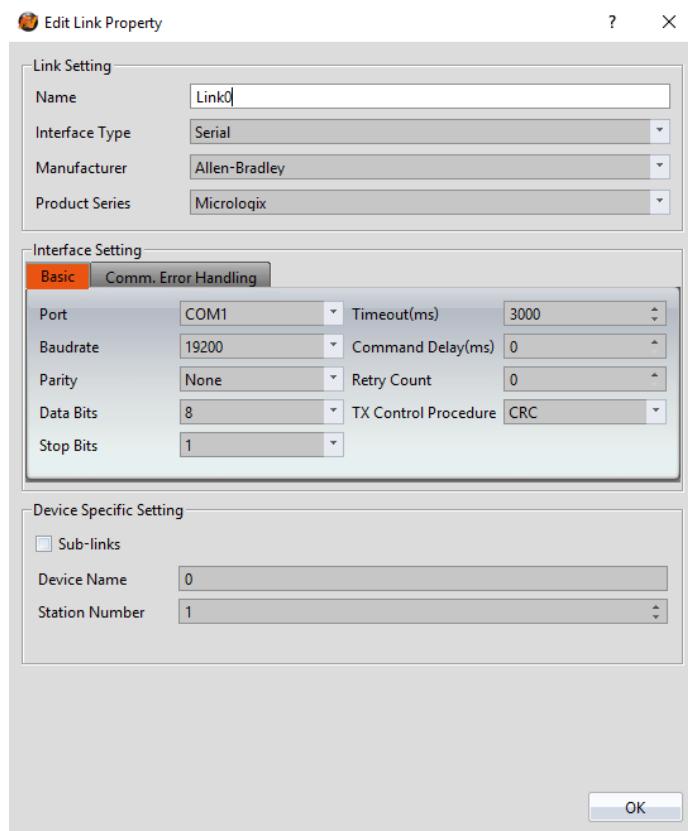

To connect the PLC to a computer, follow the same steps detailed in the previous chapter. Configuring the serial connection of the PLC is the same as configuring the IP address of the PLC.

Double click **Channel Configuration** and navigate to the Channel 0 tab. Here, the serial connection settings can be adjusted if needed.

Note: For more detailed information please refer to the PLC manual.

### **Connecting PLC to HMI**

Within the **Link** configuration window in FvDesigner:

Under **Interface Type** select **Serial**

Under **Manufacturer** select **Allen-Bradley**

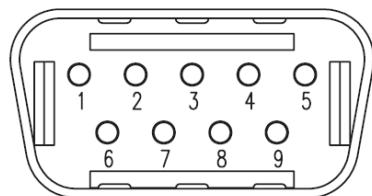

Under **Product Series** select **Micrologix**

Under **Port** select **COM1**

Verify the other parameters are consistent with the ones set on the PLC.

### 2.9.2.3 Connecting to HMI

### **Configuring the PLC**

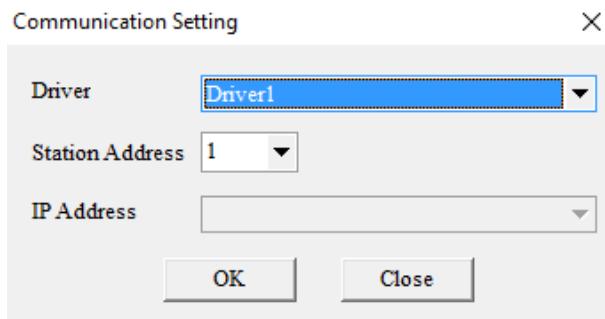

Use the application **ISPSoft** (Ver. 2.05) to configure the PLC. The application **COMMGR** is used to establish the connection between the PLC and the computer.

Open **COMMGR**. The application opens in the system tray. Double click the icon to open it.

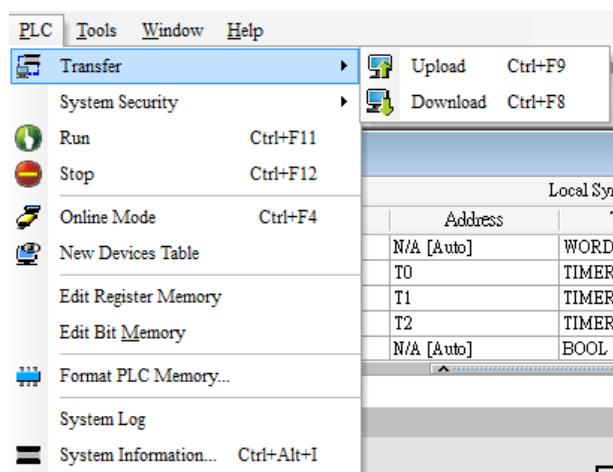

In Device Manager, verify the port number the PLC is connected to. In COMMGR, press **Add** and for **Connection Setup**, select RS232/422/485 for type. Select the port number the PLC is connected to for the **COM Port** setting. Press **Auto-detect** and the application will automatically adjust the rest of the parameters.

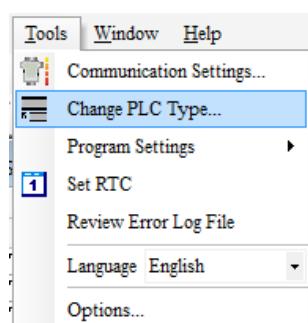

In **ISPSoft**, under the **Tools** menu option, select **Communication Settings**. Select the name of the connection configured in COMMGR and press OK.

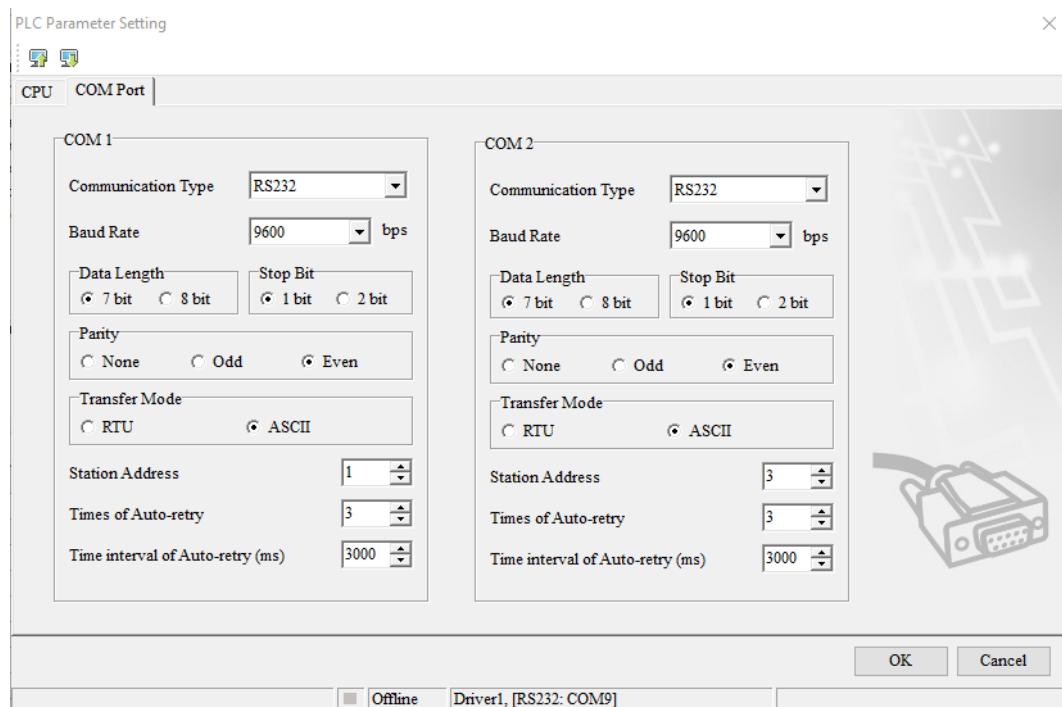

Under the **PLC** menu option, select **Transfer** and **Upload**. If there is a program on the PLC, it will be uploaded and the system settings can be configured. If there is no program present on the PLC one will have to be downloaded.

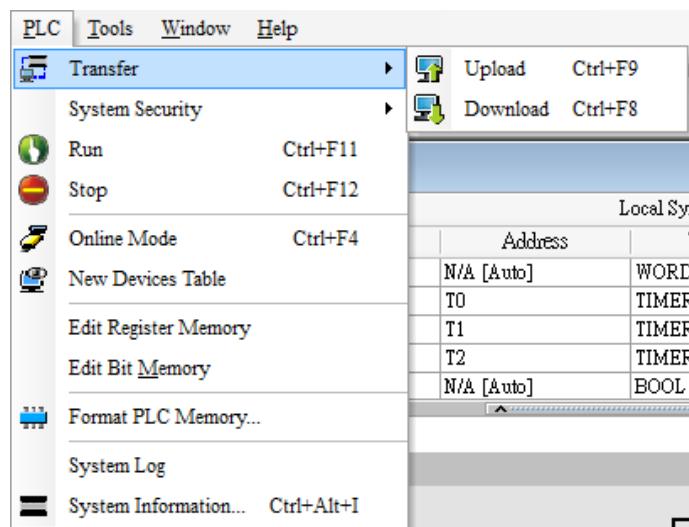

If program has to be downloaded onto the PLC, press open and select a program. In the active folder, there are example programs. The device associated with the example program may not be the same as the device connected. Under **Tools**, select **PLC Type** and select the device currently used. Once a program is opened, the PLC settings can be configured.

In the Project sidebar, double click **HWCONFIG**. Double click the **CPU** module and navigate to the **COM Port** tab in the settings dialog. Adjust communication parameters and press OK to confirm the settings.

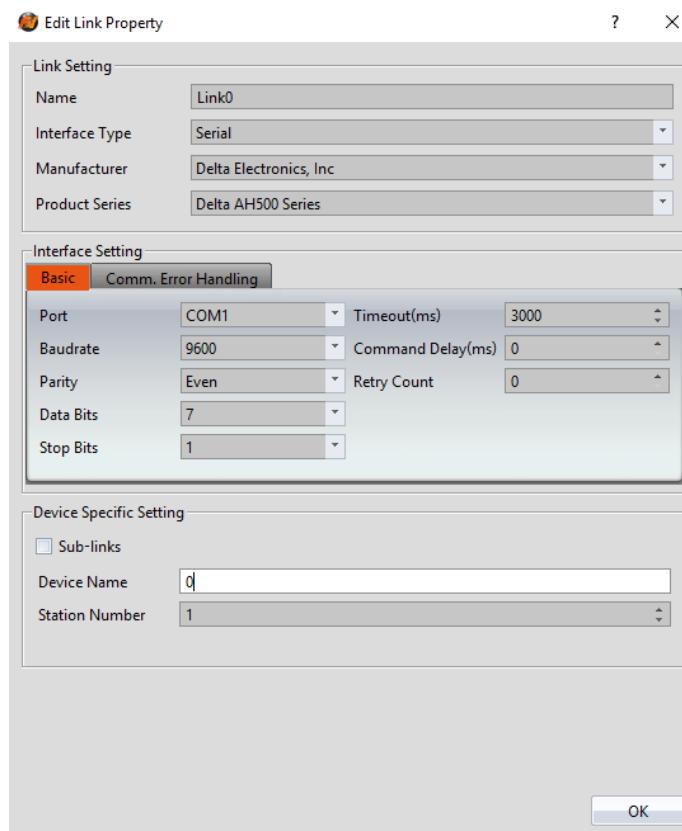

Under the **PLC** menu option, the program and PLC configurations can be downloaded onto the device.

Note: For more detailed information please refer to the PLC manual.

### Connecting PLC to HMI

Within the **Link** configuration window in FvDesigner:

Under **Interface Type** select **Serial**

Under **Manufacturer** select **Delta Electronics, Inc**

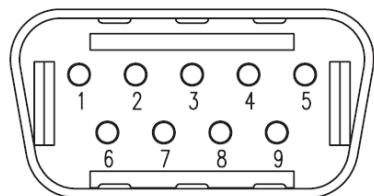

Under **Product Series** select **Delta AH500 Series**

Select the appropriate **Port** to establish connection with the PLC.

Verify the other parameters are configured correctly.

### 2.10.1.3 Connecting to HMI

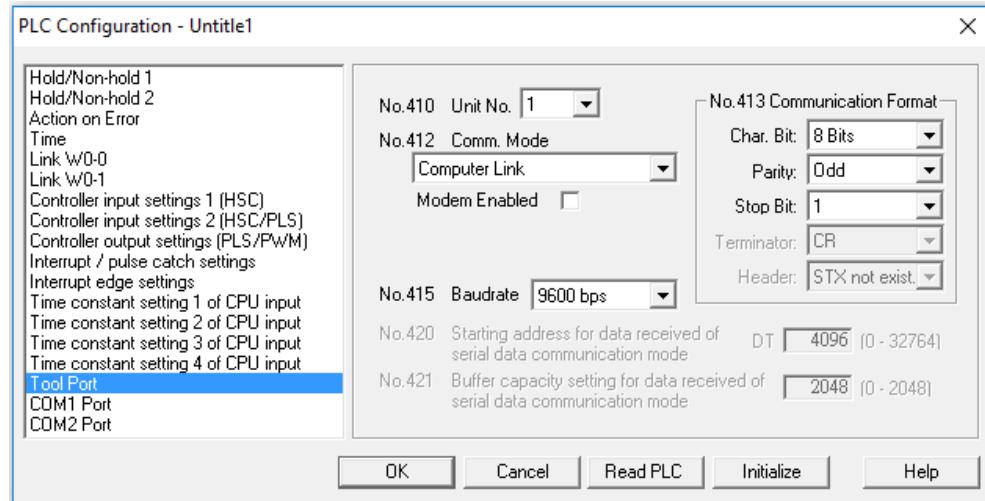

#### Configuring the PLC

If the PLC does not connect based on the default communication settings, configuration of the PLC settings is needed.

**Within FPWIN GR:**

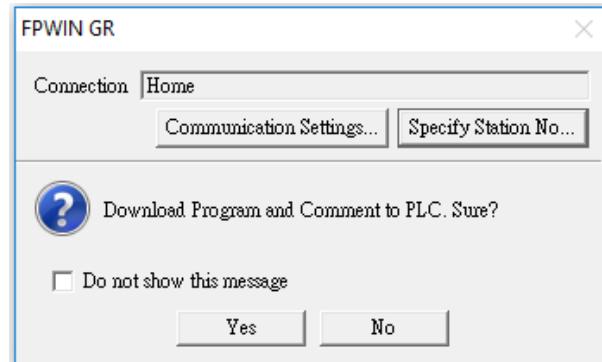

Connect the PLC to the computer via USB and navigate to the **Online** menu option and switch to **Online Editing Mode**.

Navigate to the **Option** menu option and select **PLC Configuration**.

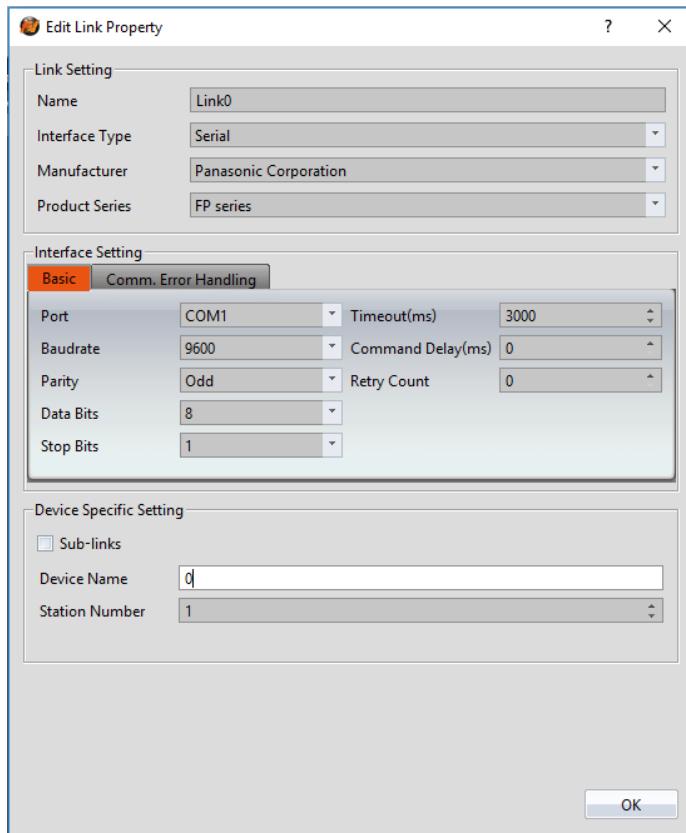

Go to the **Tool Port** option in the sidebar and select **Read PLC** to see the current PLC settings. Change the settings needed to be changed and press **OK**.

Navigate to the **File** menu option and select **Download to PLC** to save the settings to the PLC.

Note: For more detailed information please refer to the PLC manual.

**Connecting PLC to HMI**

Within the **Link** configuration window in FvDesigner:

Under **Interface Type** select Serial

Under **Manufacturer** select Panasonic Corporation

Under **Product Series** select FP Series

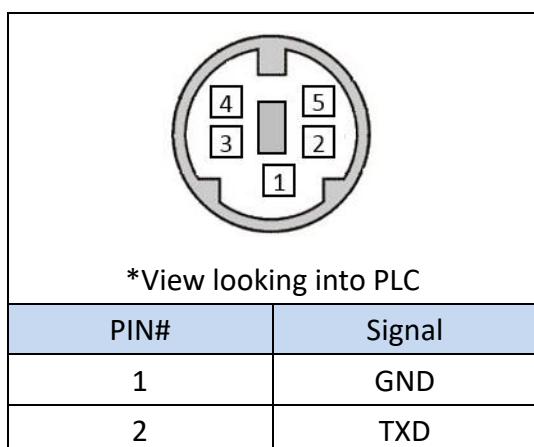

Select **COM1** for the port

Select **1** for the station number

Verify the other settings are consistent with the settings on the PLC.

### 2.10.2.3 Connecting to HMI

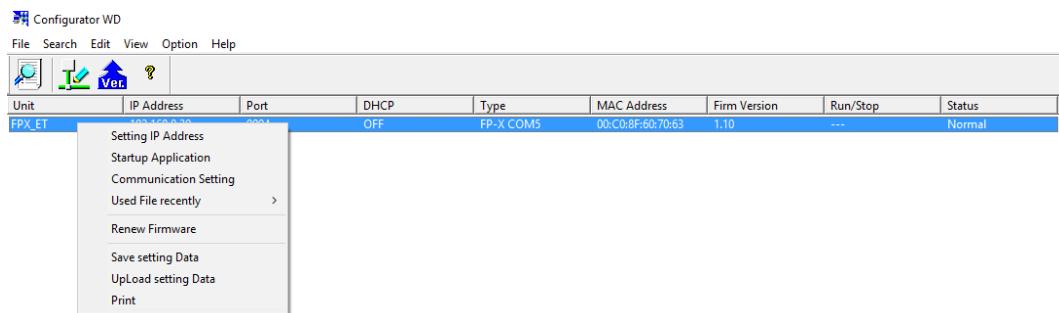

#### Configuring IP Address on PLC

Use the application Configurator WD to view/change the IP address on the PLC.

Press the **Search Unit** to search for the PLC on the local network. Right click the PLC and press **Setting IP Address** to change the IP address if needed.

Right click the PLC and press **Communication Setting** to change the port if necessary.

Note: For more detailed information please refer to the PLC manual.

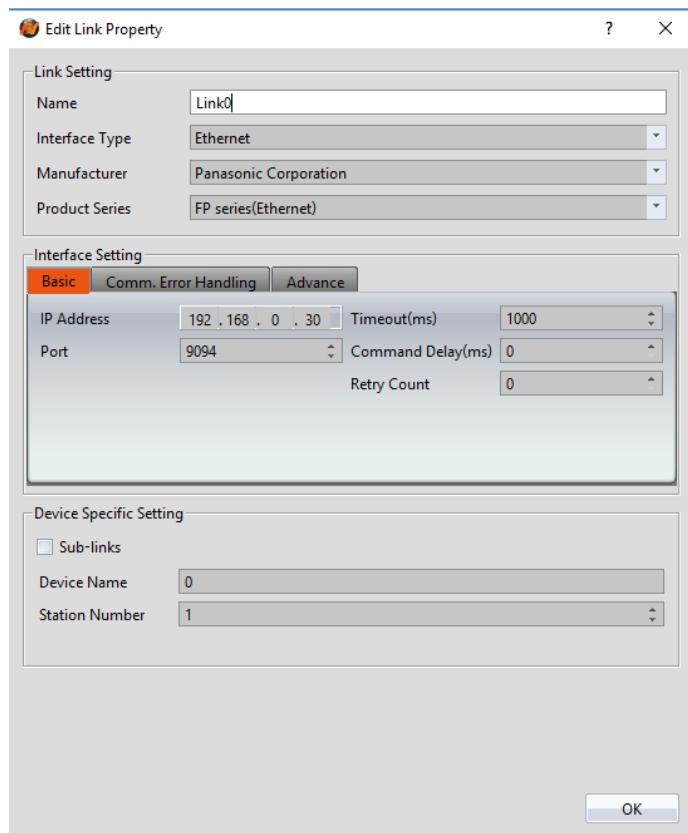

#### Connecting PLC to HMI

Within the **Link** configuration window in FvDesigner:

Under **Interface Type** select Ethernet

Under **Manufacturer** select Panasonic Corporation

Under **Product Series** select FP Series(Ethernet)  
 Enter the **IP Address** that was written into the PLC.  
 Enter the **Port** number that was set on the PLC.

### 2.12.1.3 Connecting to HMI

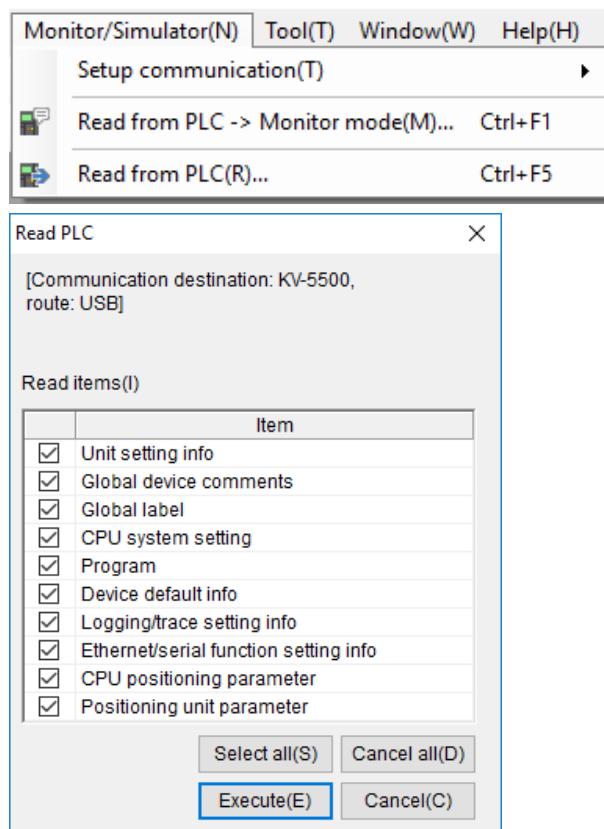

#### Configuring IP address on PLC

Use the application **KV Studio** to configure the IP address of the PLC.

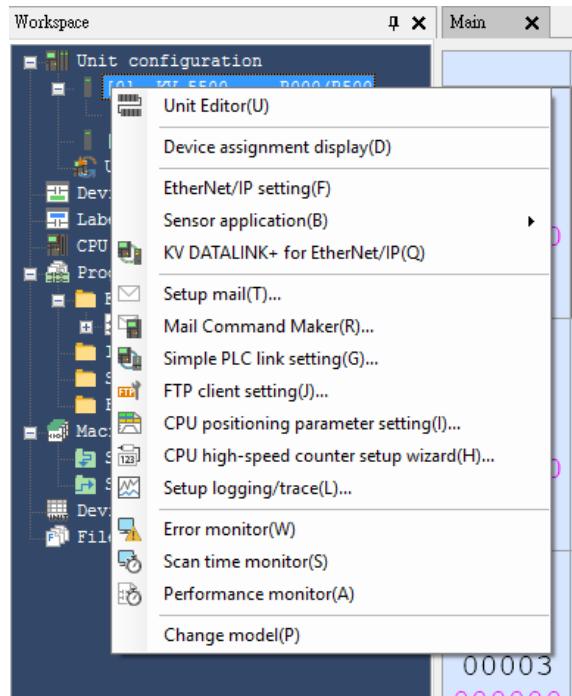

Select the connection between the PLC and the computer. A USB connection was used in this case.

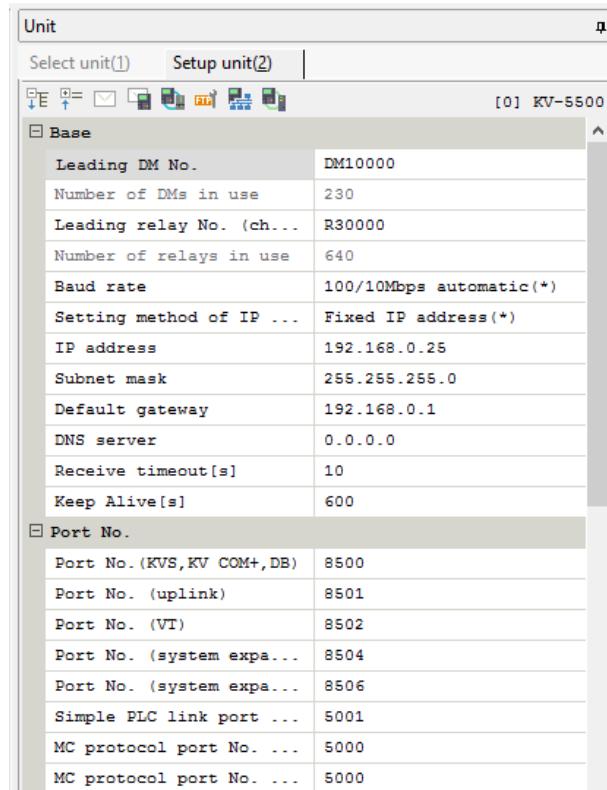

Under the **Monitor/Simulator** menu option, select **Read from PLC** and execute the operation.

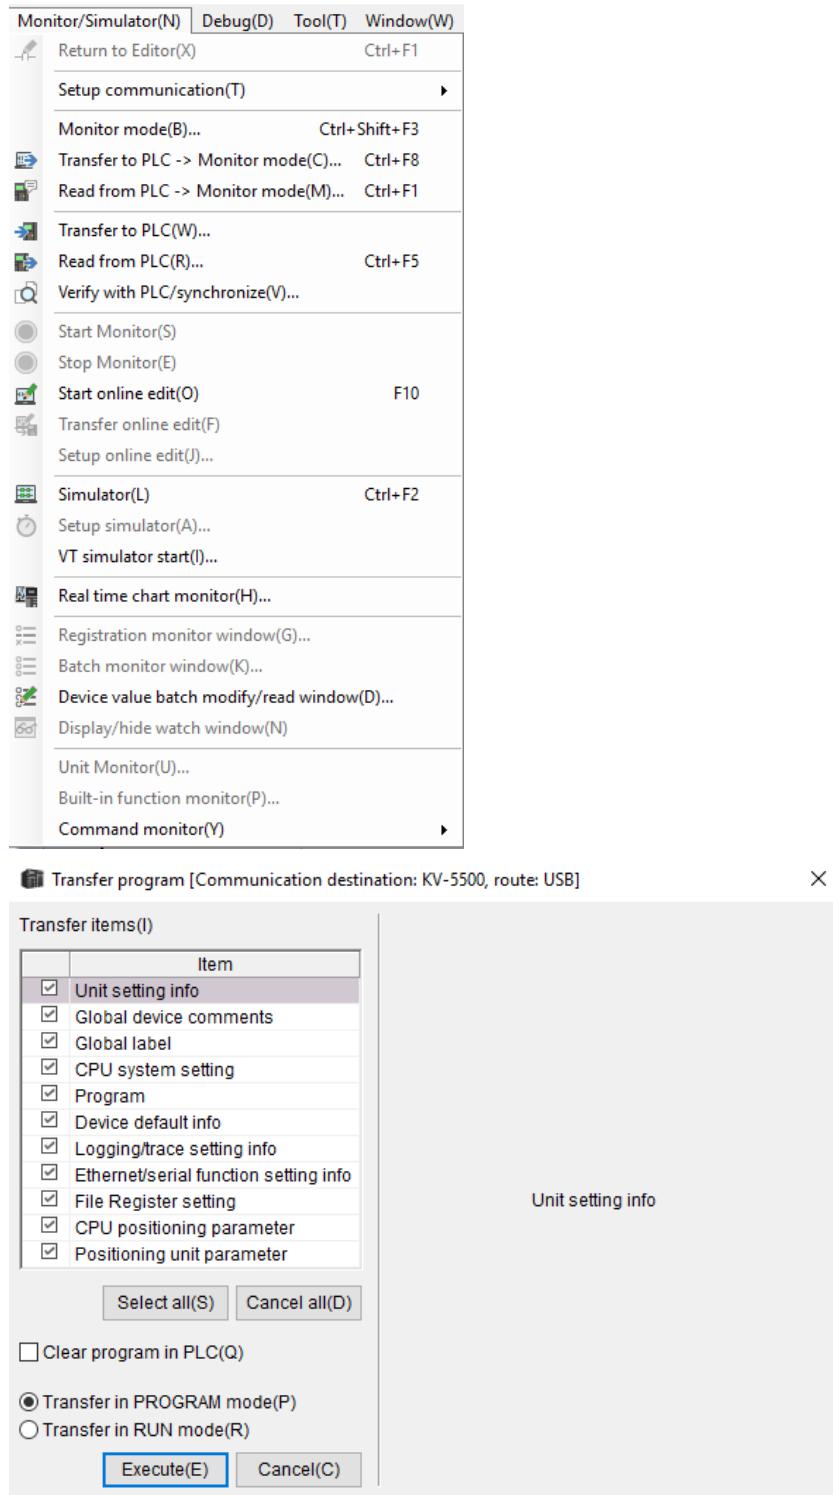

In the Workspace, right click the PLC model name and select **Unit Editor**.

On the right side of the dialog window, the IP address and Port can be changed. When done, close out of the window and select ‘Yes’ to save the settings.

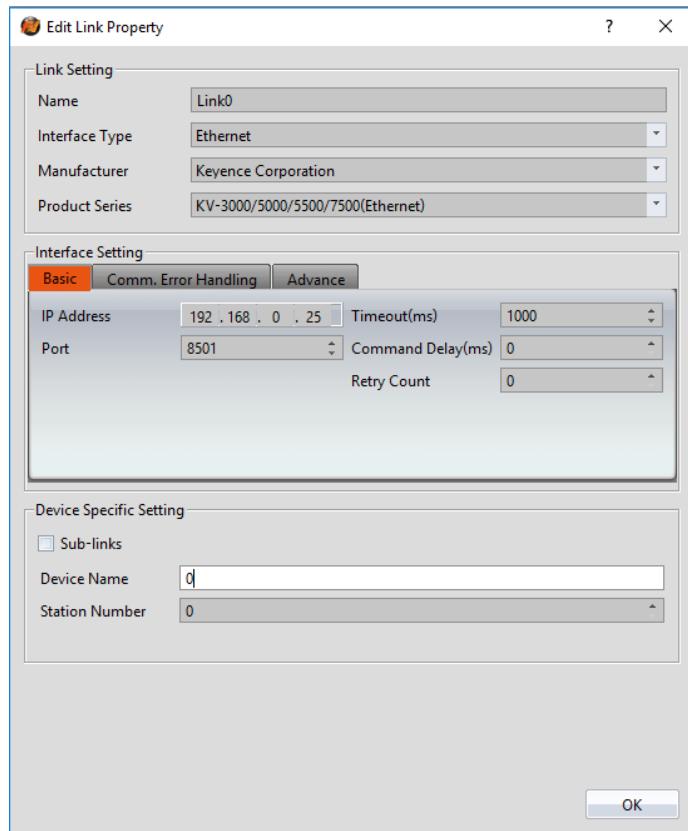

Under **Monitor/Simulator**, select **Transfer to PLC** to download the changes onto the PLC. Confirm the execution of the operation

Note: For more detailed information please refer to the PLC manual.

### **Connecting PLC to HMI**

Within the **Link** configuration window in FvDesigner:

Under **Interface Type** select Ethernet

Under **Manufacturer** select Keyence Corporation

Under **Product Series** select KV-3000/5000/5500/7500(Ethernet)

Set the **IP address** and **Port** to the values configured on the PLC.

## 2.12.2 KV-L21V/3000/5000/5500 (host link)

### 2.12.2.1 Communication Setting

### 2.12.2.3 Connecting to HMI

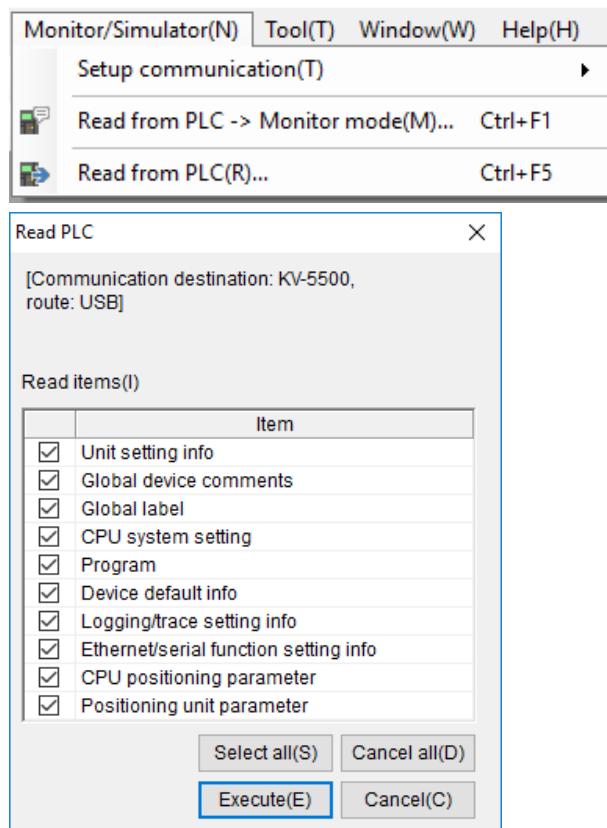

#### Configuring the PLC

Use the application **KV Studio** to configure the serial connection of the PLC.

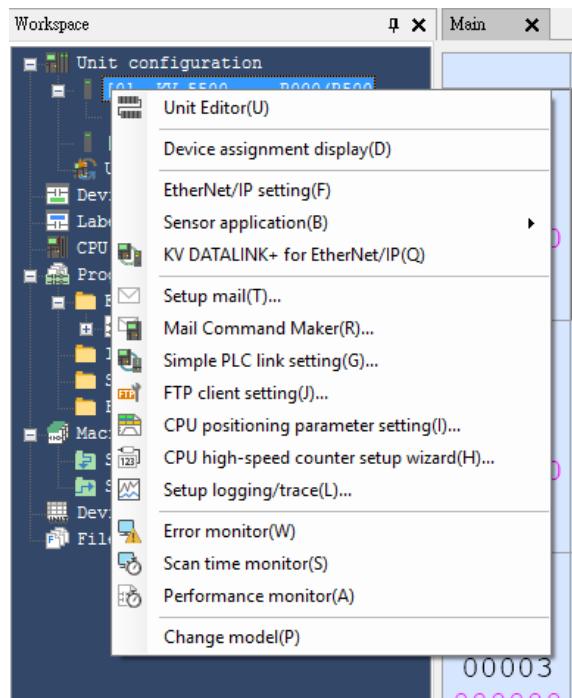

Select the connection between the PLC and the computer. A USB connection was used in this case.

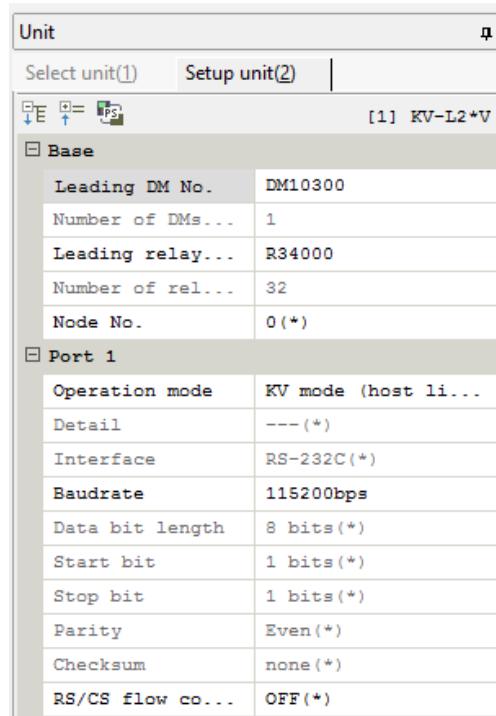

Under the **Monitor/Simulator** menu option, select **Read from PLC** and execute the operation.

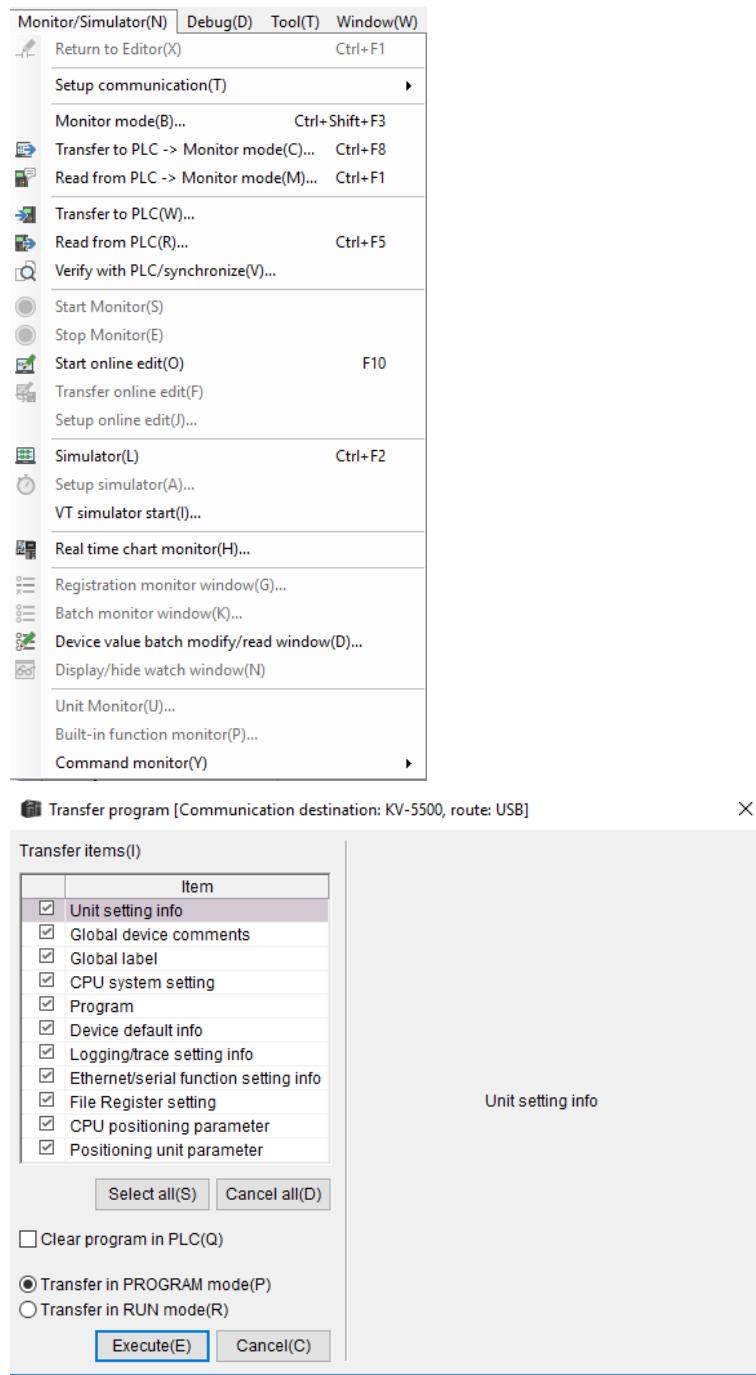

In the Workspace, right click the PLC model name and select **Unit Editor**.

On the right side of the dialog window, verify the baud rate is **115200bps**. Close out of the window and select 'Yes' to save the settings.

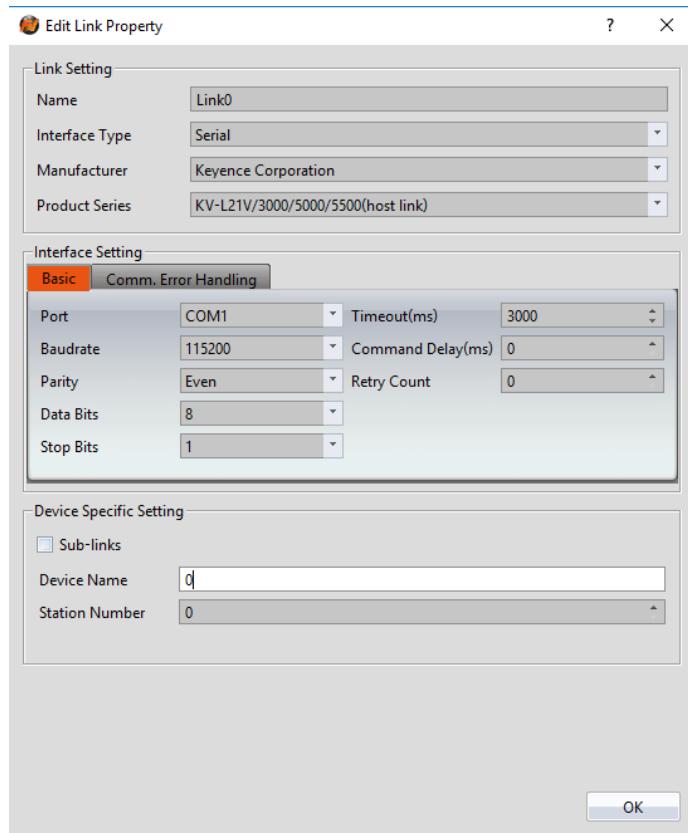

Under **Monitor/Simulator**, select **Transfer to PLC** to download the changes onto the PLC. Confirm the execution of the operation

Note: Port 2 of the PLC can also be configured following the steps above. The parameters for Port 2 are under the parameters for Port 1 in the dialog window.

Note: For more detailed information please refer to the PLC manual.

### **Connecting PLC to HMI**

Within the **Link** configuration window in FvDesigner:

Under **Interface Type** select **Serial**

Under **Manufacturer** select **Keyence Corporation**

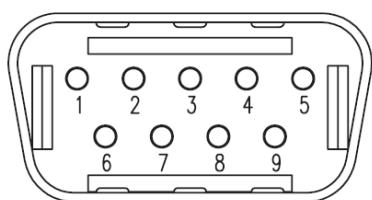

Under **Product Series** select **KV-L21V/3000/5000/5500(host link)**

Under **Port** select required COM port. Verify the baud rate is the same as the value set on the PLC.

#### 2.12.3.3 Connecting to HMI

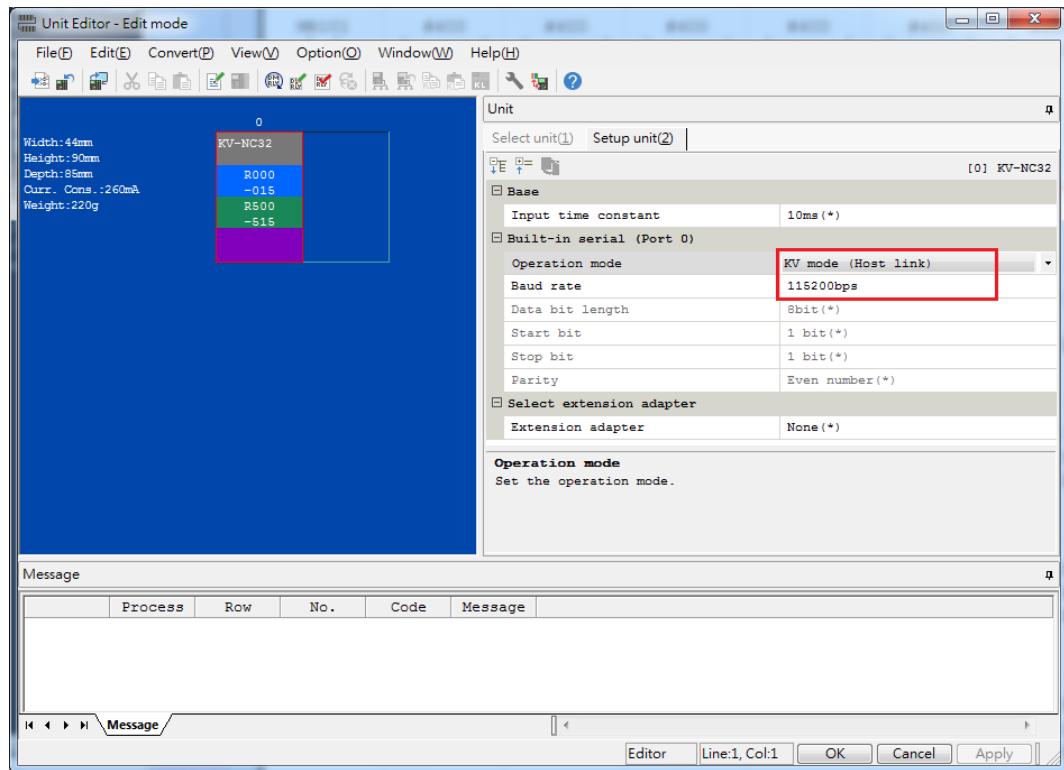

##### Configuring the PLC

Use the software KV Studio (ver. 9.02) to configure the PLC.

Right click the device in **Unit configuration** and select Unit Editor.

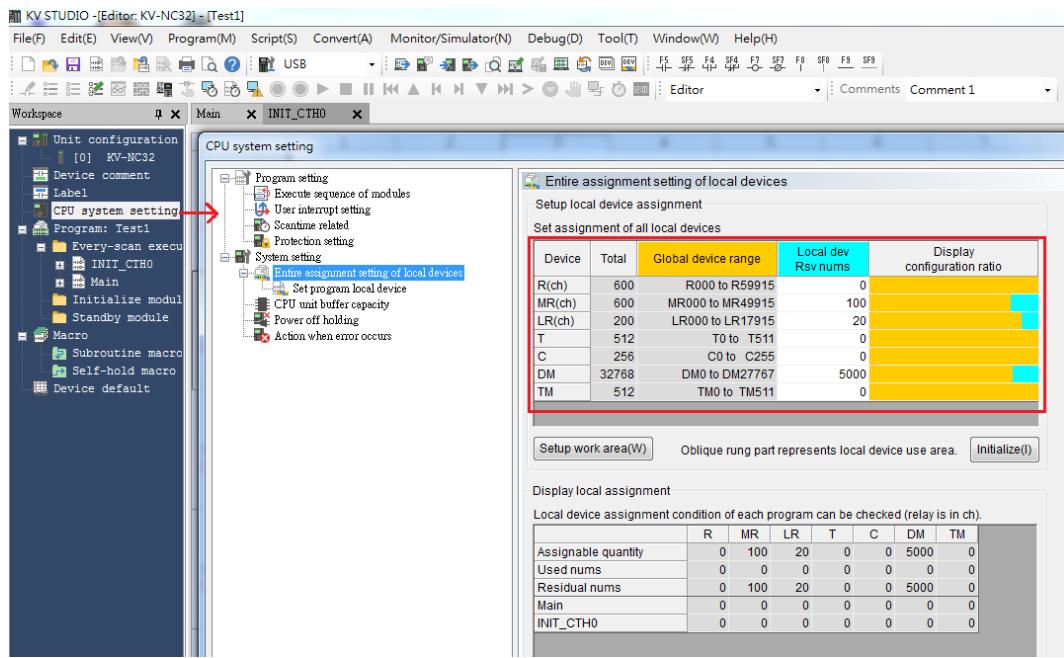

Choose **KV mode (Host Link)** and set the Baud rate to 115200.

Download the settings back onto the PLC and reset it.

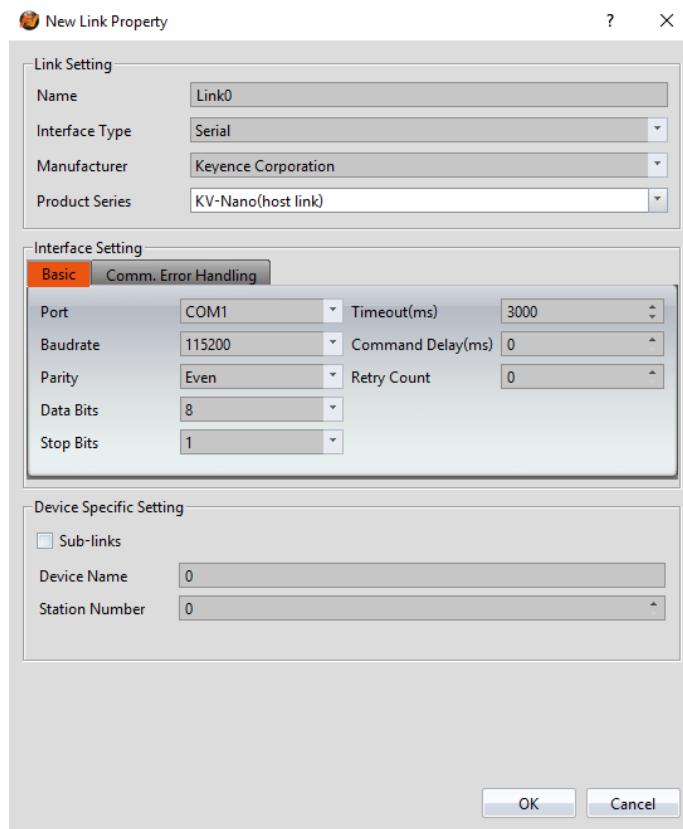

Required register ranges

Note: For more detailed information please refer to the PLC manual.

QD		32	DDDDD	0	65532
MD		32	DDDDD	0	65532

### 2.13.1.3 Connecting to PLC

#### Configuring the PLC

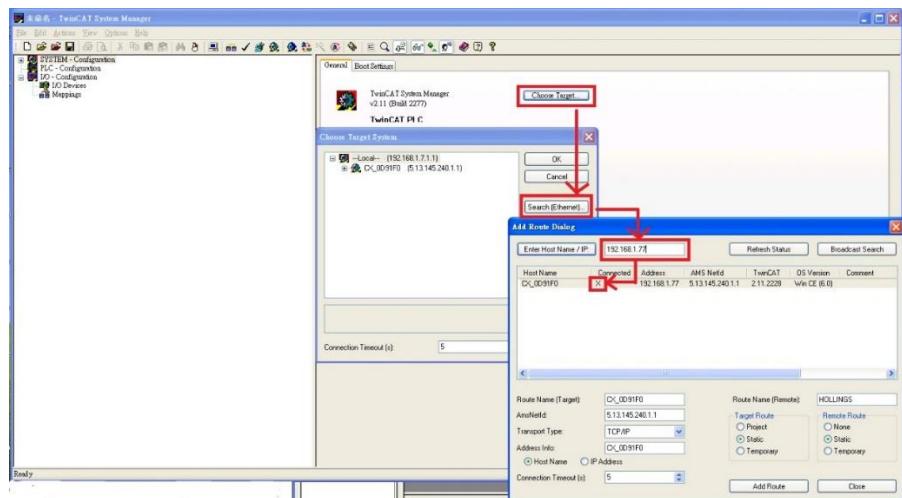

1. Set IP-Address connected with PC.

Open **TwinCAT System Control** , setting IP-Address of plc in TwinCAT System Properties

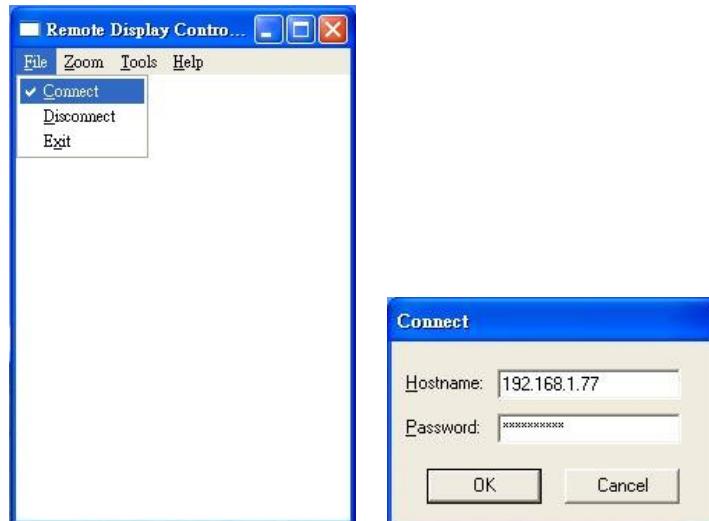

Open **TwinCAT system manager** build Route Table to ensure whether connecting success, if reopen plc, need to execute these steps.

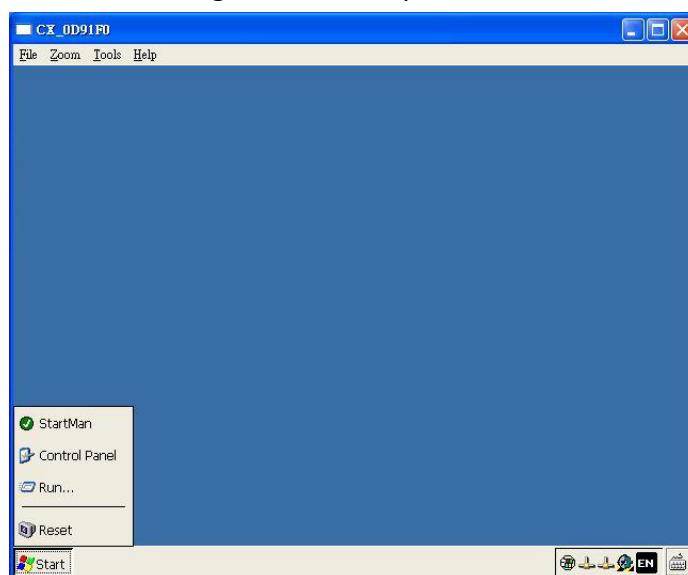

Note: when connecting success, display "x"

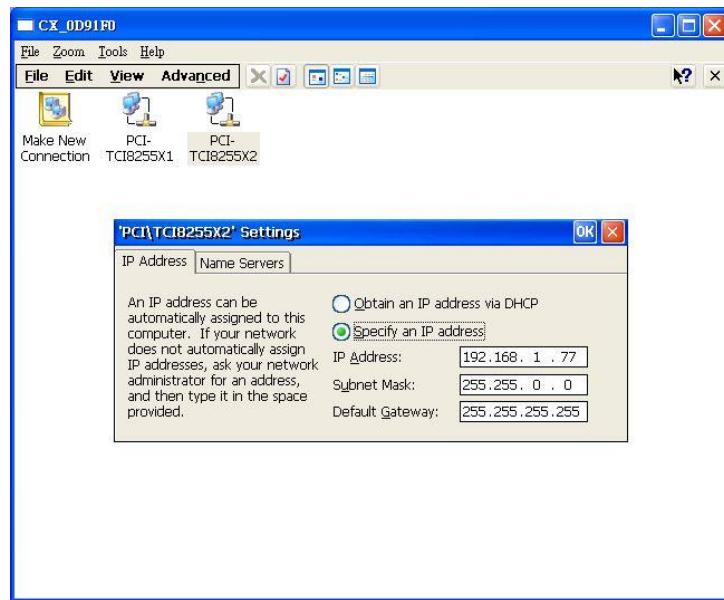

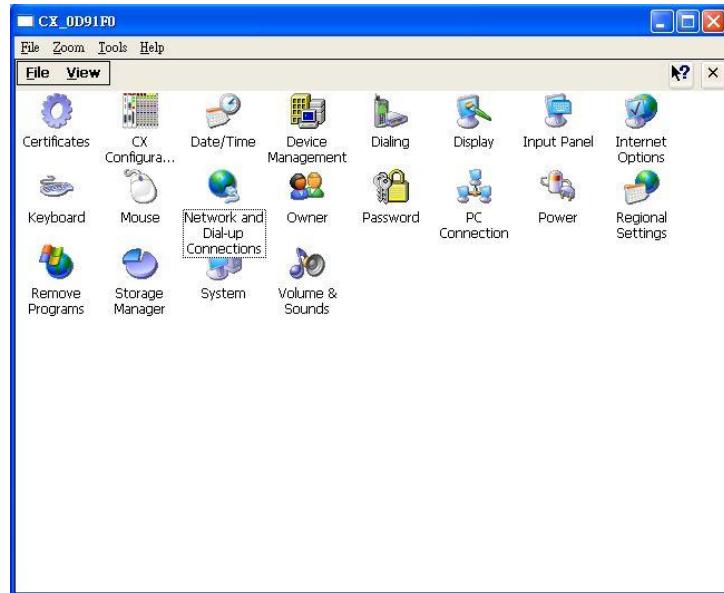

## 2. Use CERHOST to connect with plc, enter IP and Password of plc.

After connecting success with plc, click start→control panel

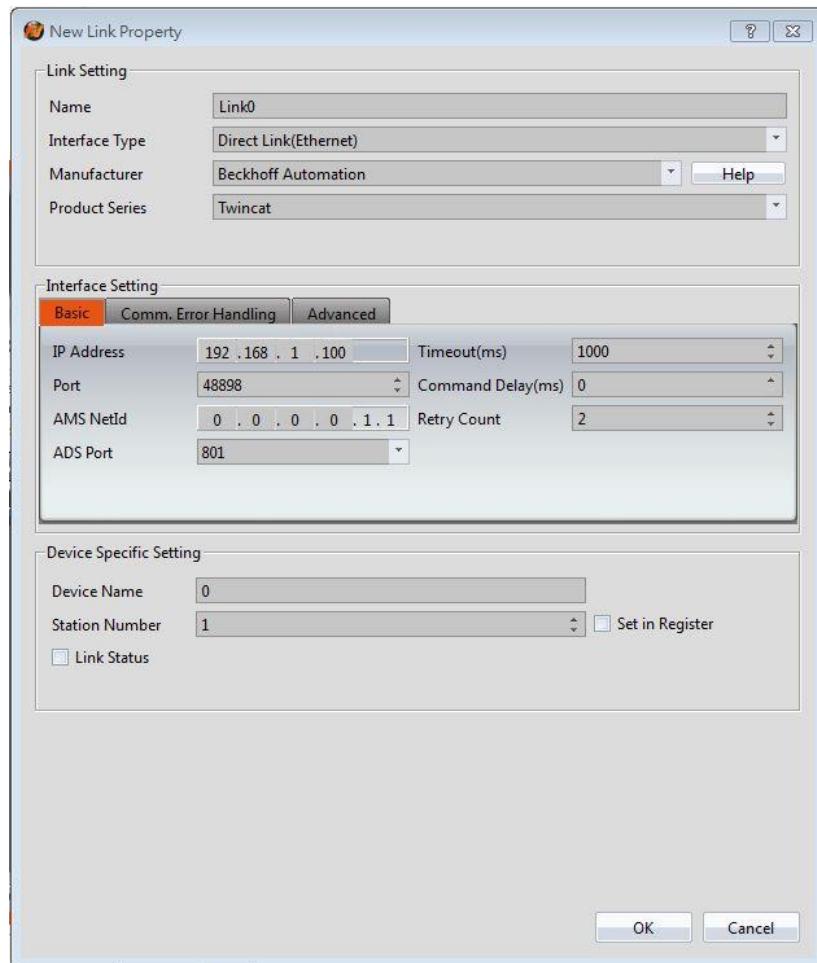

Click Network and Dial-up Connections, display information of plc, click plc to ensure the IP.

Note: For more detailed information please refer to the PLC manual.

### **Connecting PLC to HMI**

Within the **Link** configuration window in FvDesigner:

Under **Interface Type** select Serial

Under **Manufacturer** select FATEK Automation Corp.

Under **Product Series** select FATEK FBe

Under **Port** select the port corresponding to the connection to the PLC

Verify the other parameters are consistent with the settings on the PLC

## 2.14 Koyo

### 2.14.1 Direct

#### 2.14.1.1 Communication Setting

Item	Default Setting	Remark
Signal Level	RS232

#### 2.17.2.3 Connecting to HMI

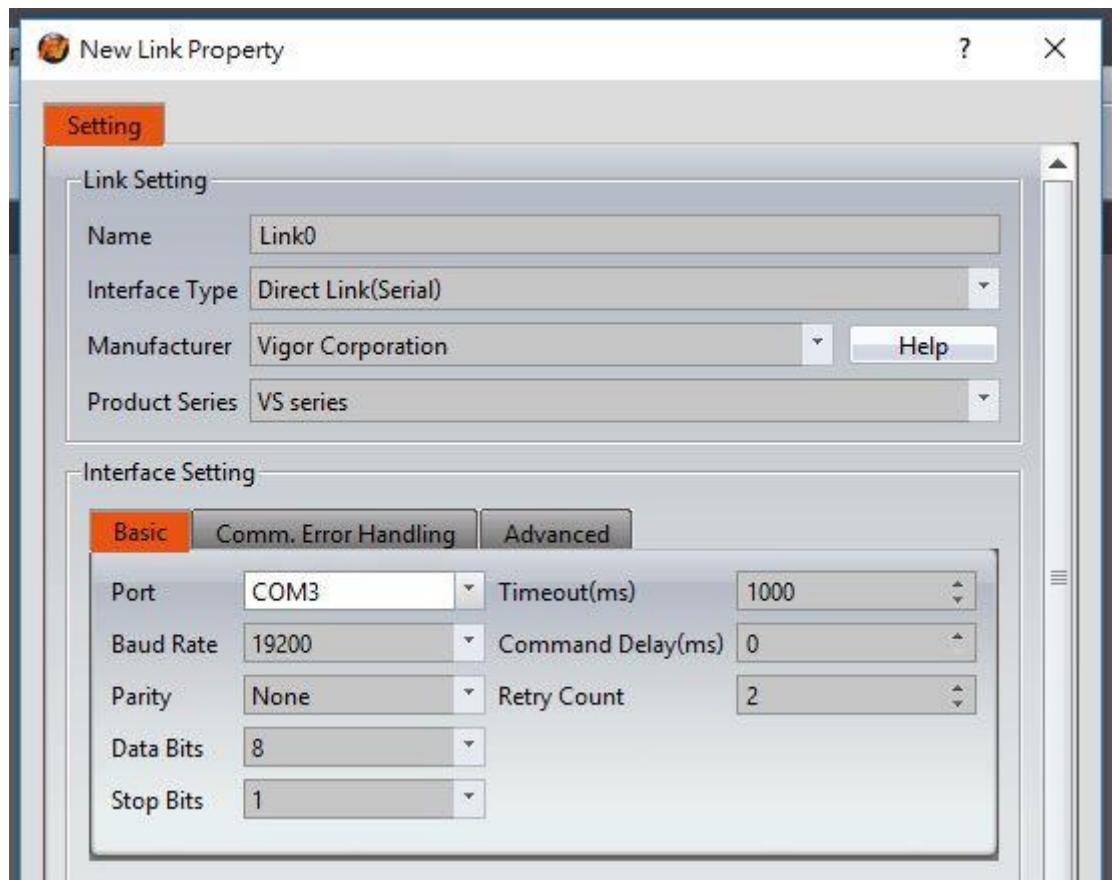

##### PLC Setting

Open Ladder Master and use the Vigor VBUSB-200 cable to connect to the computer USB port, it will automatically connect.

(Note: Mini-USB cable is required for programming, RS-485 is required for connection with human machine)

**HMI Setting**

Within the Link configuration window in FvDesigner:

Under Interface Type select Serial

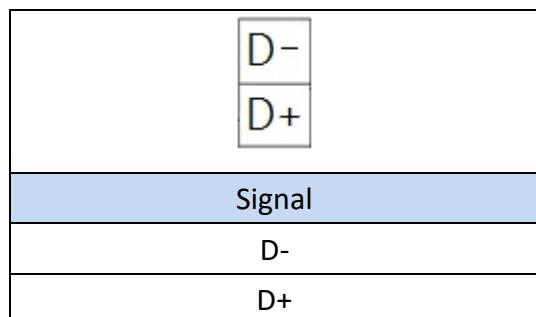

Under Manufacturer select Vigor Corporation

Under Product Series select VS Series

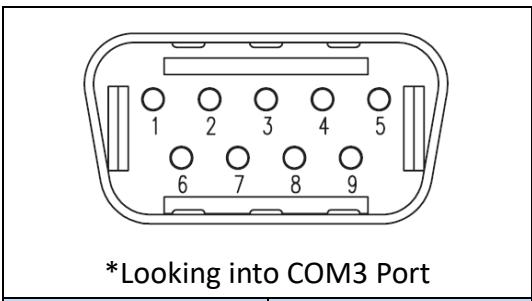

Under Port select required COM port. Verify the baud rate is the same as the value set on the PLC.
